

# Afghanistan

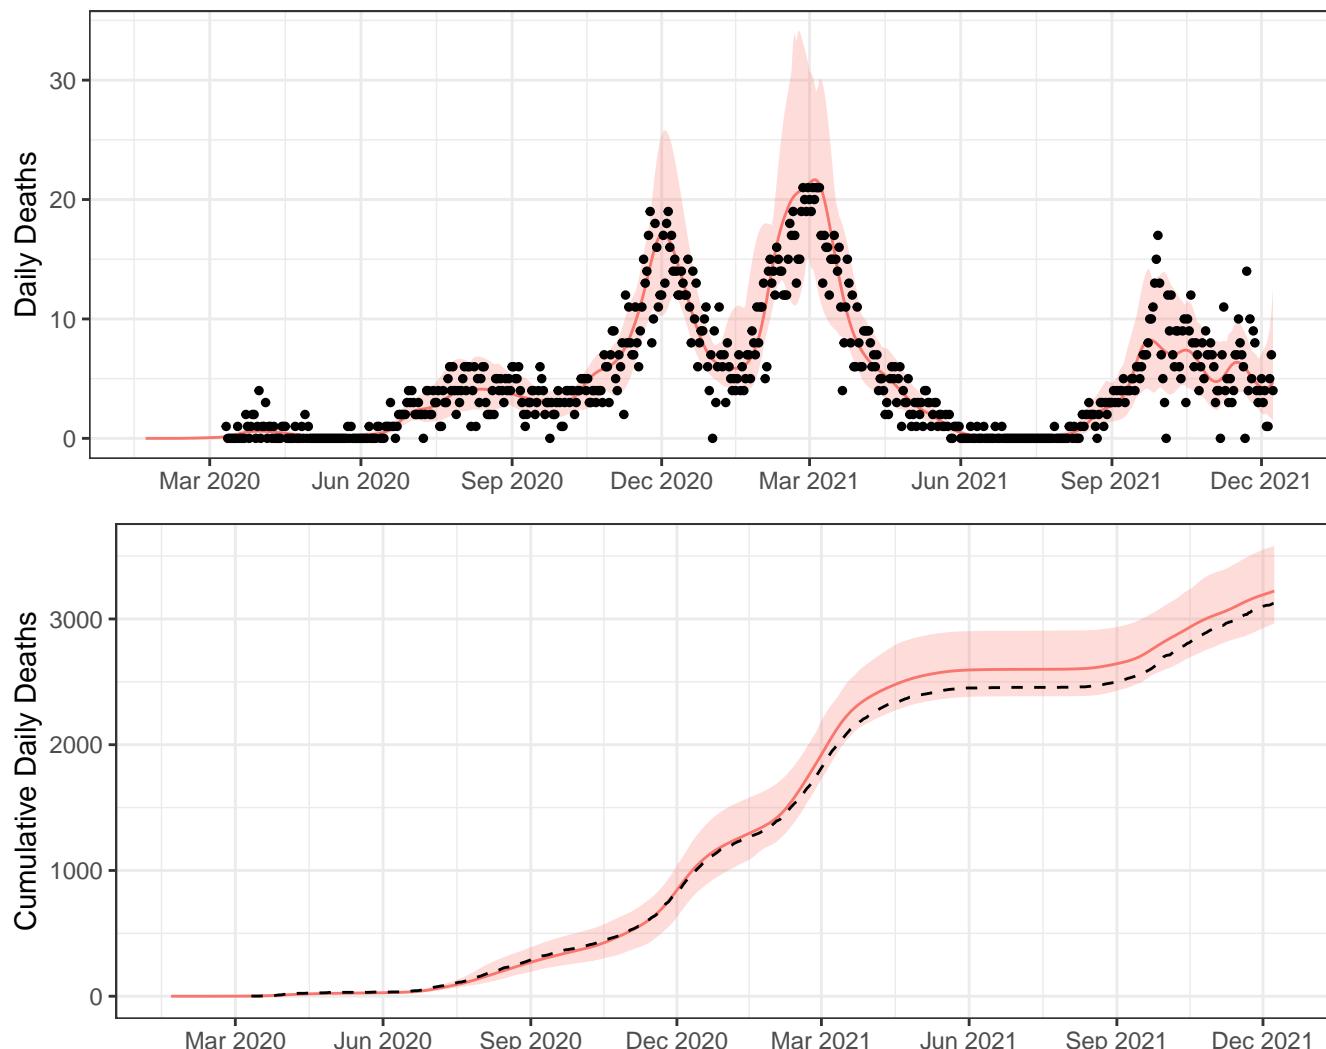

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Angola

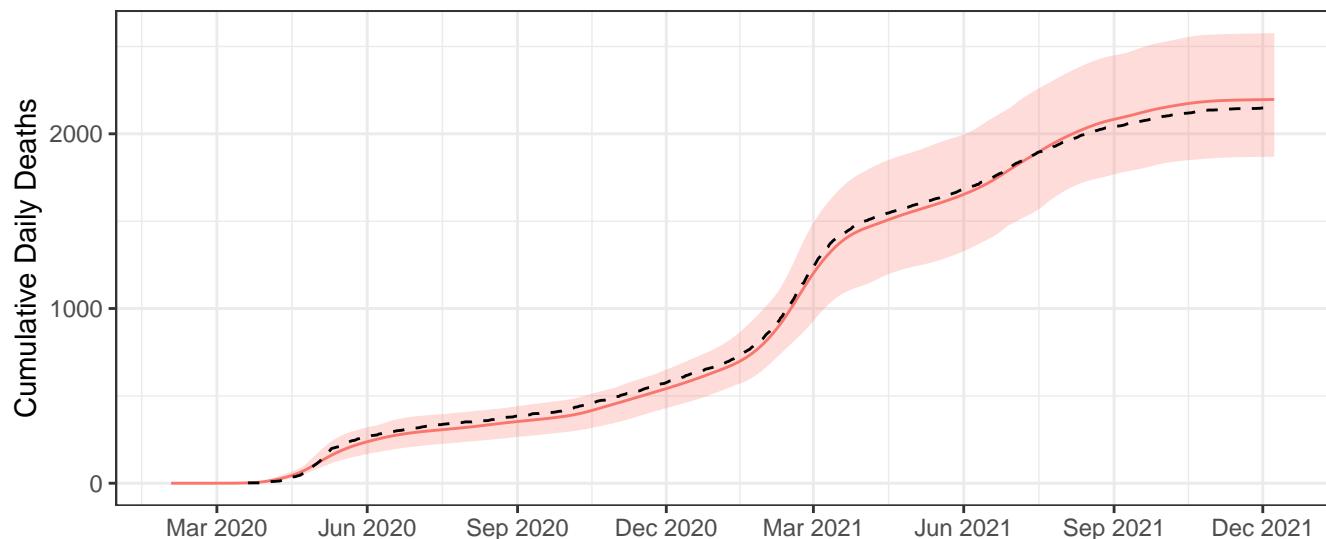

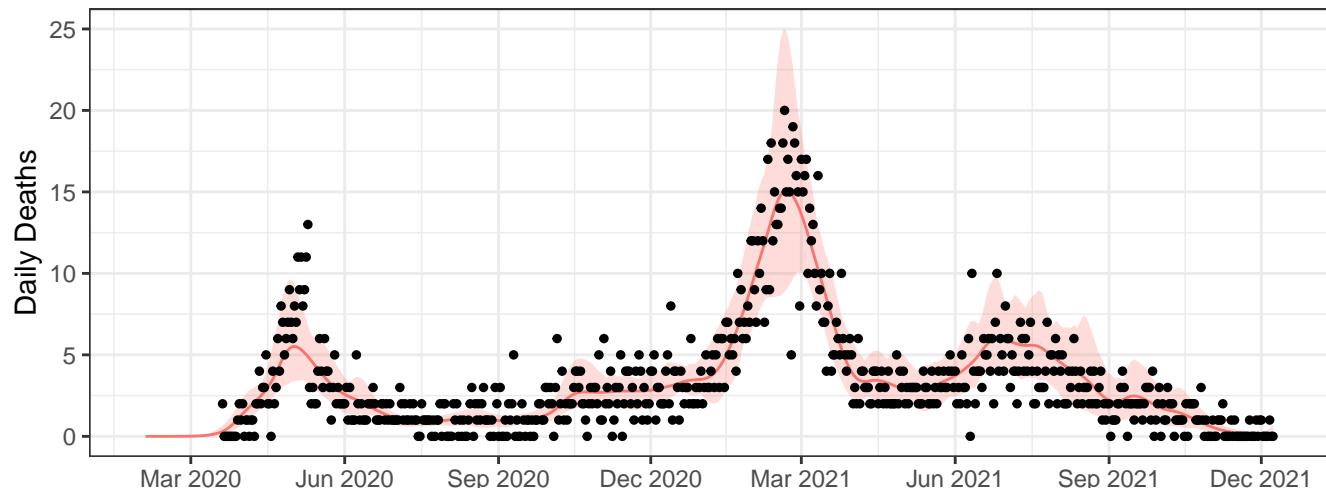

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Albania

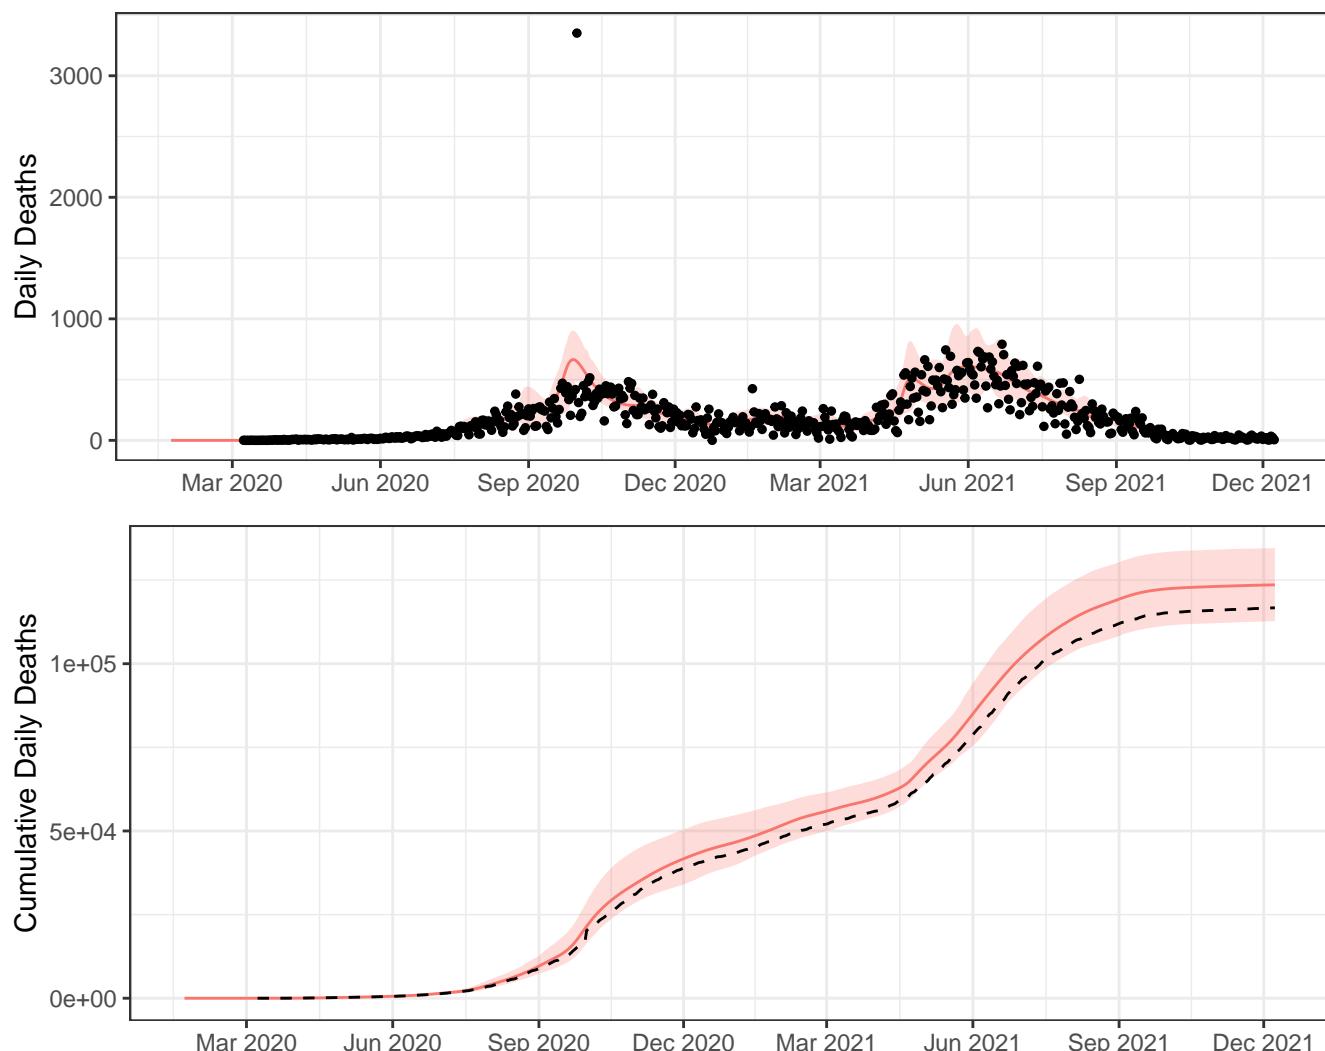

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# United Arab Emirates

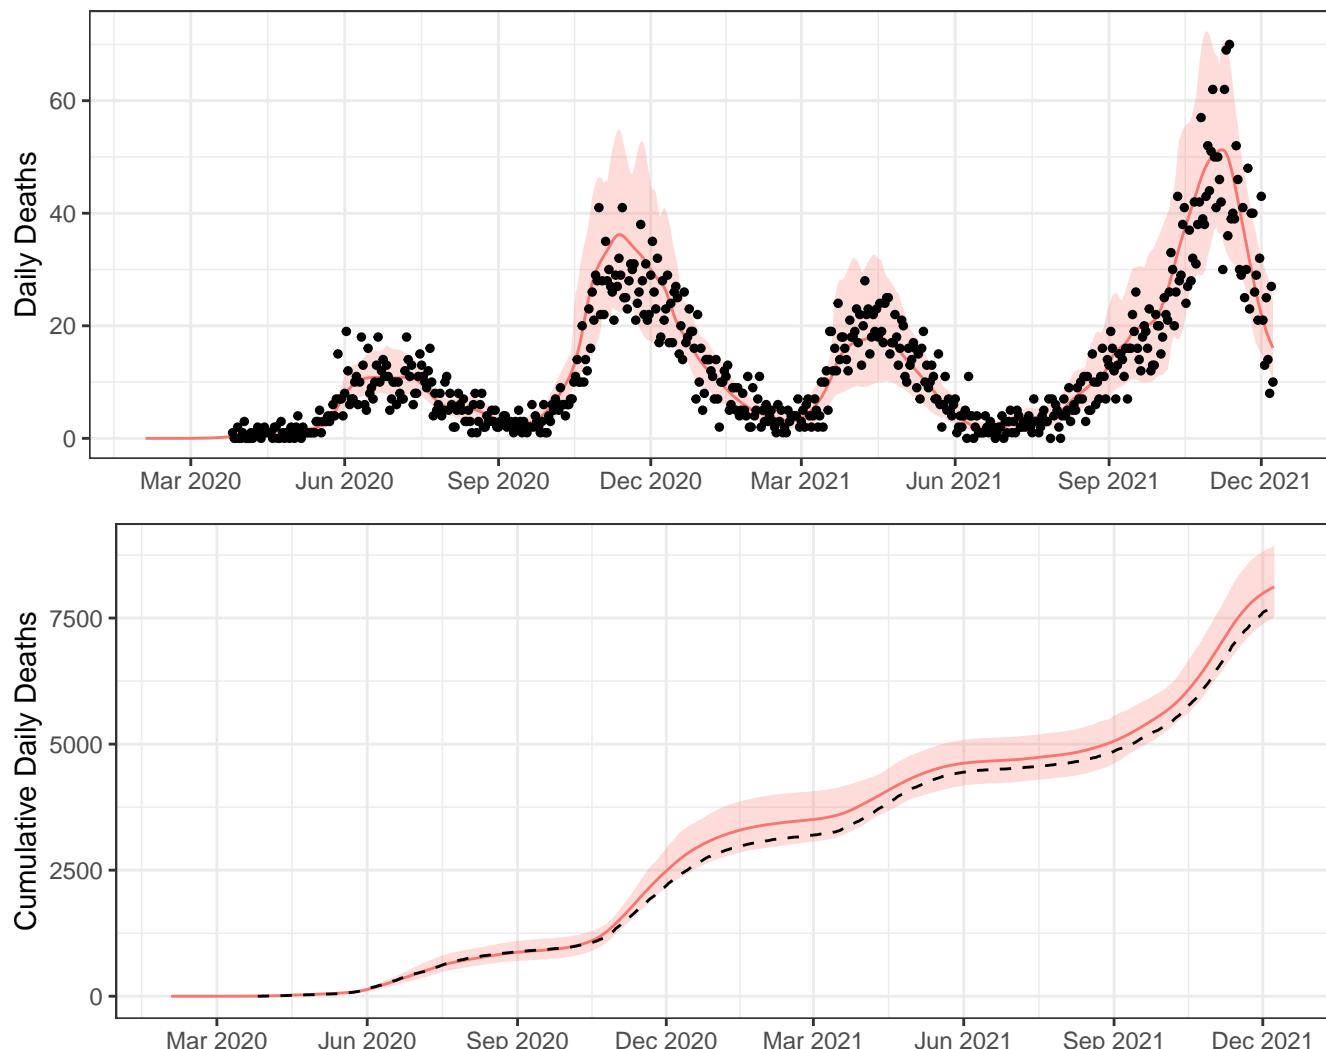

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Argentina

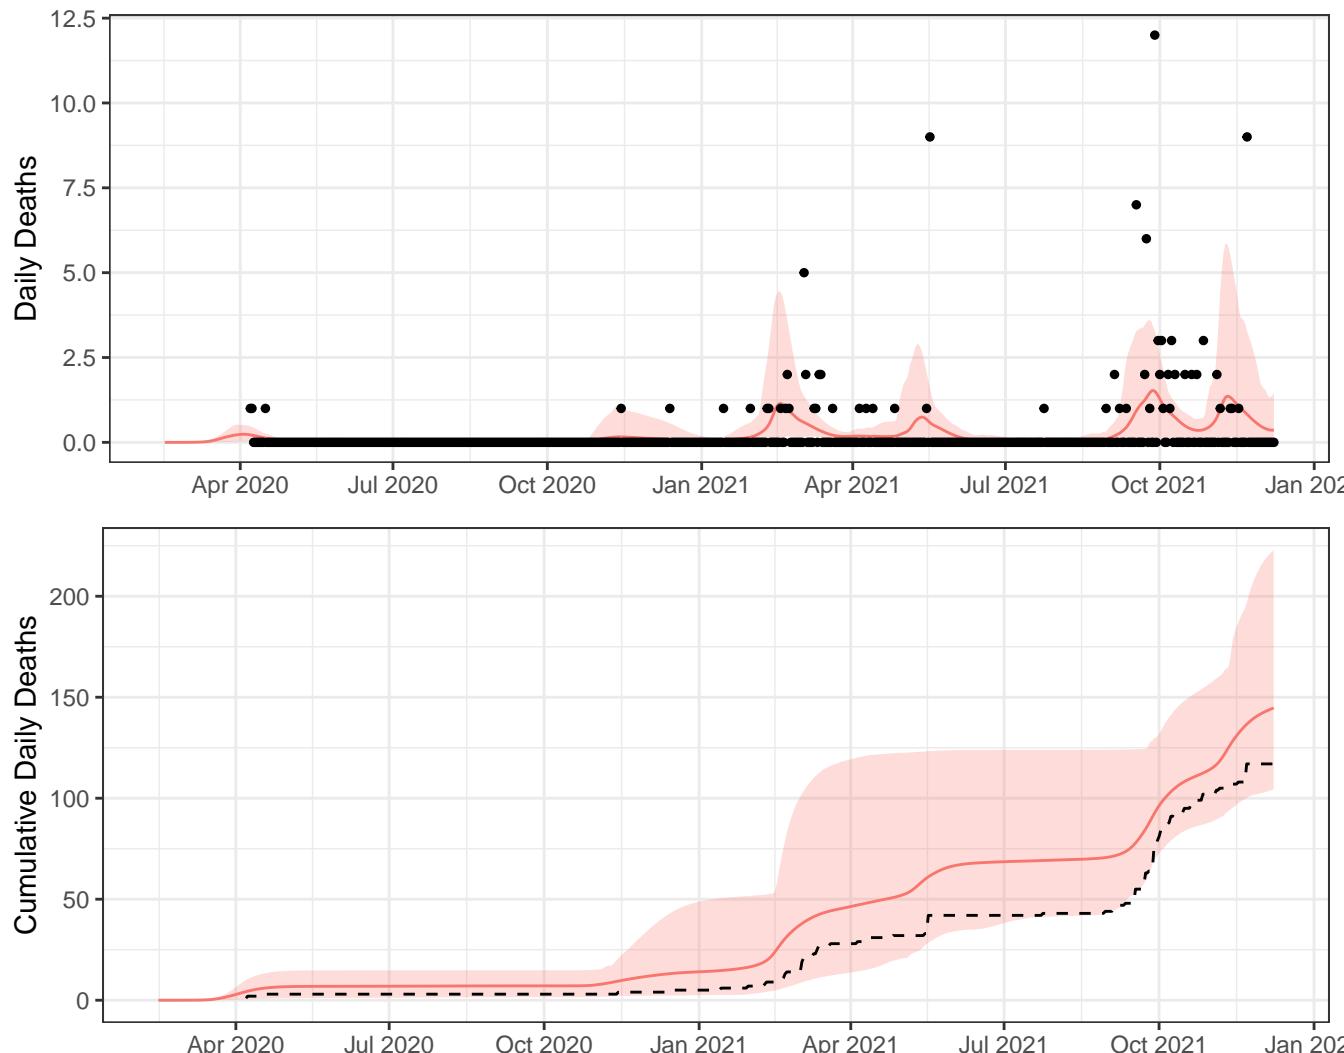

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Armenia

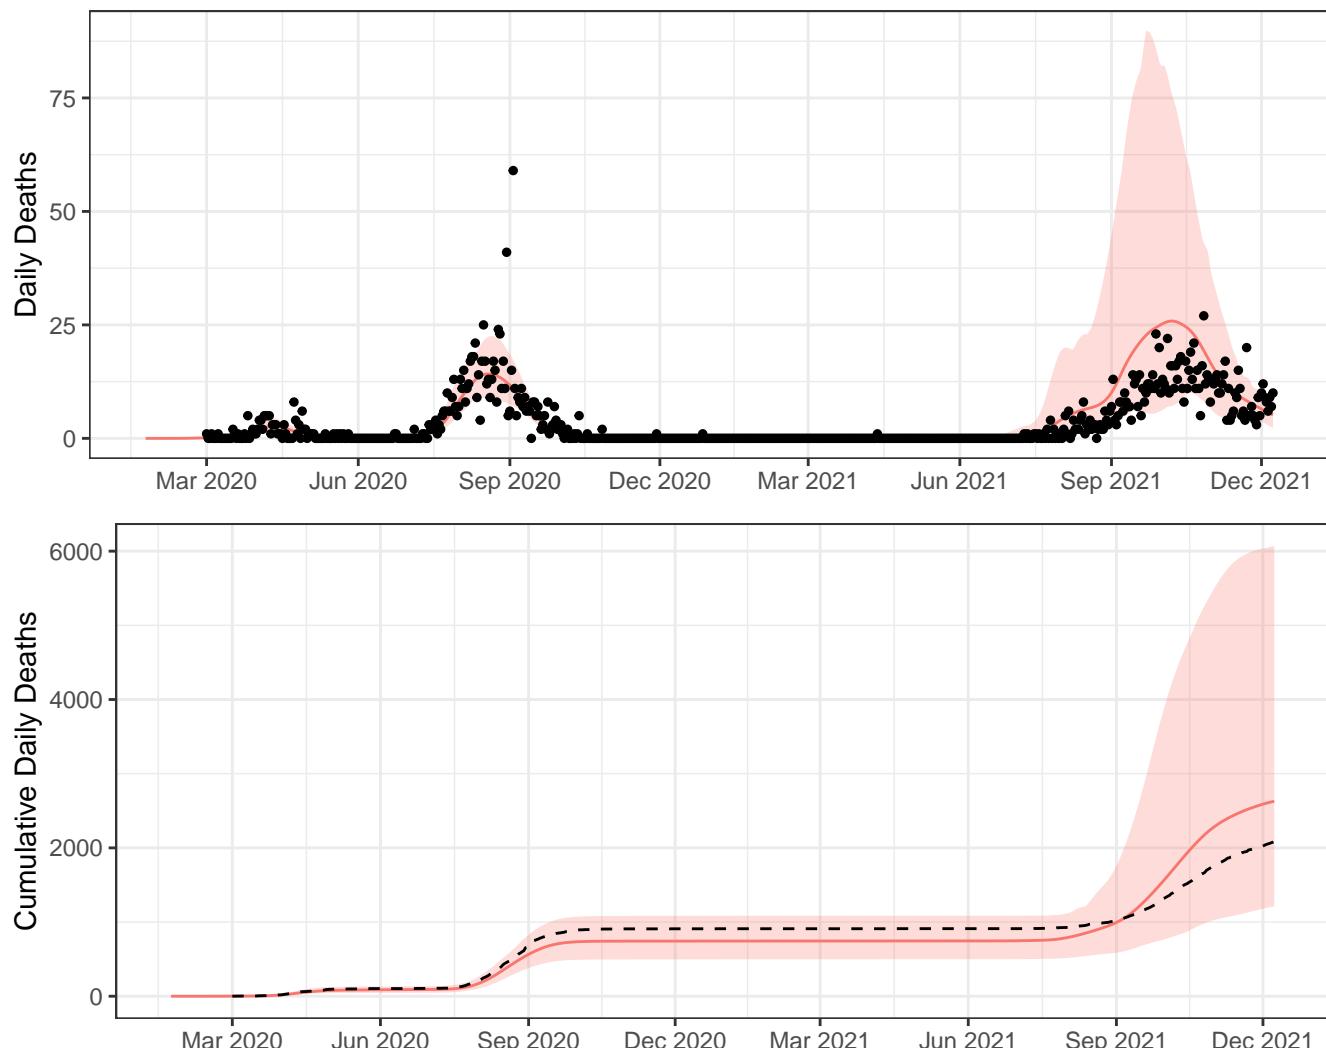

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Antigua and Barbuda

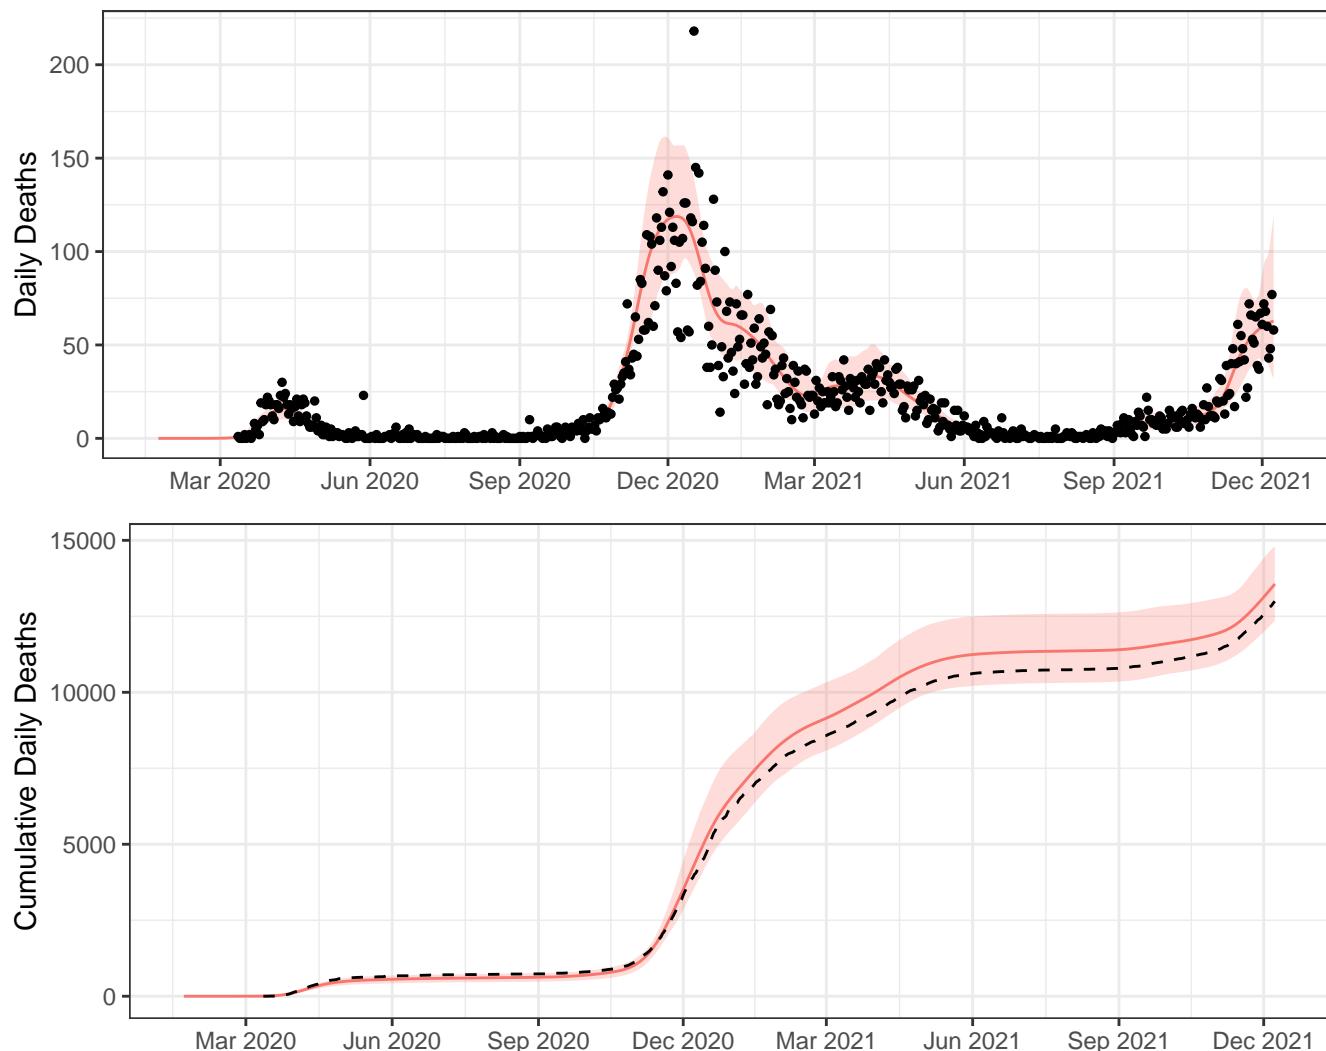

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Australia

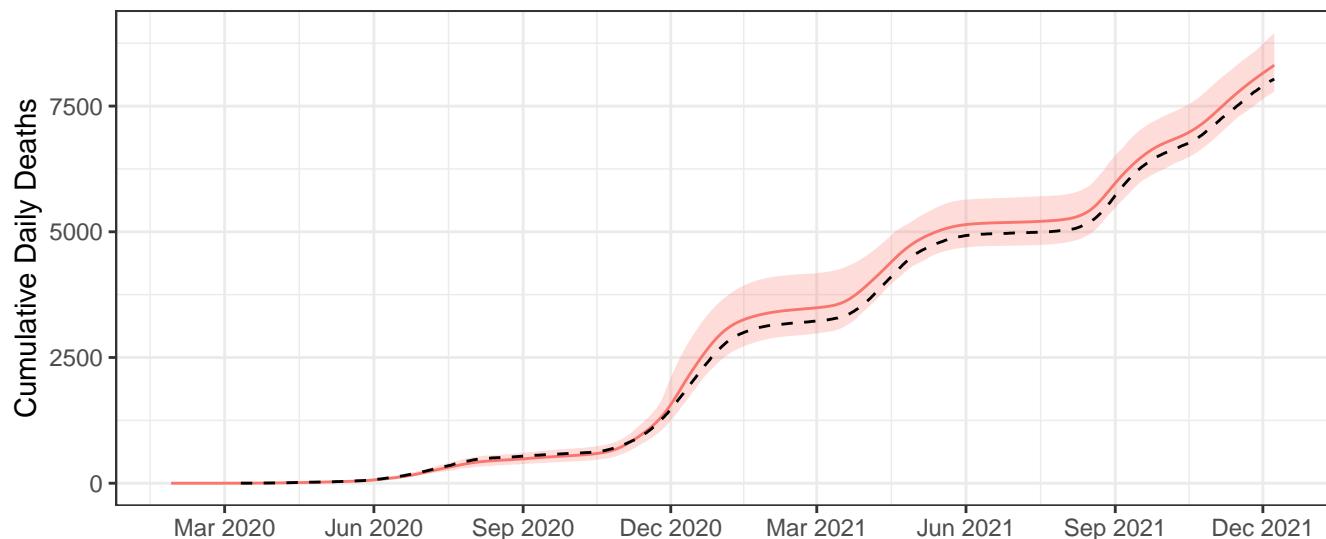

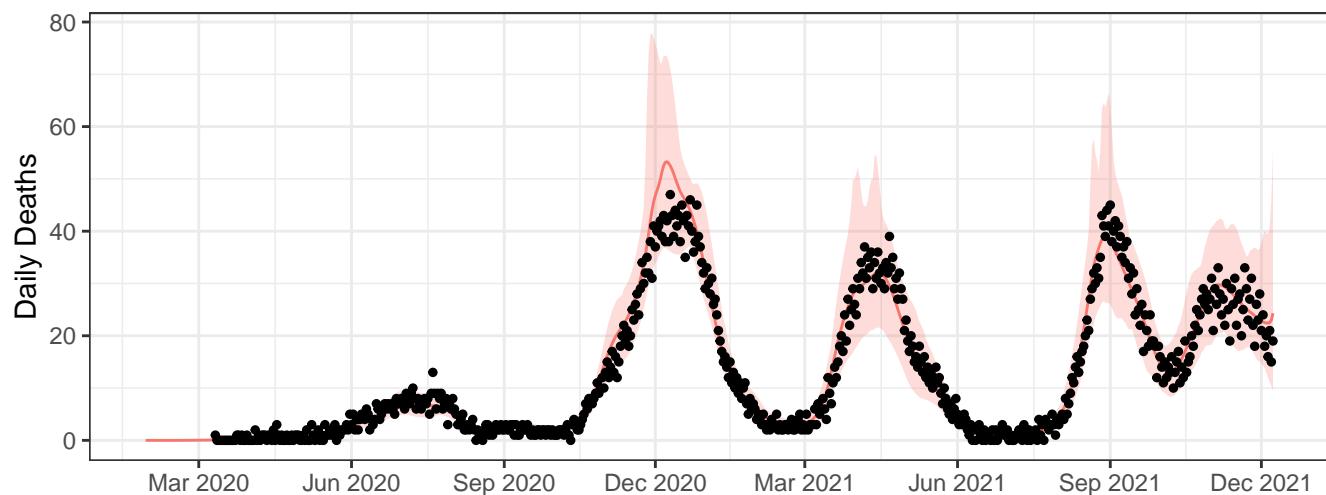

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Austria

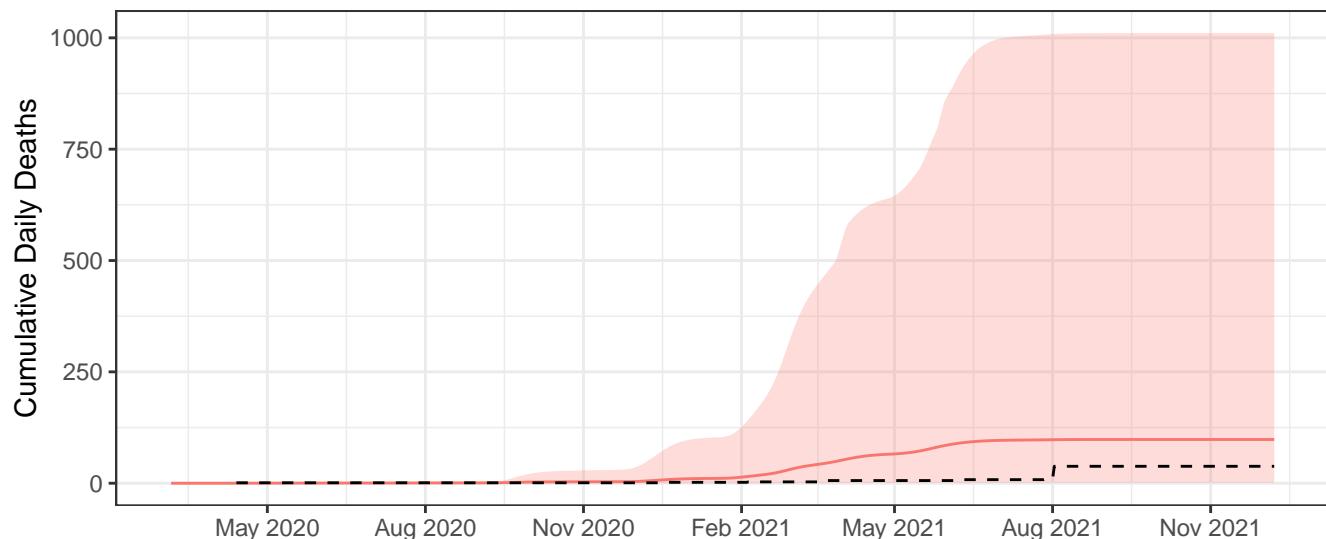

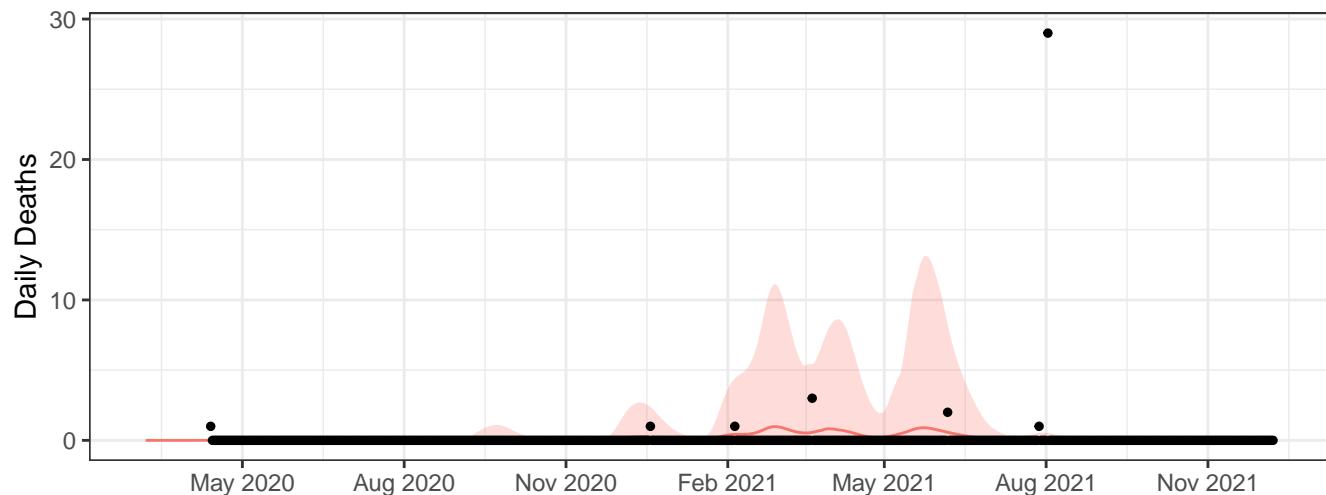

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Azerbaijan

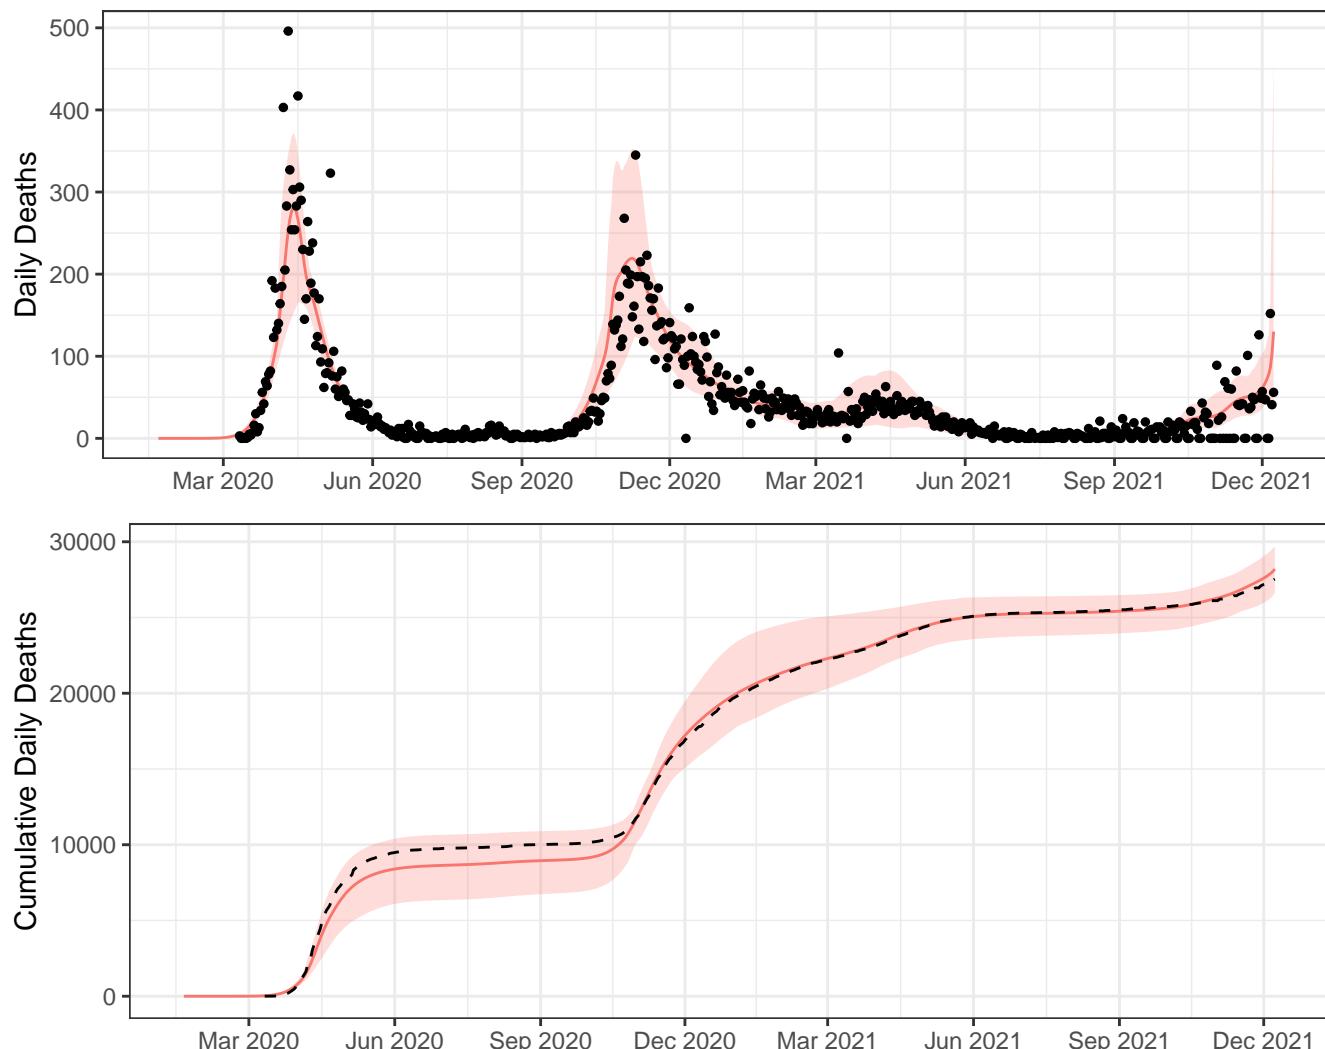

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Burundi

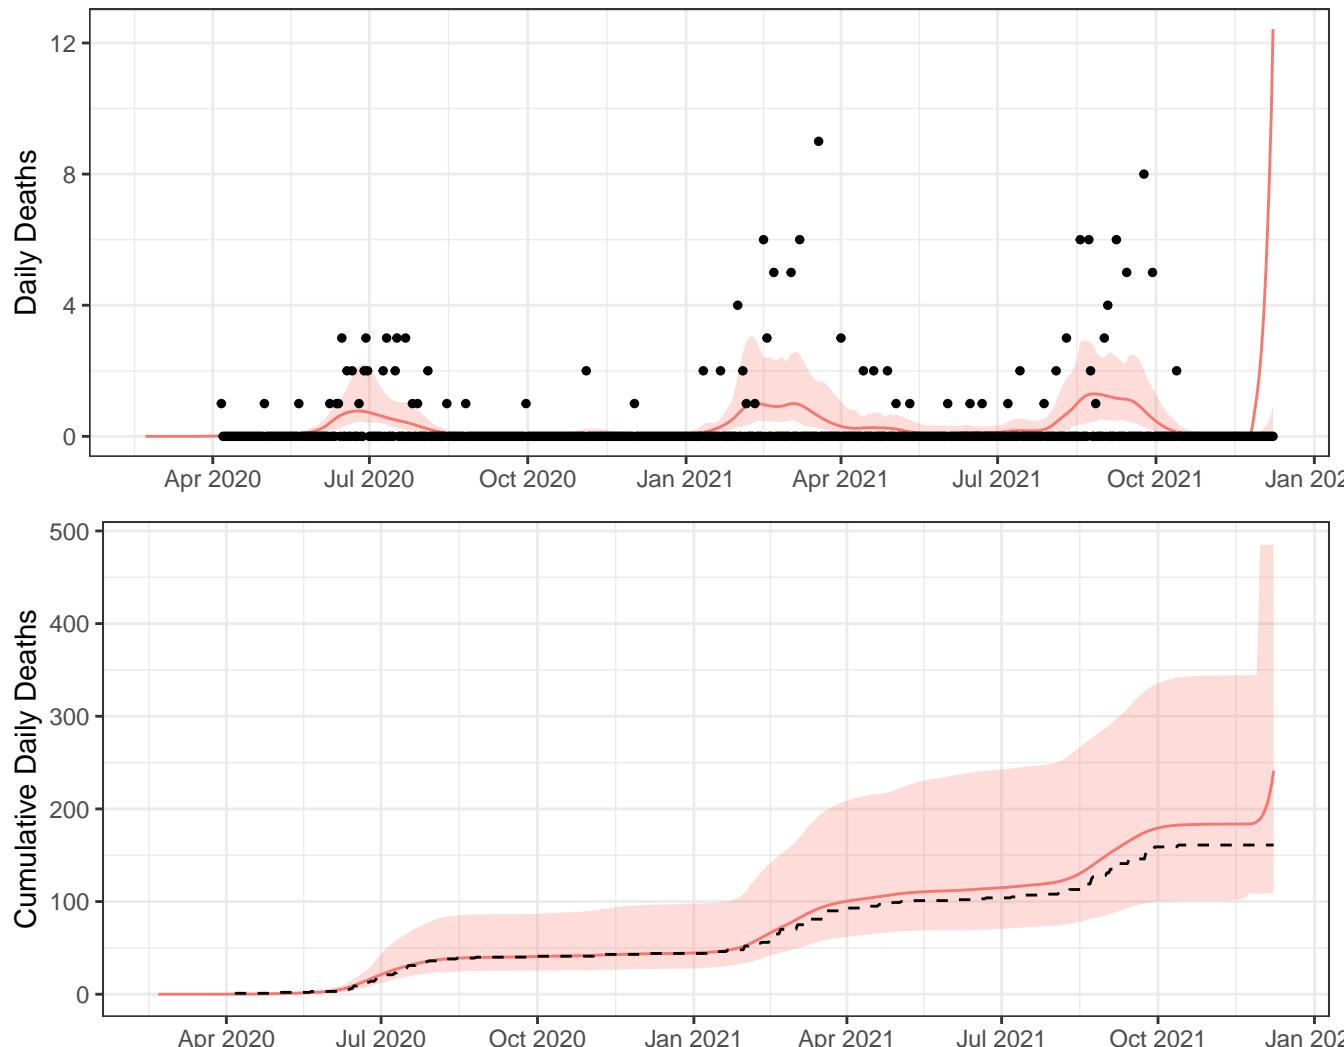

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Belgium

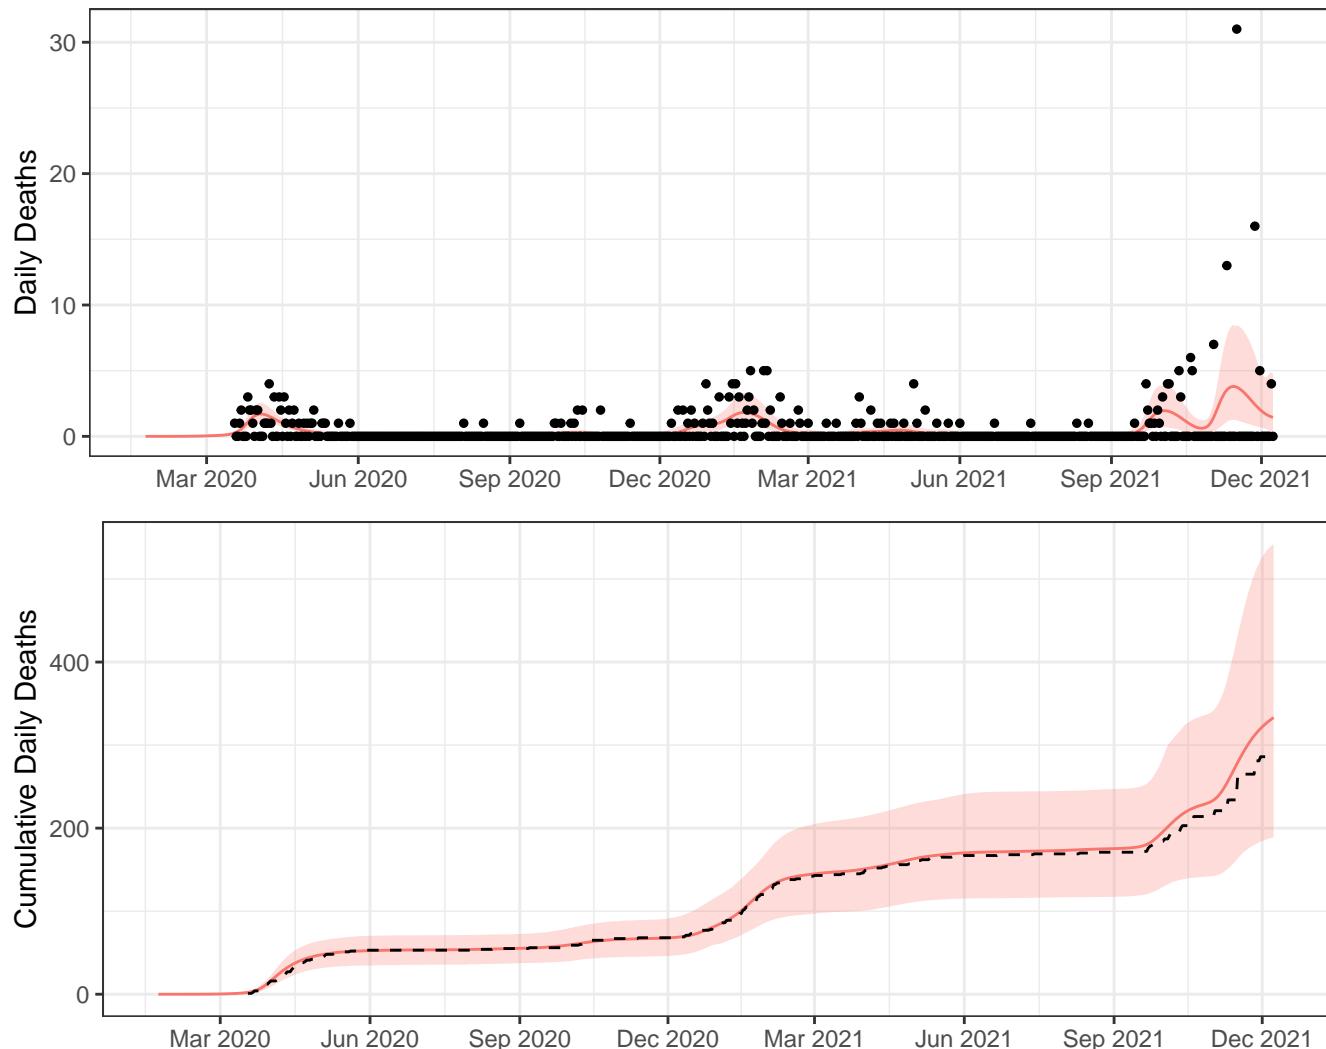

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Benin

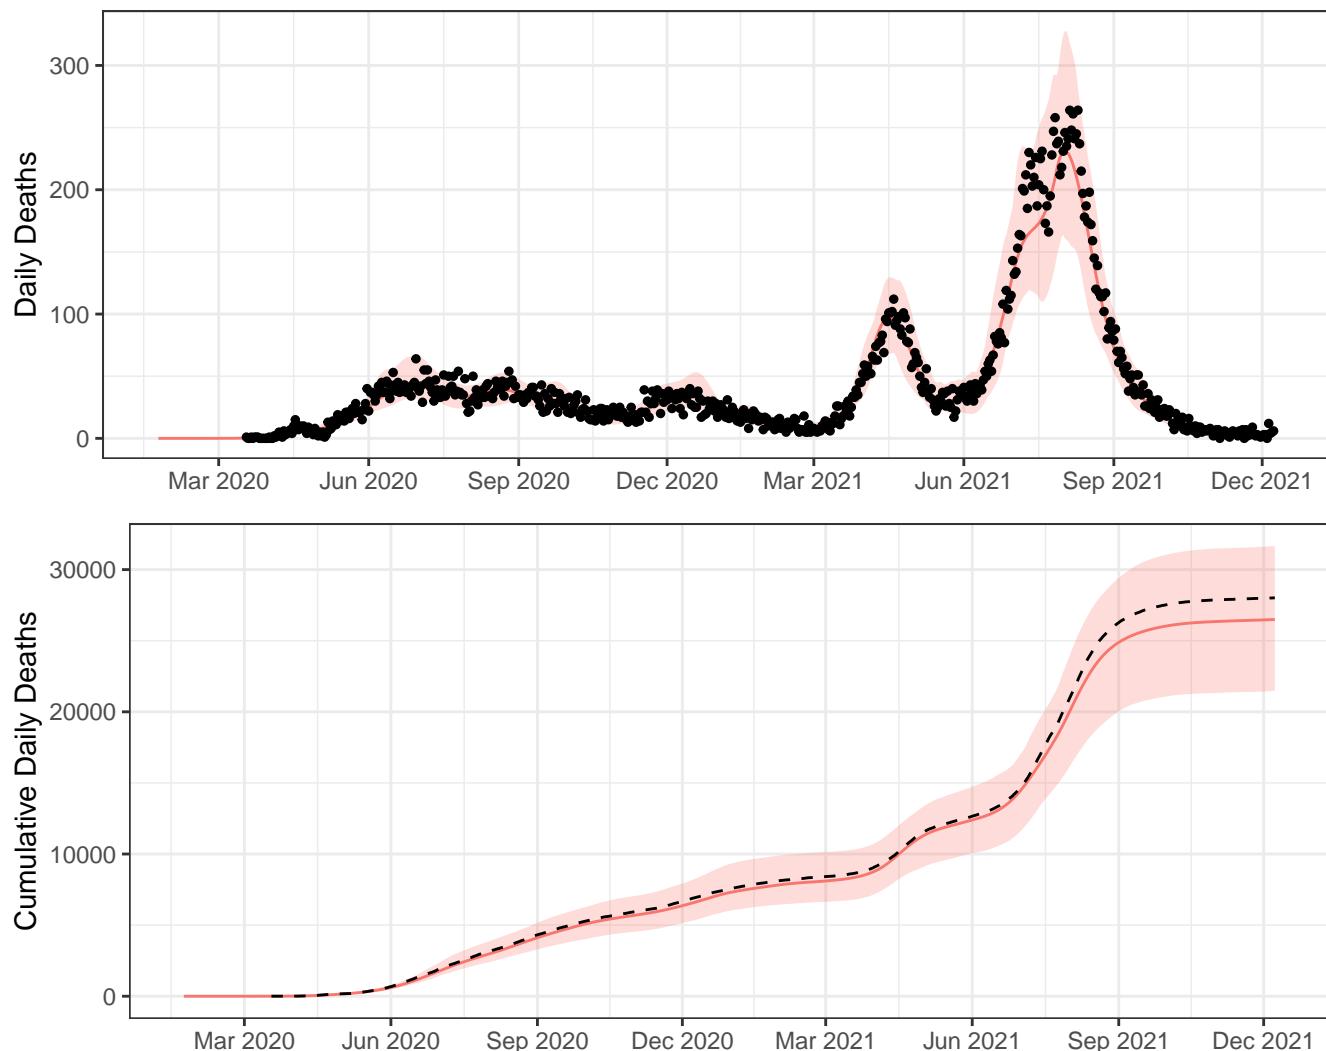

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Burkina Faso

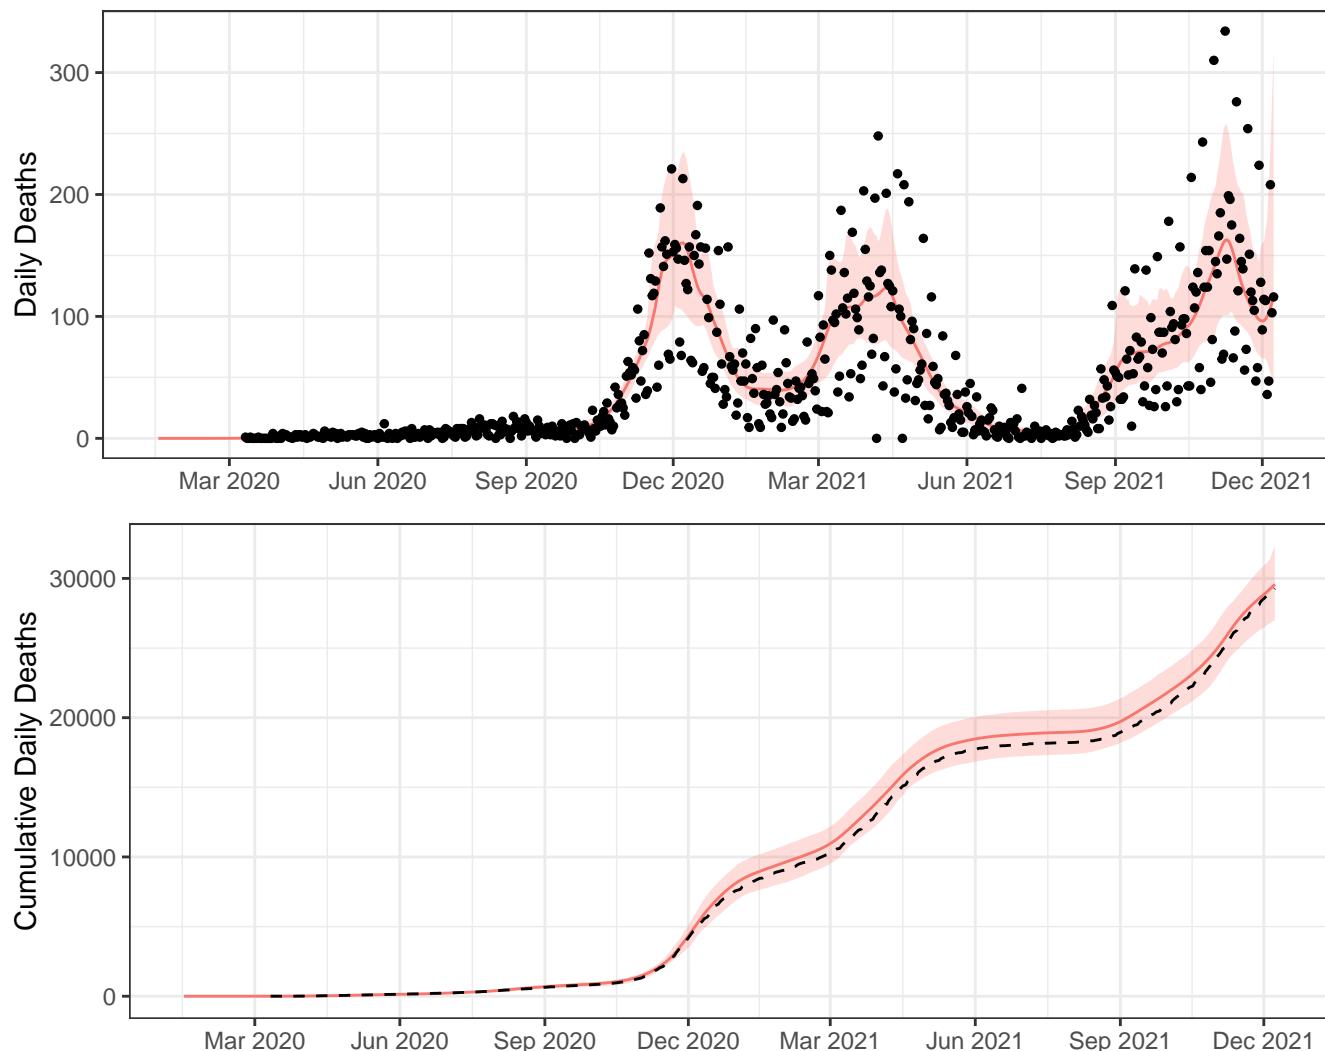

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bangladesh

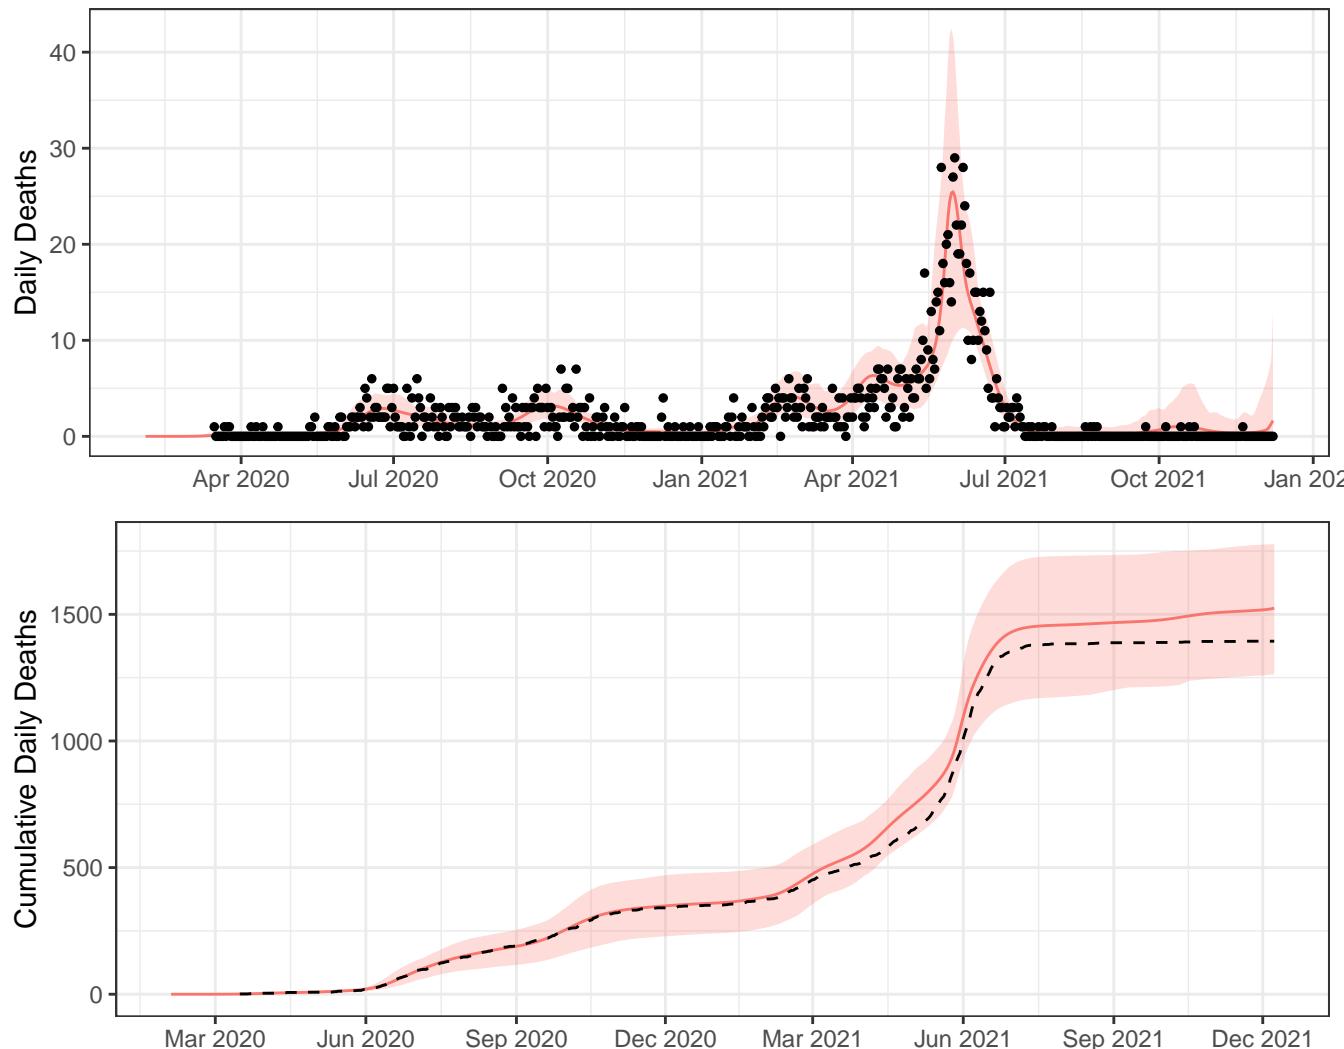

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bulgaria

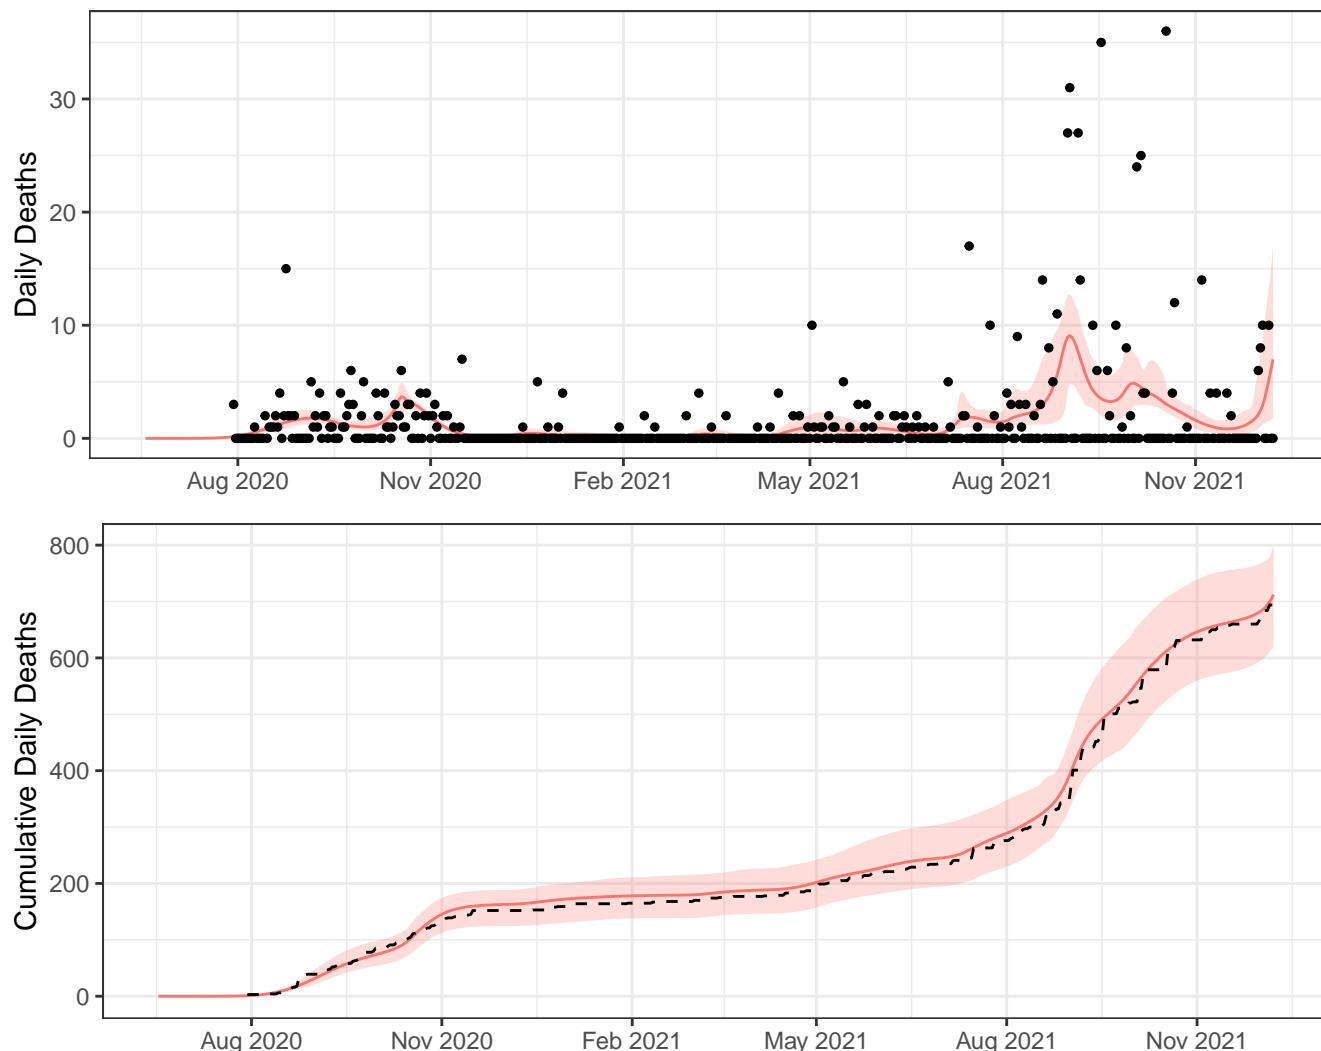

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bahrain

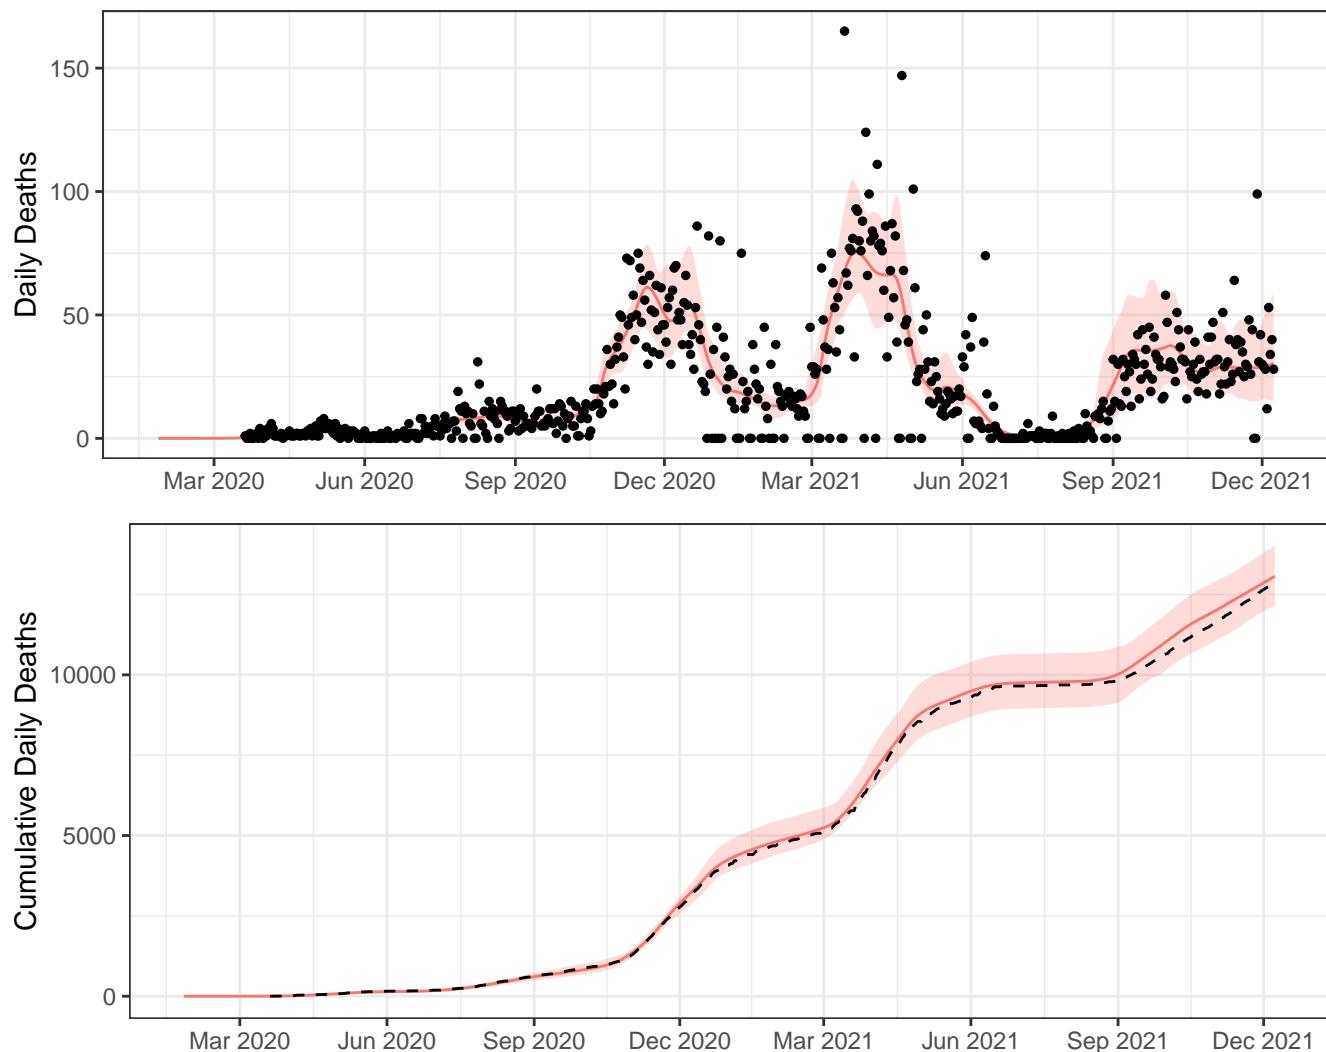

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bahamas

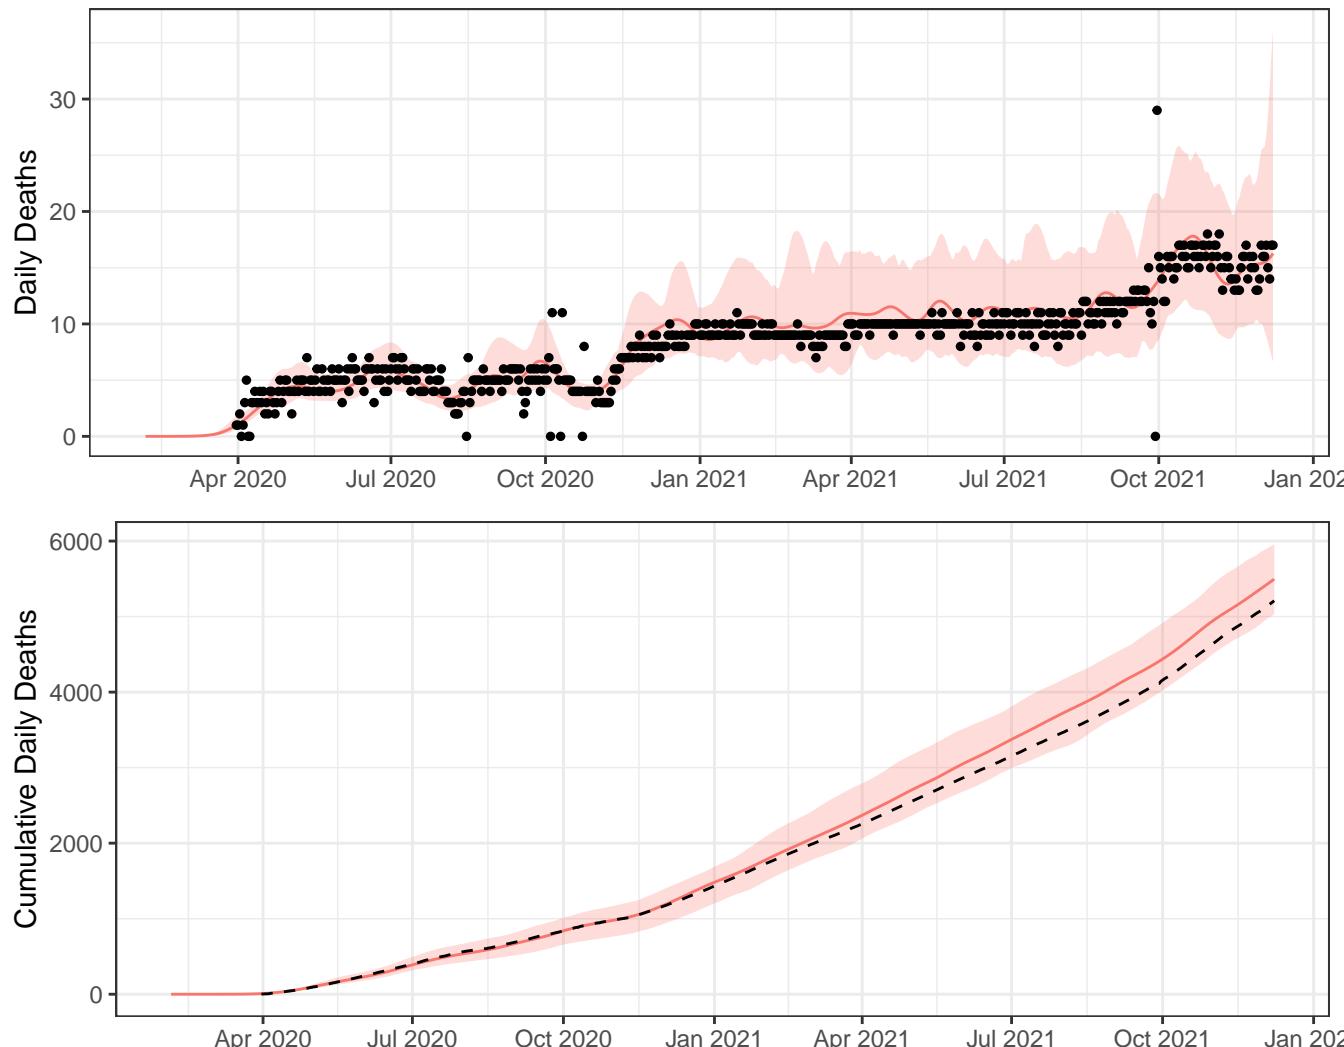

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bosnia and Herzegovina

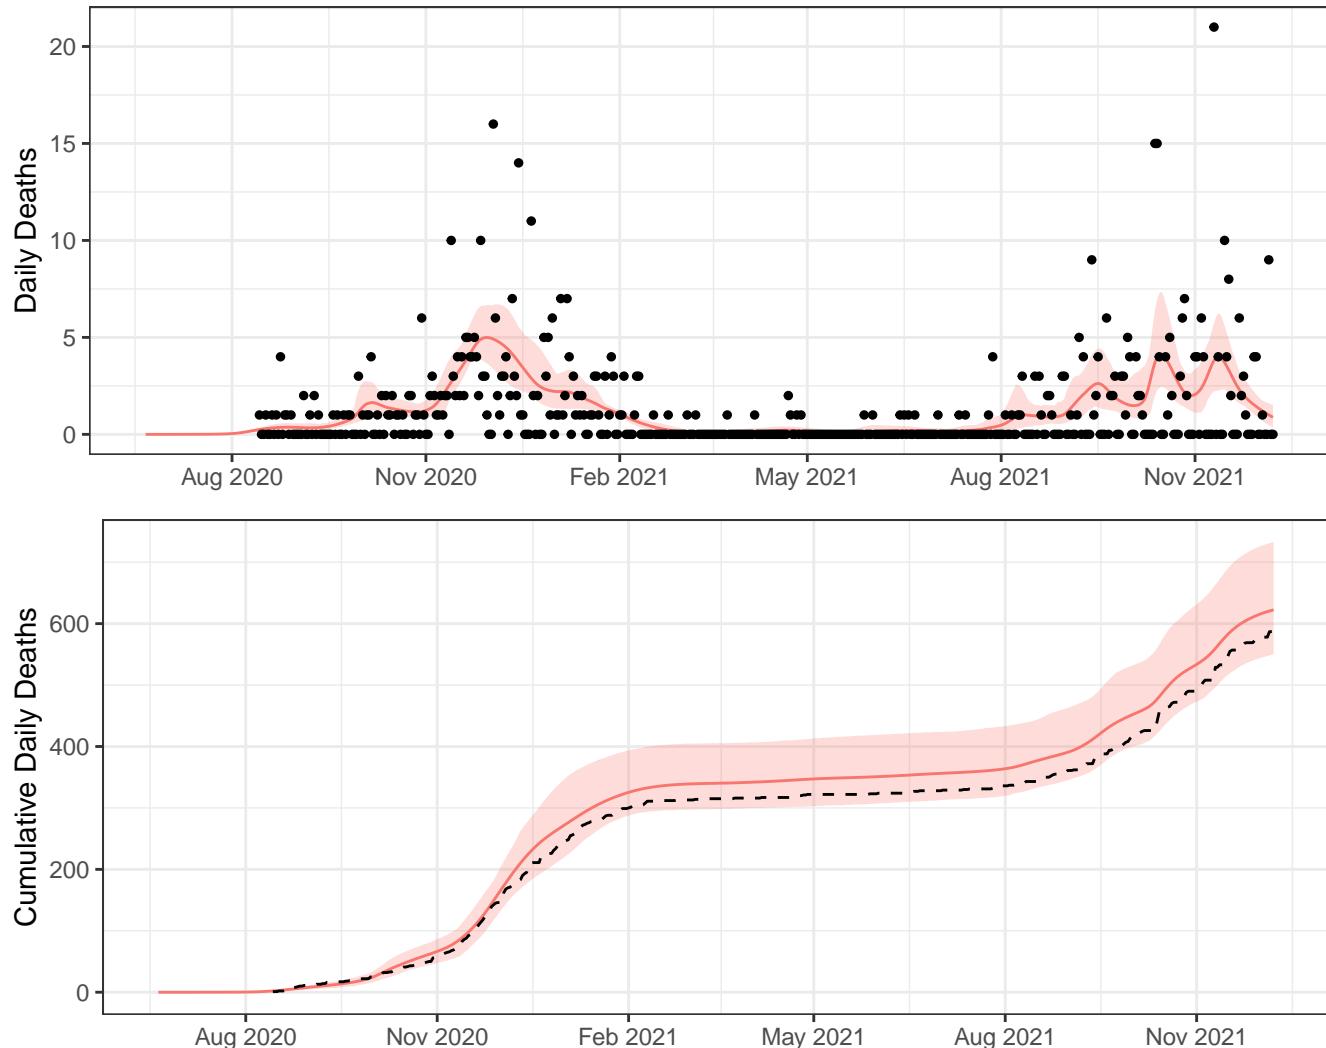

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Belarus

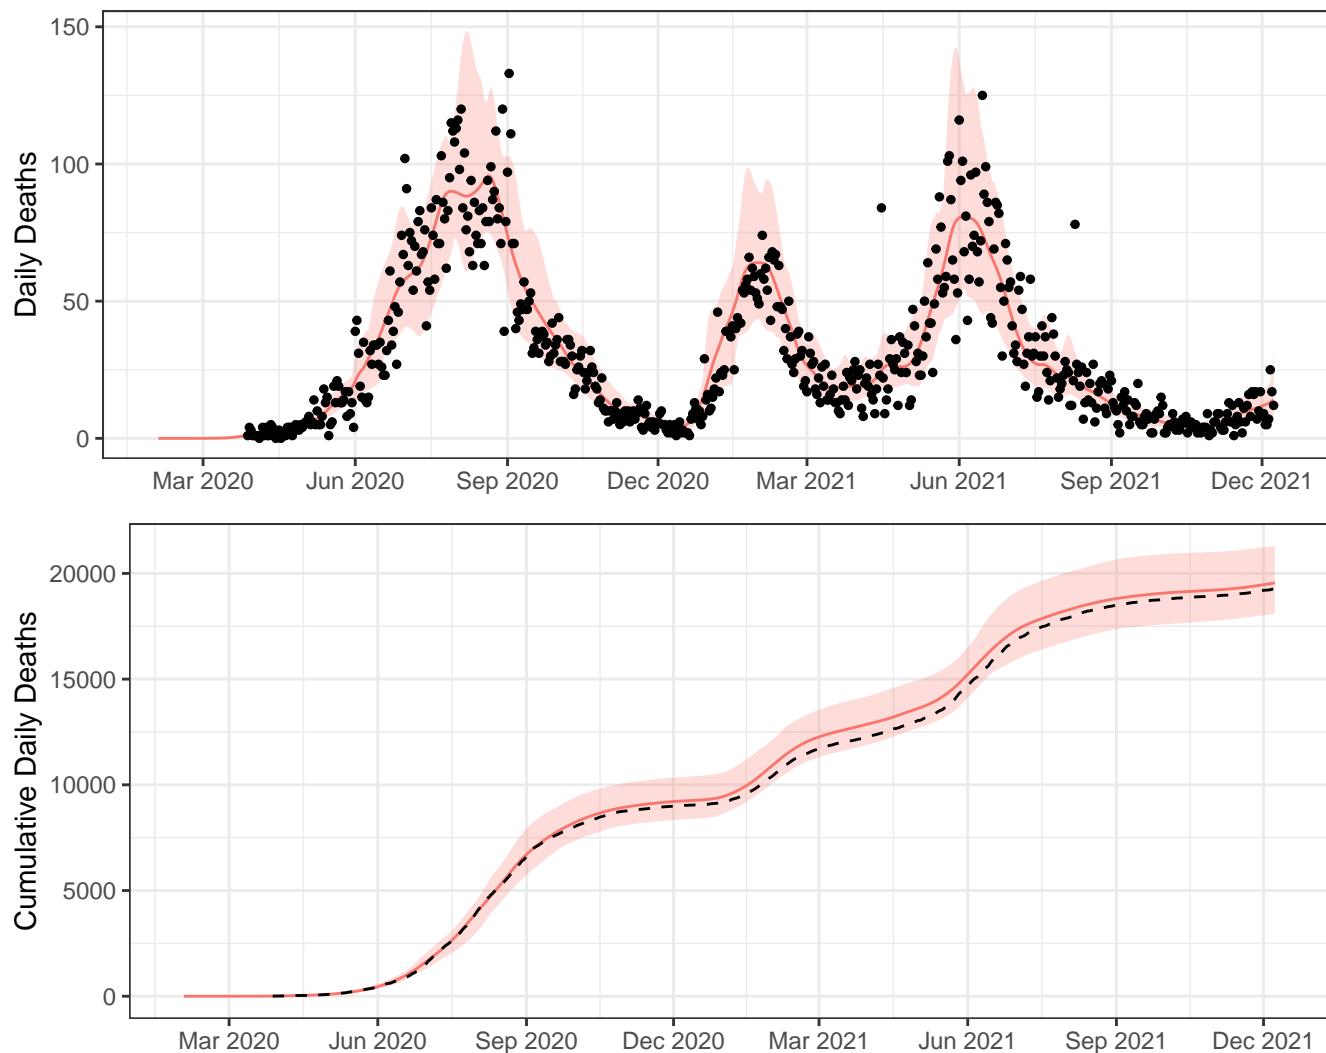

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Belize

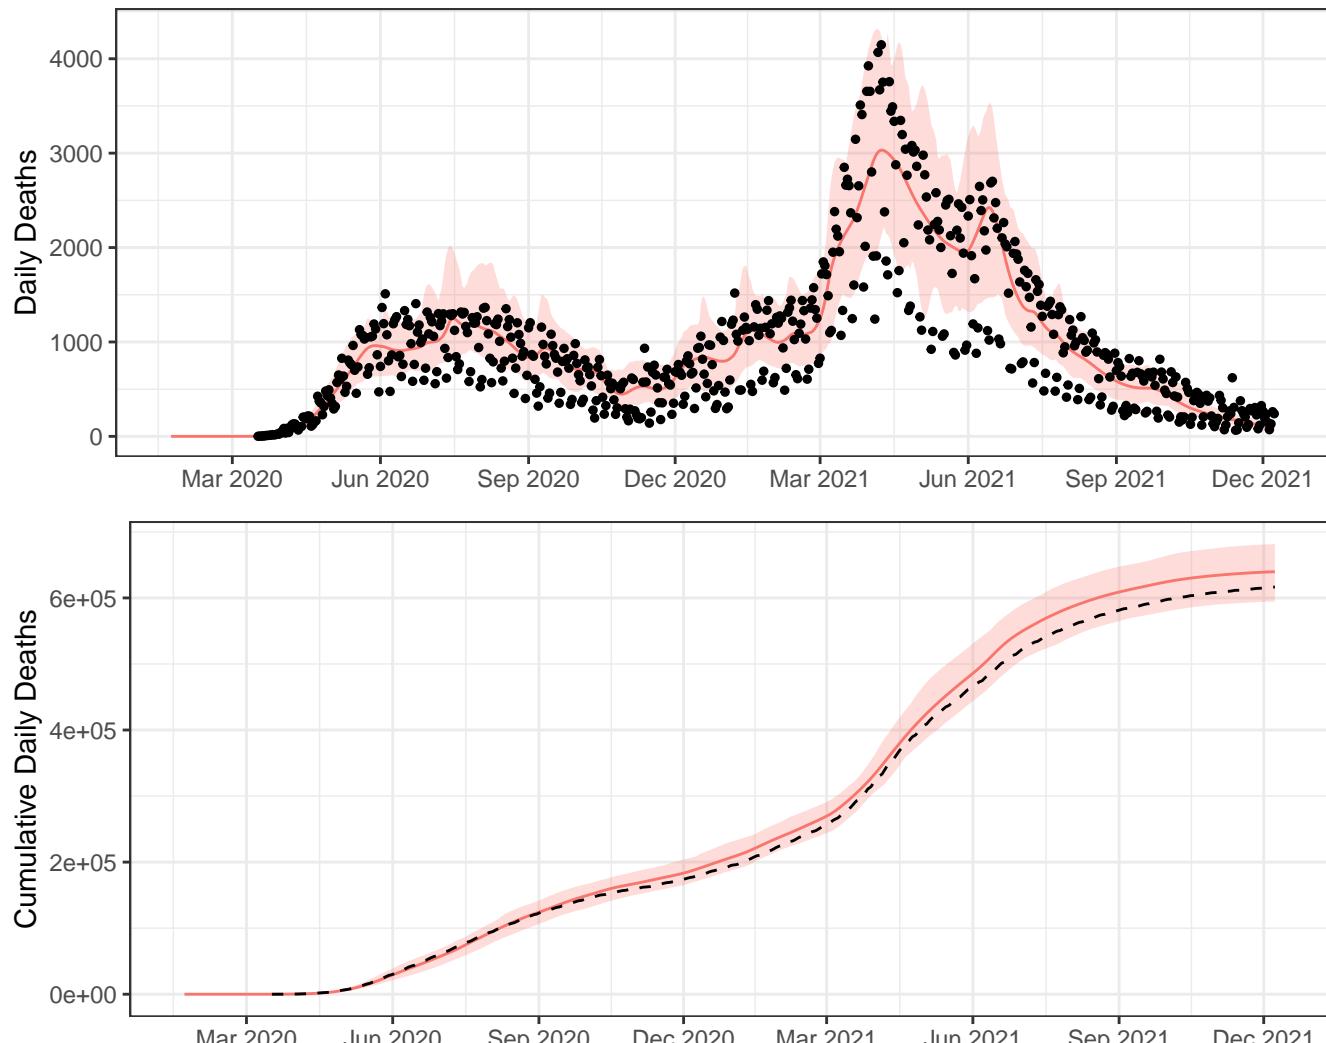

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bolivia

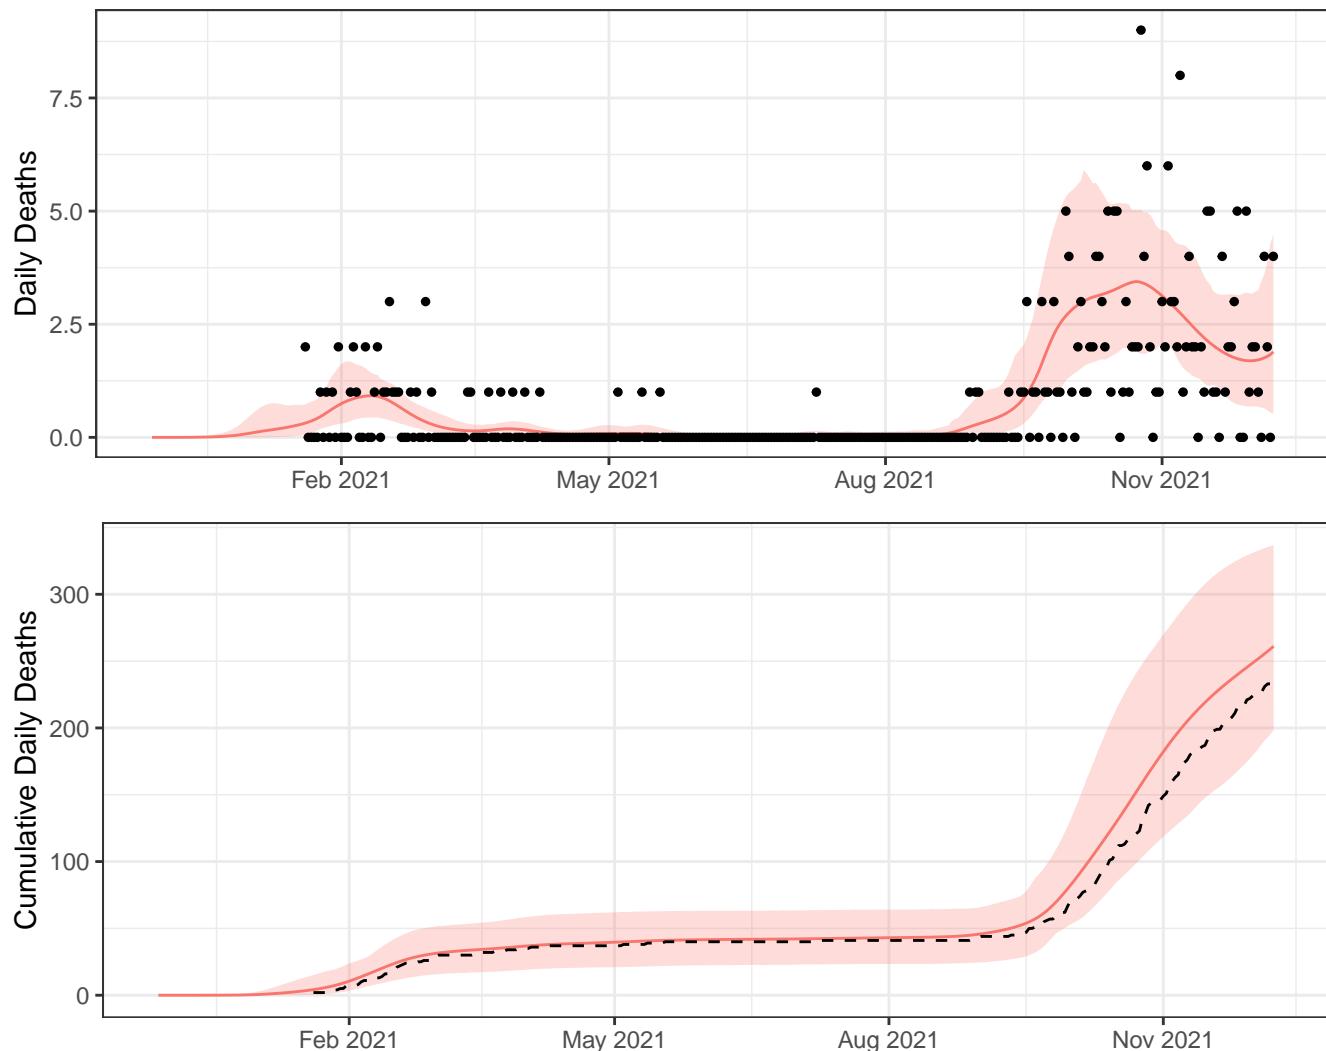

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Brazil

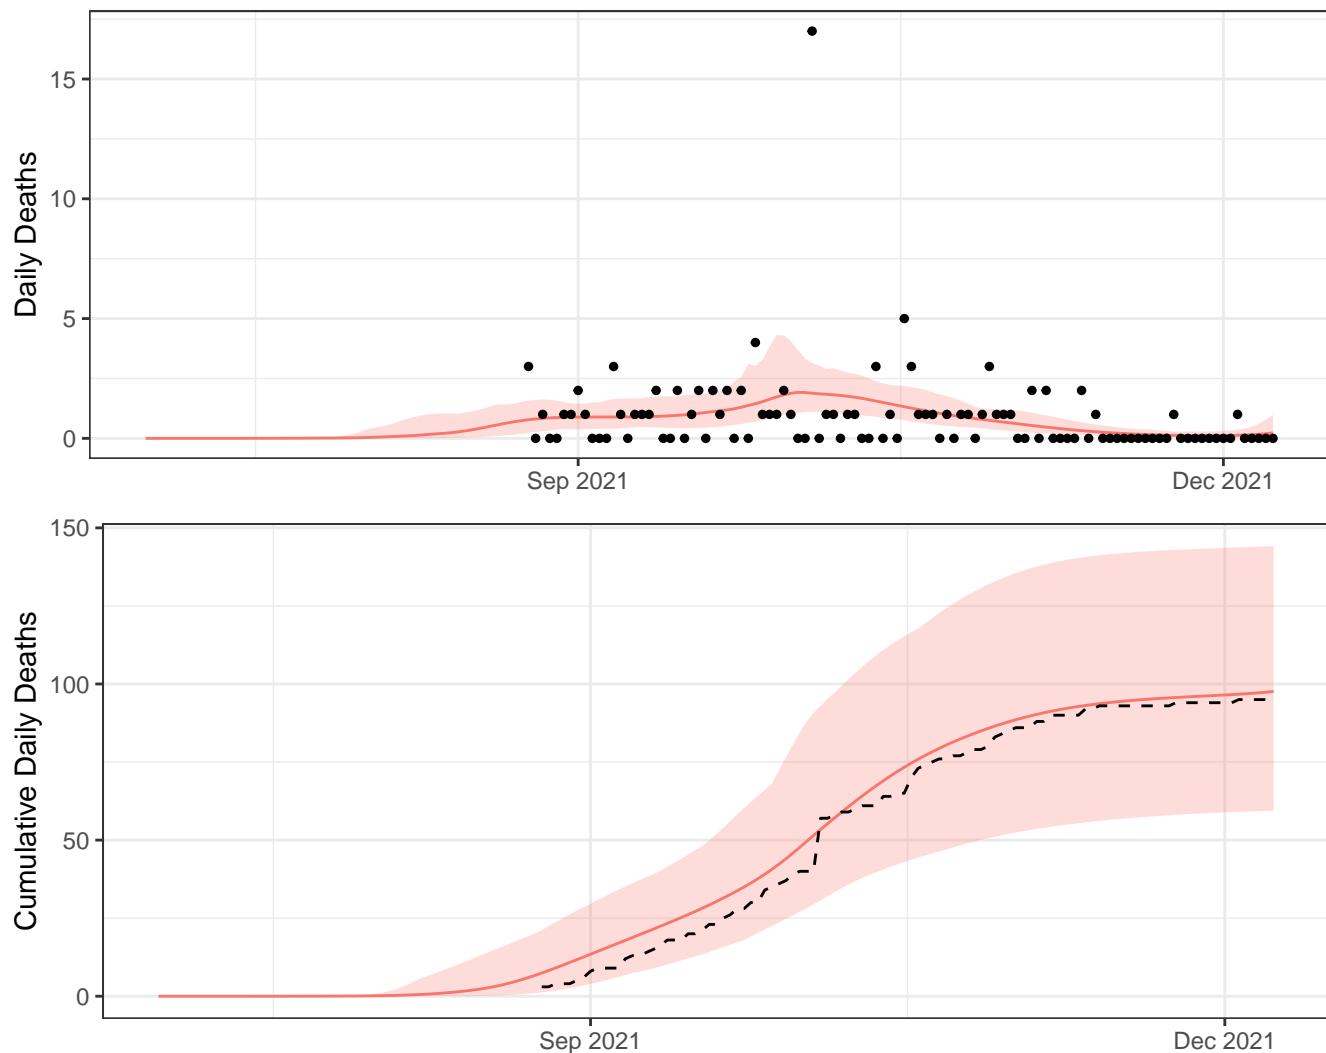

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Barbados

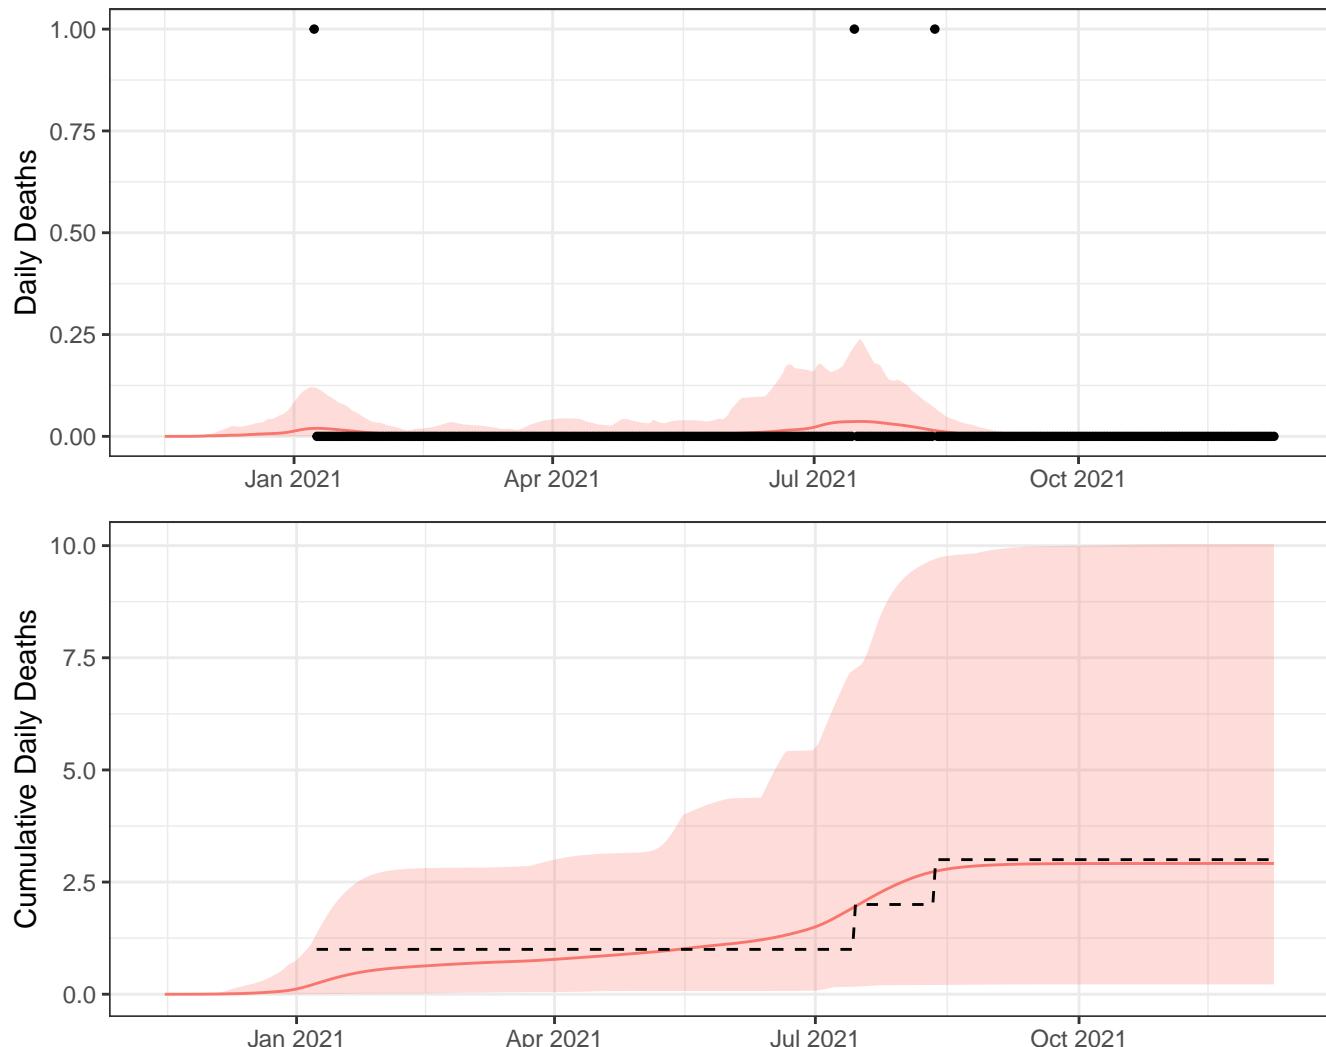

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Brunei Darussalam

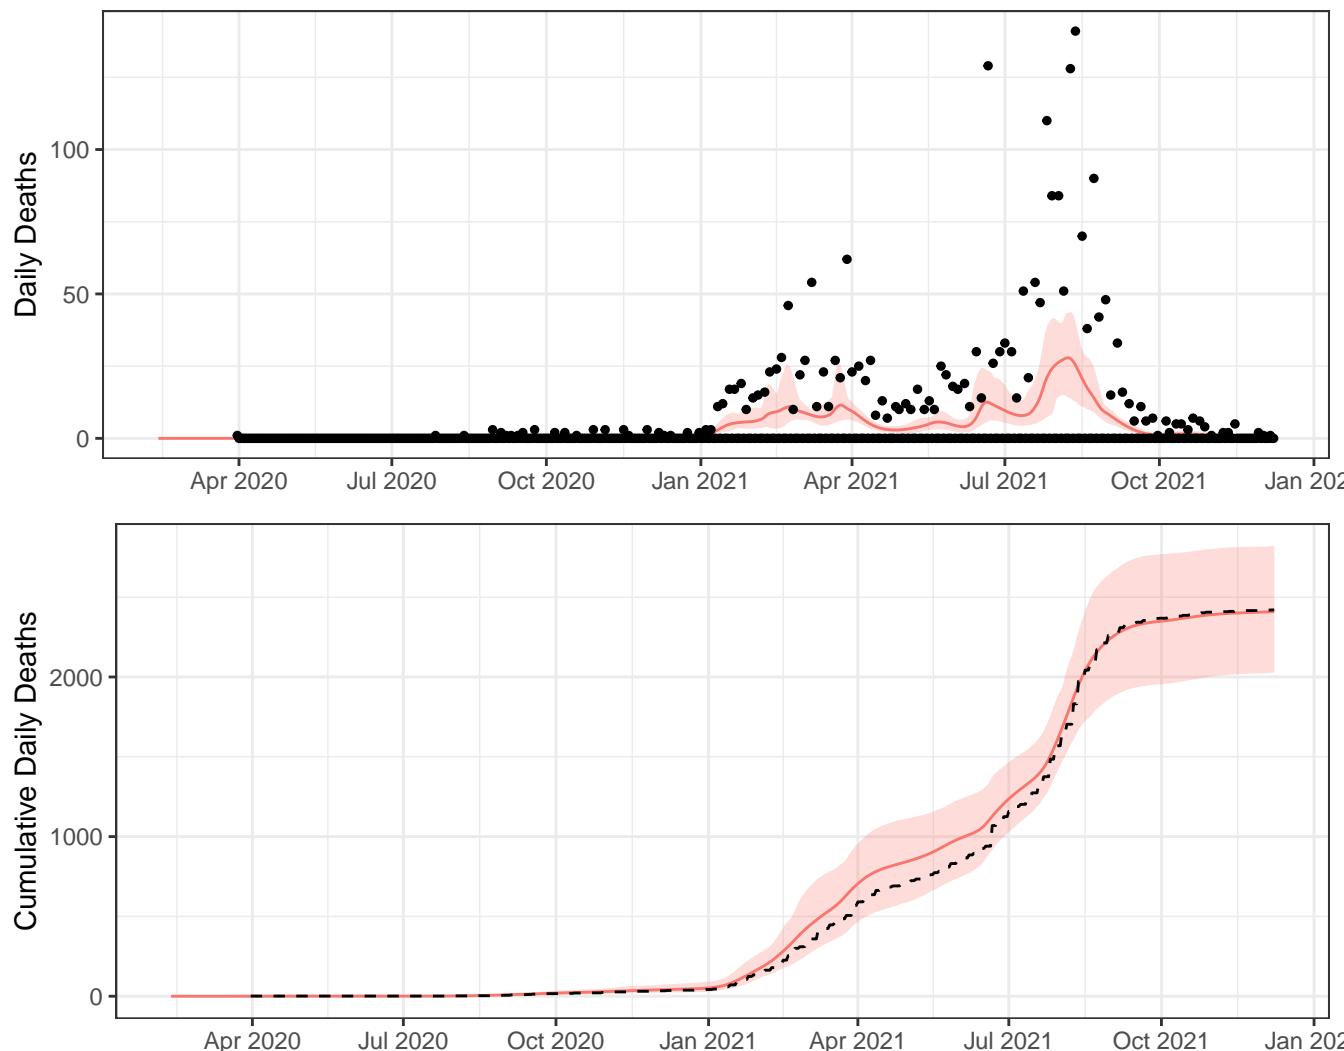

Daily deaths are included with reported COVID–19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Bhutan

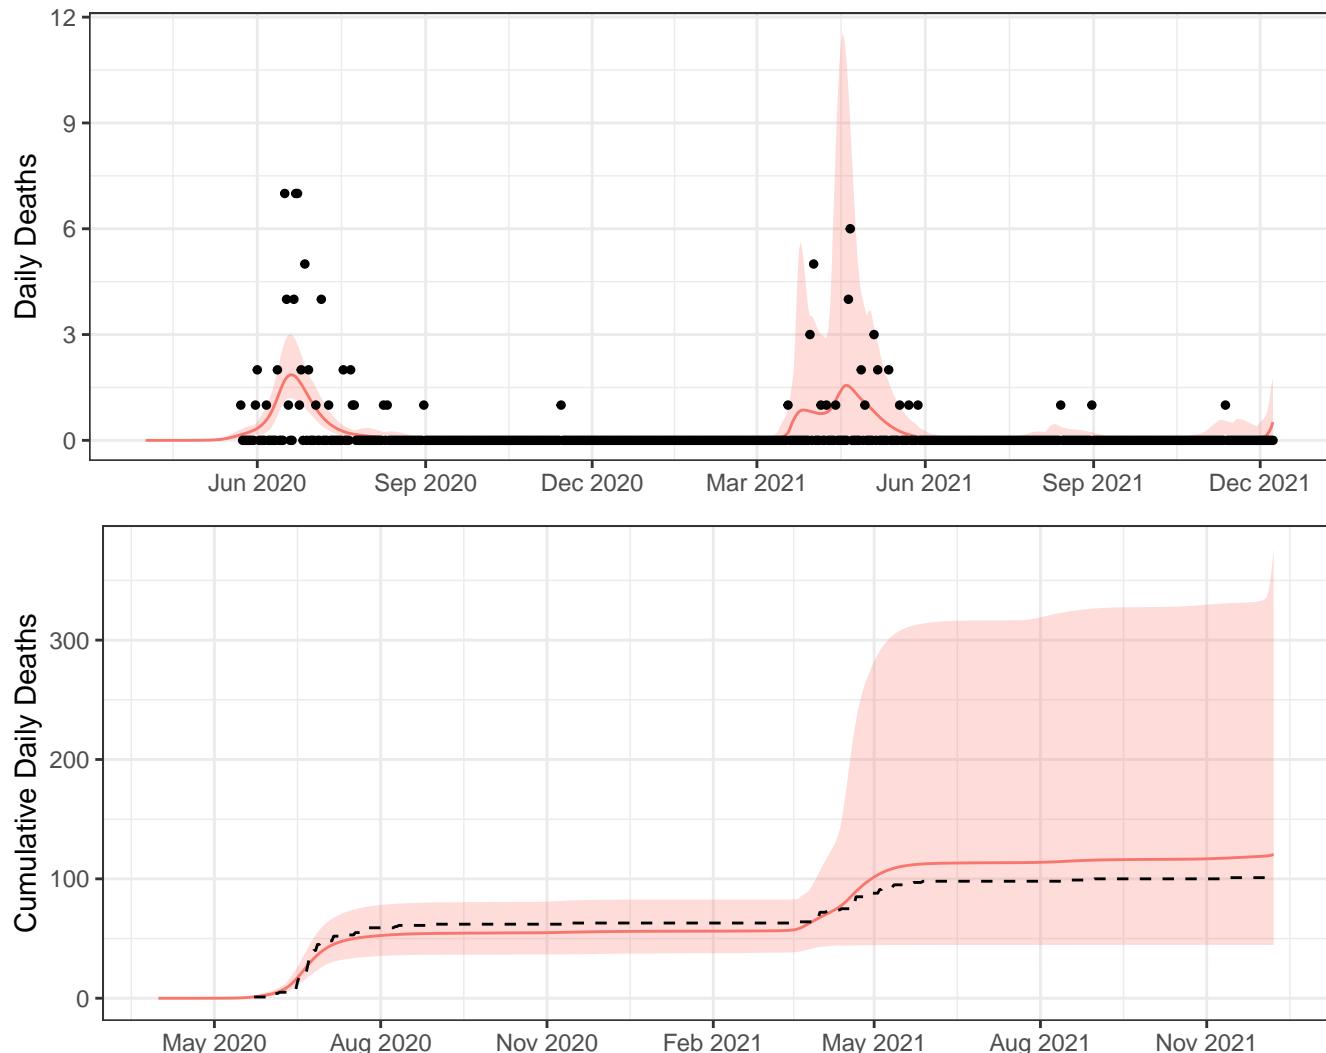

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Botswana

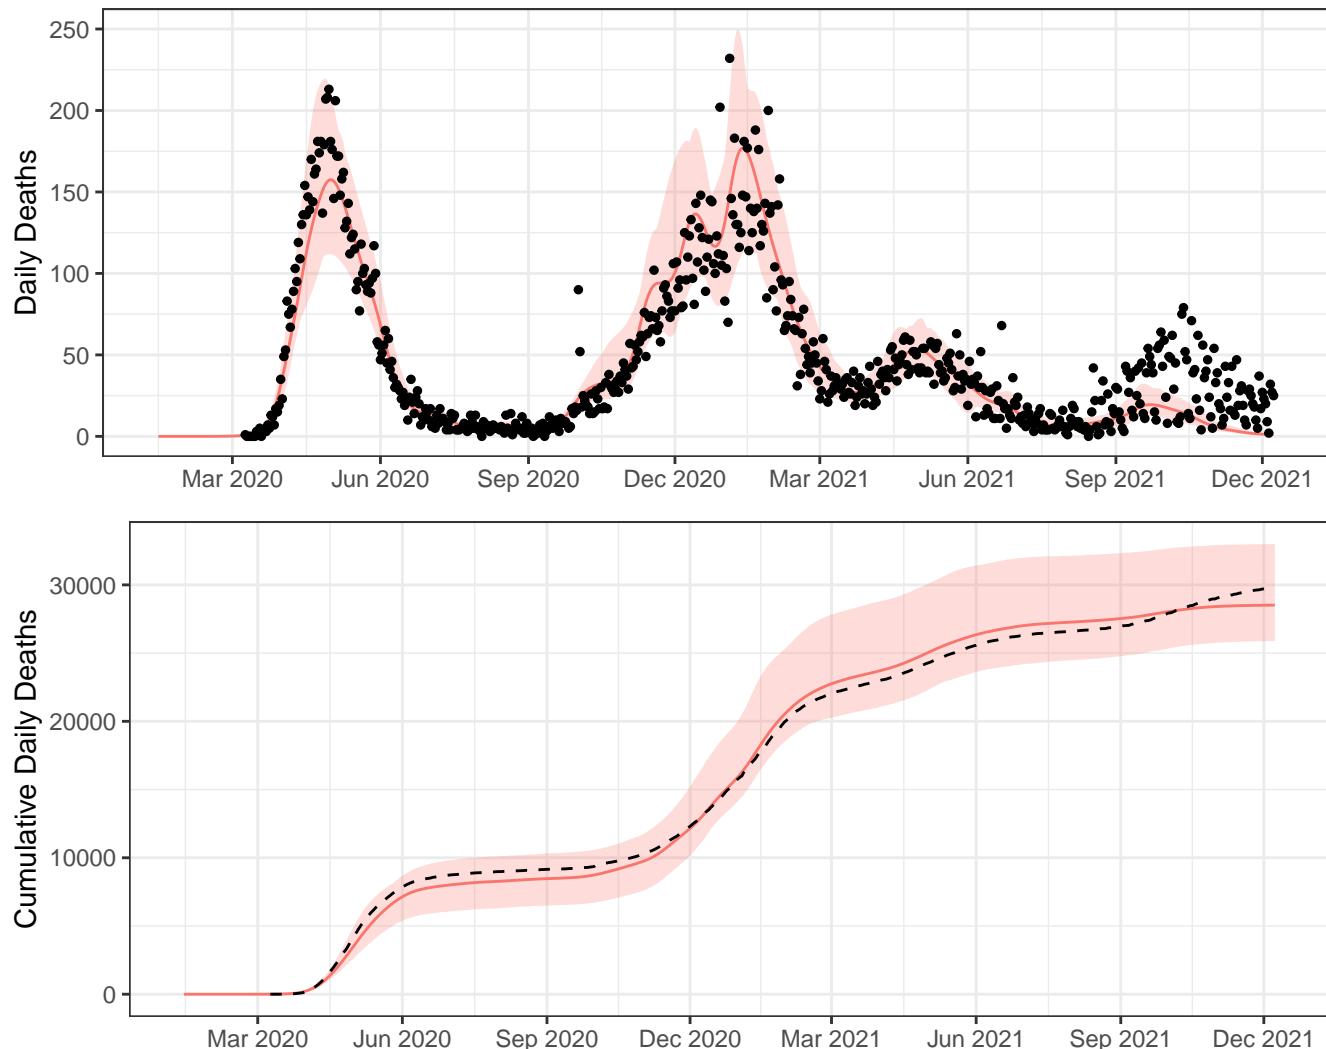

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Central African Republic

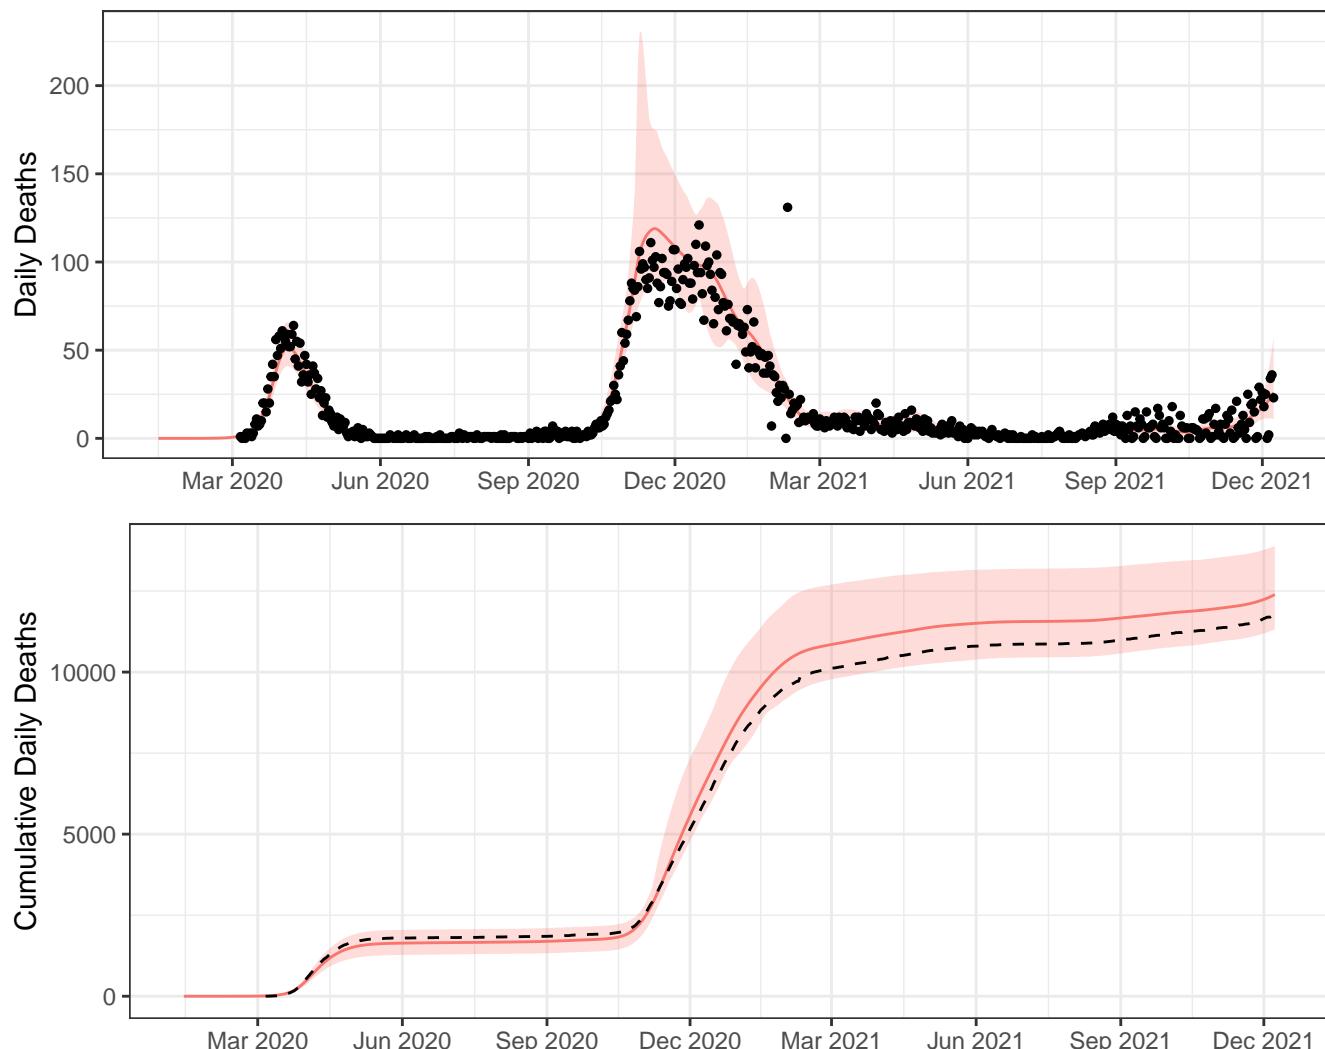

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Canada

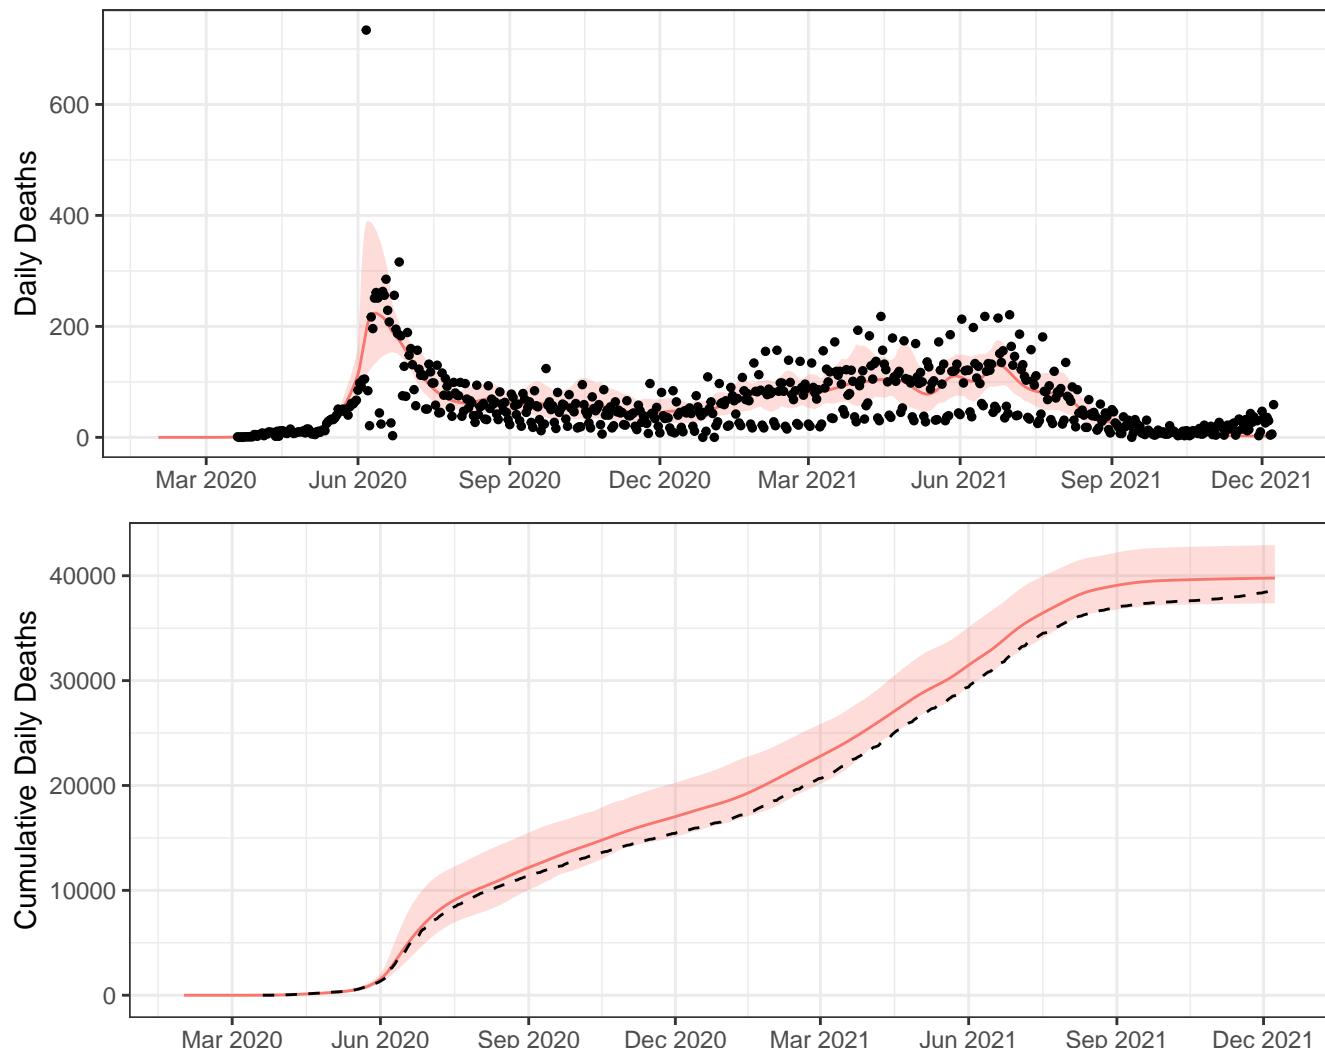

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Switzerland

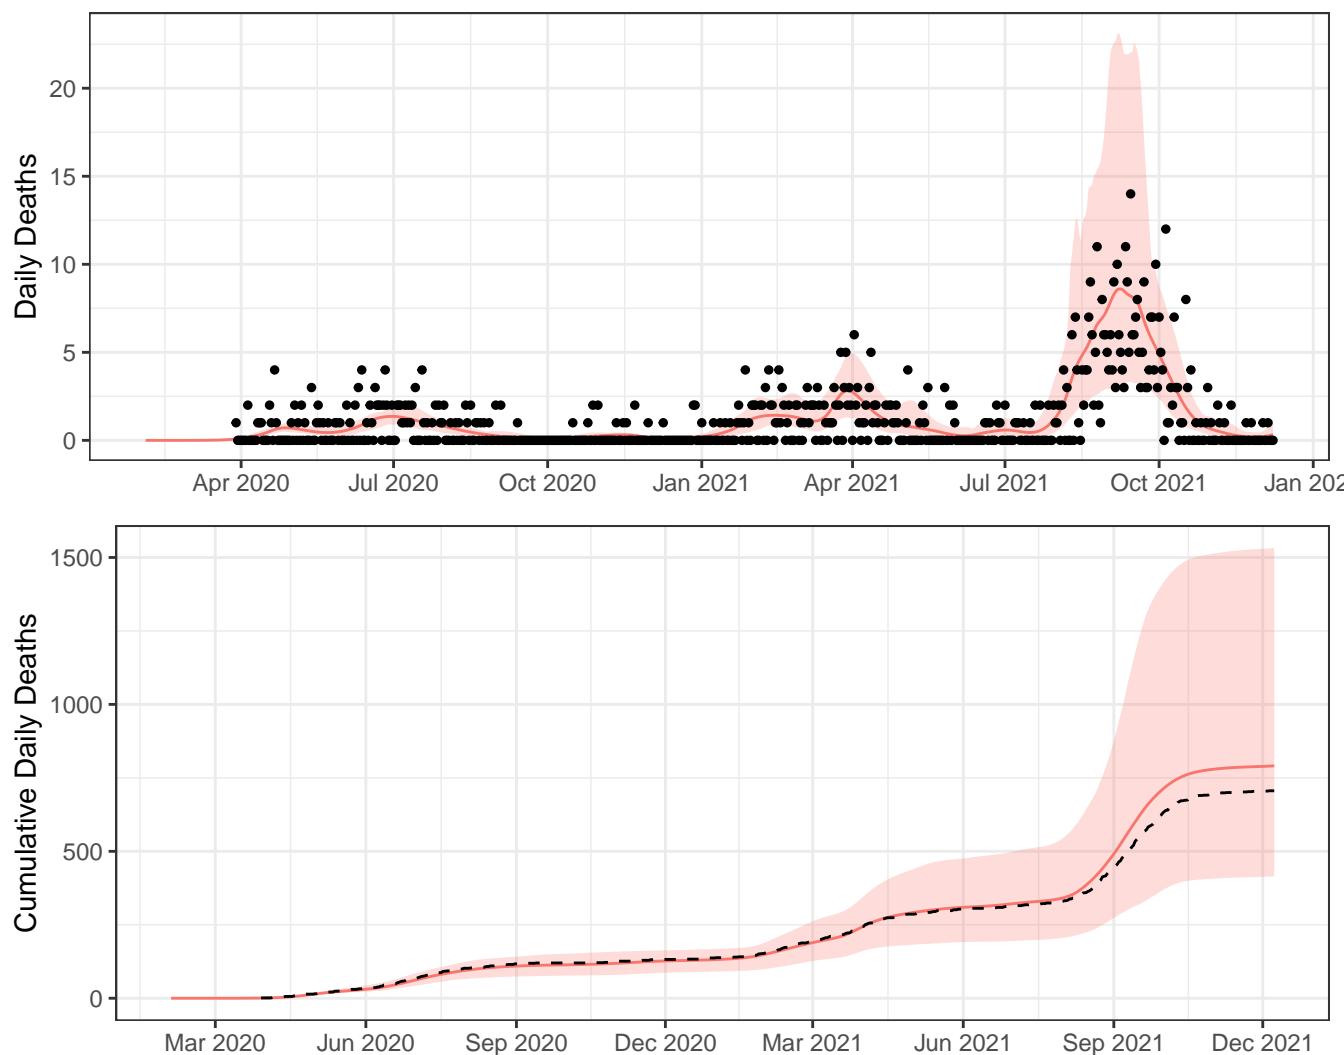

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Chile

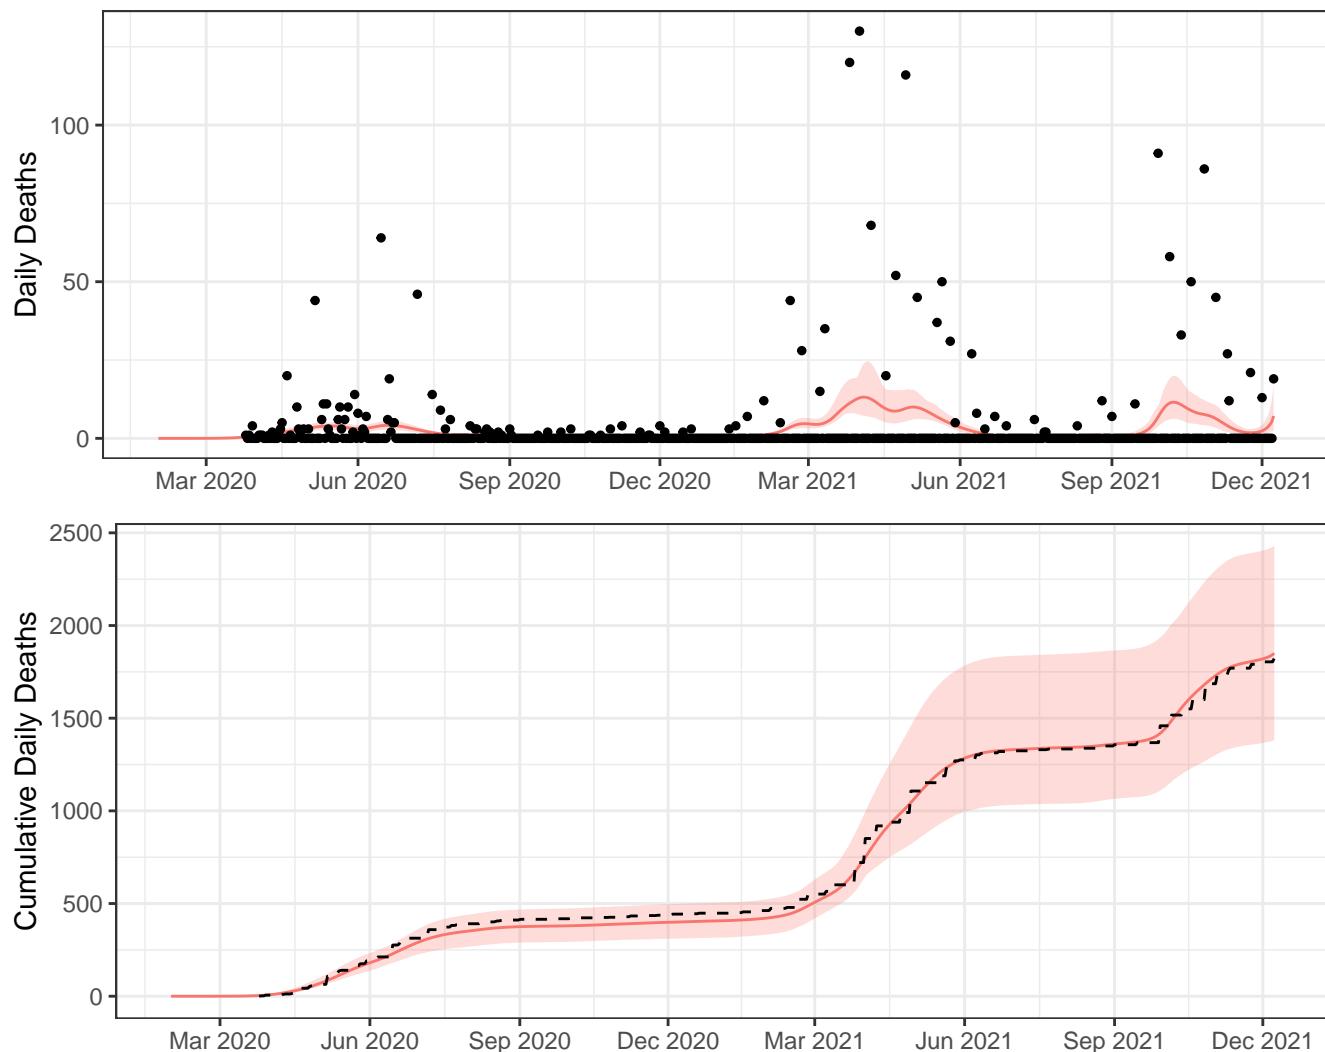

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cote d'Ivoire

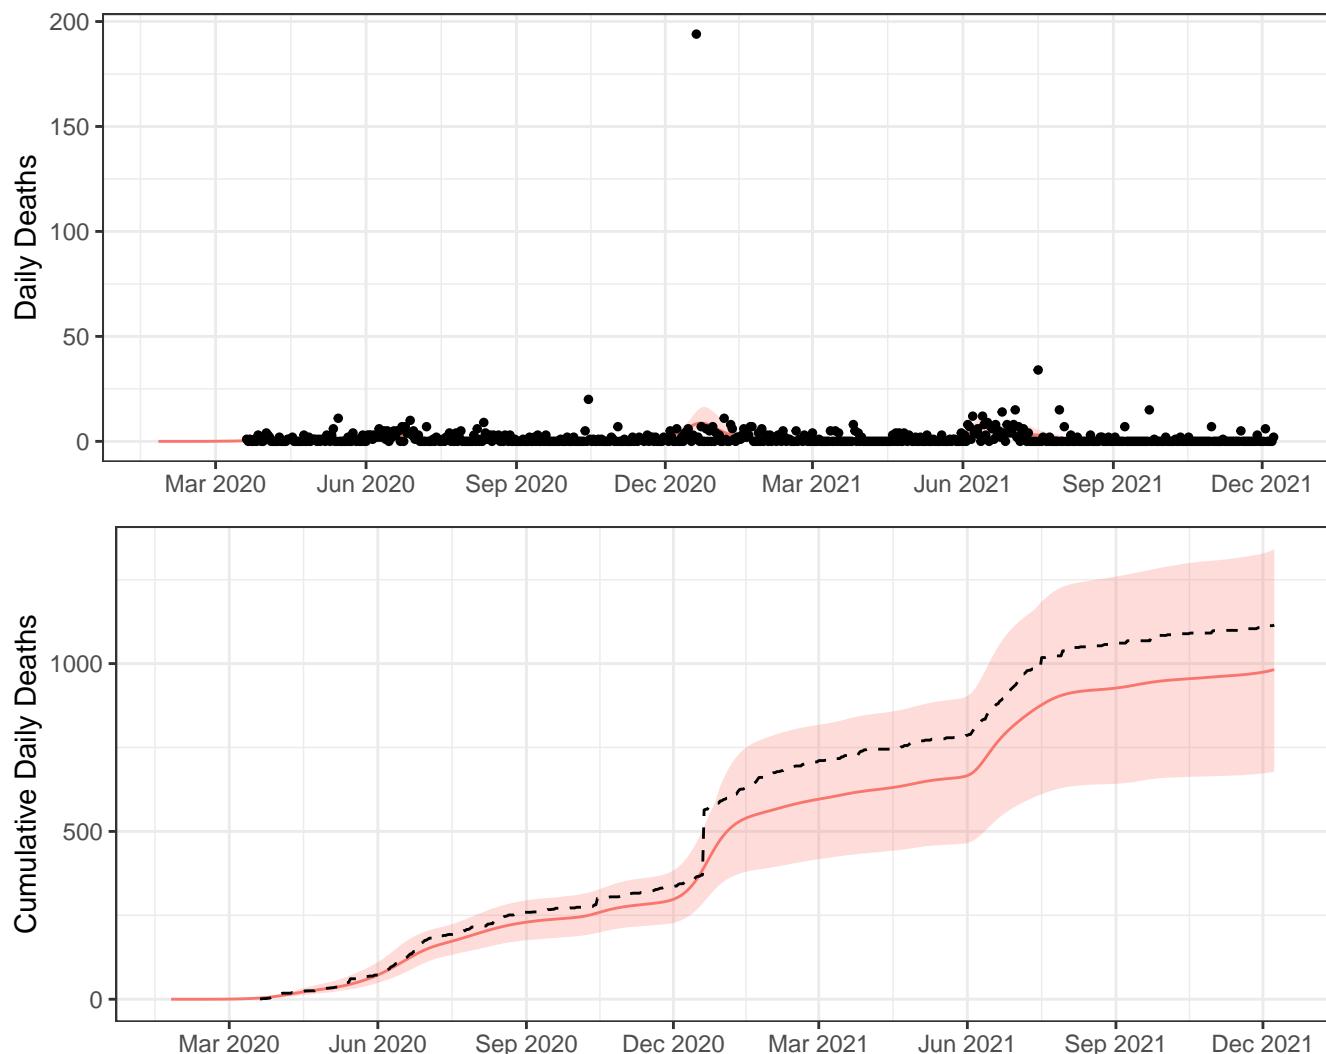

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cameroon

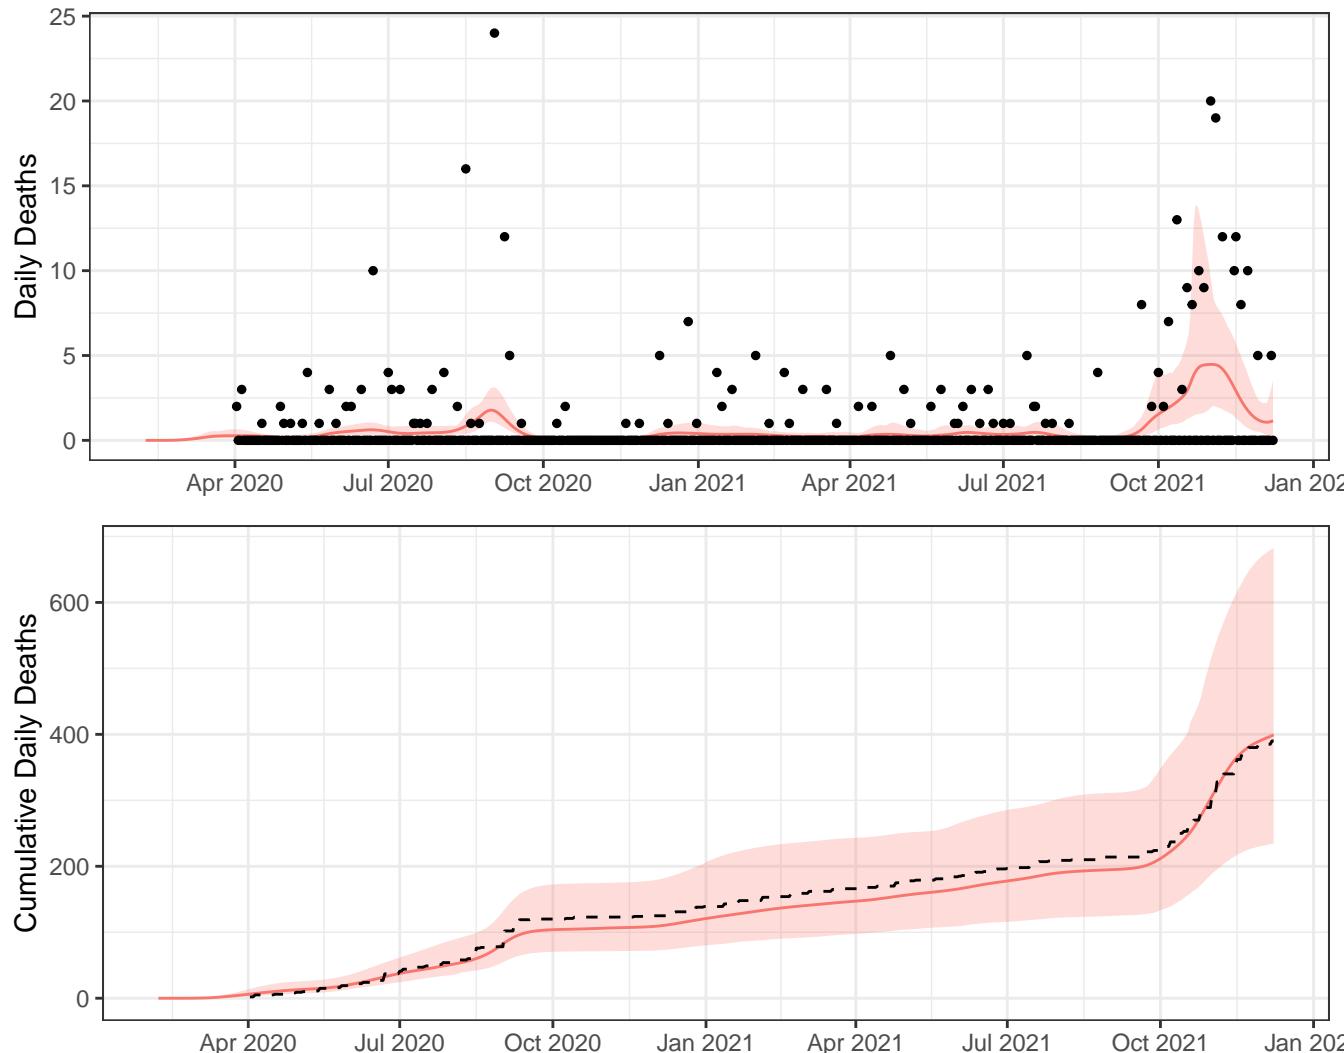

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Democratic Republic of Congo

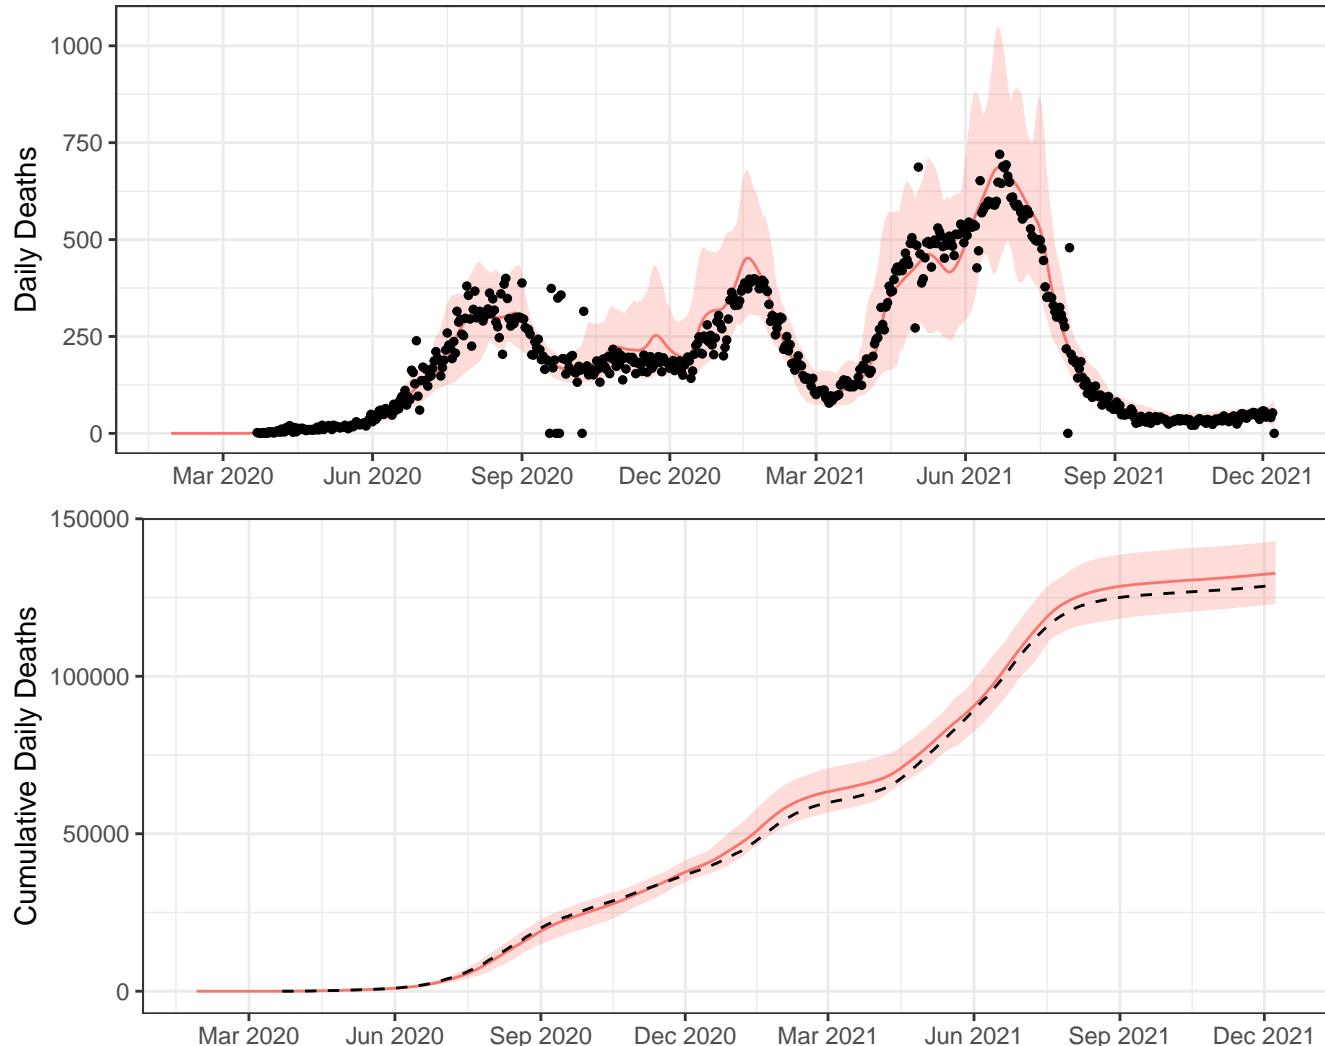

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Republic of the Congo

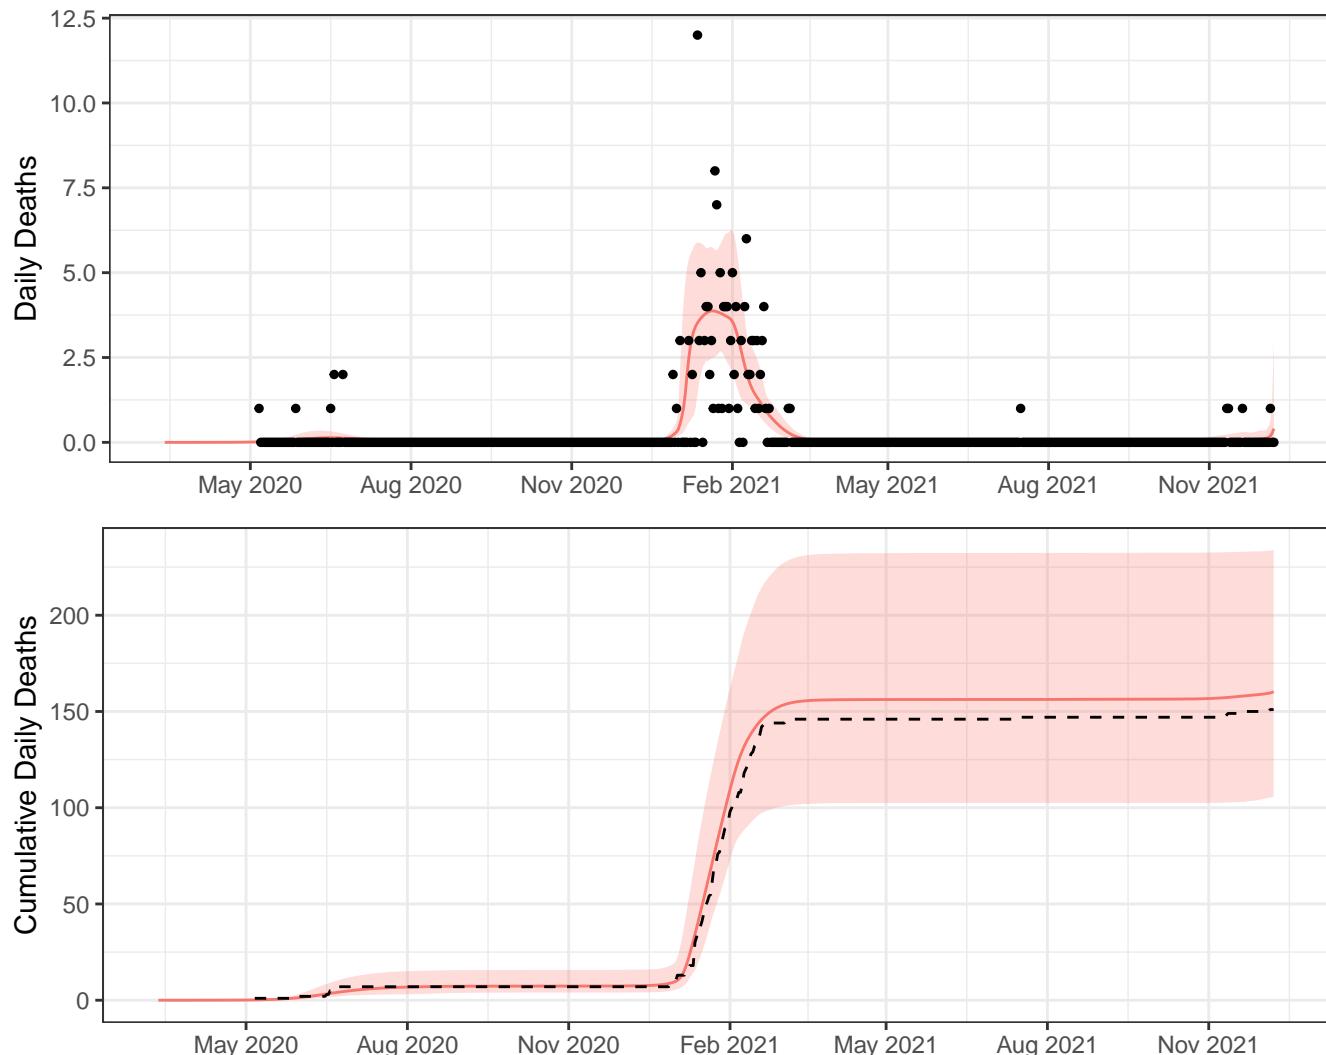

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Colombia

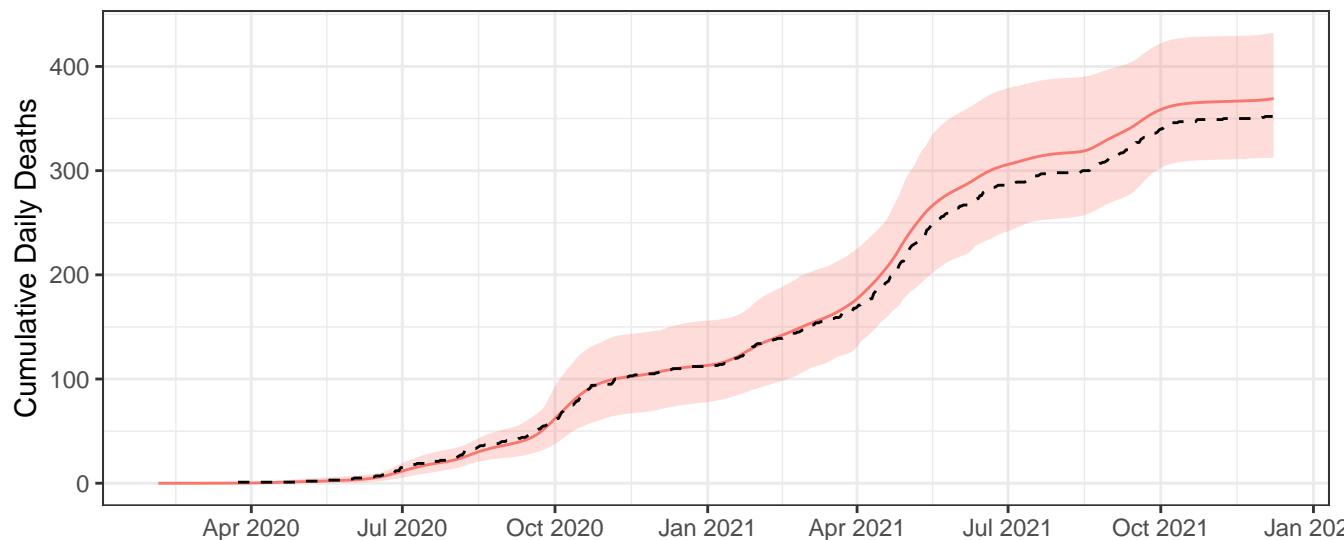

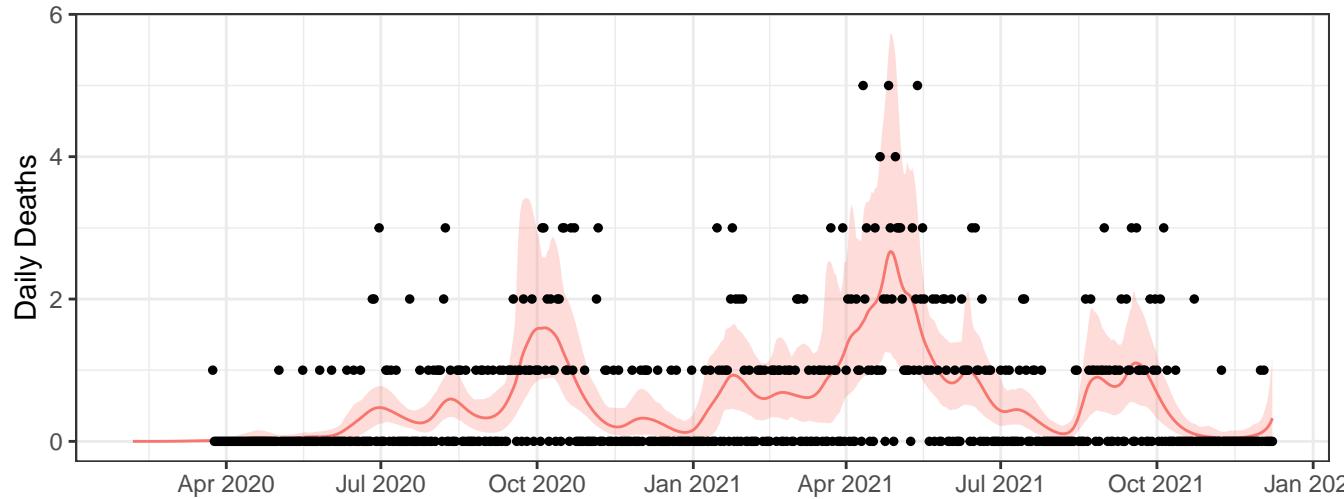

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Comoros

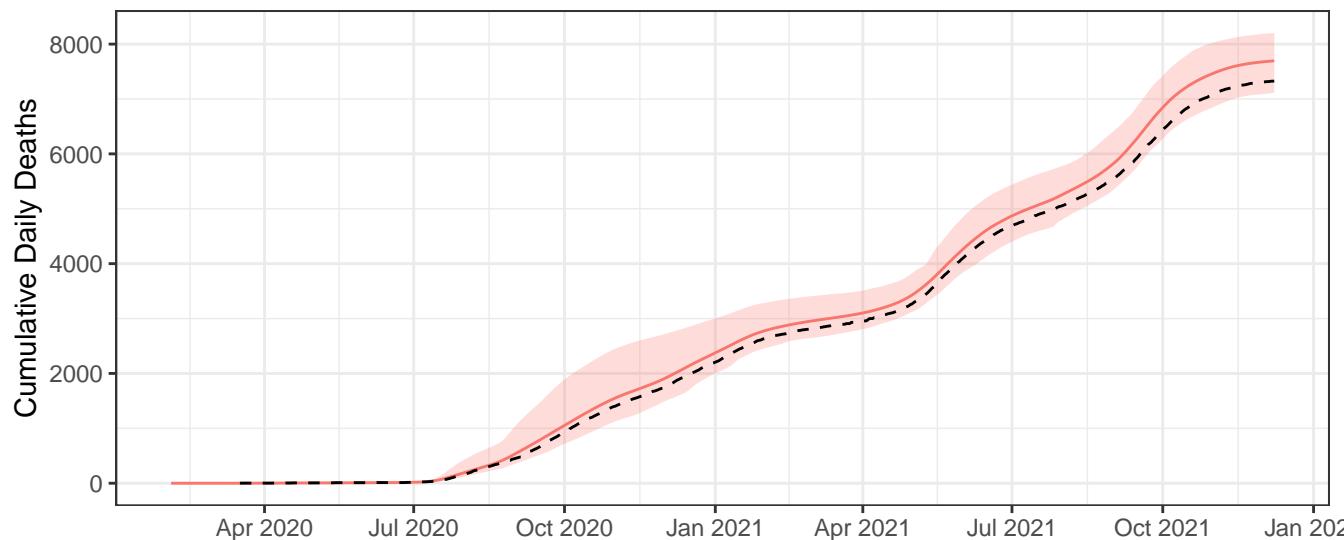

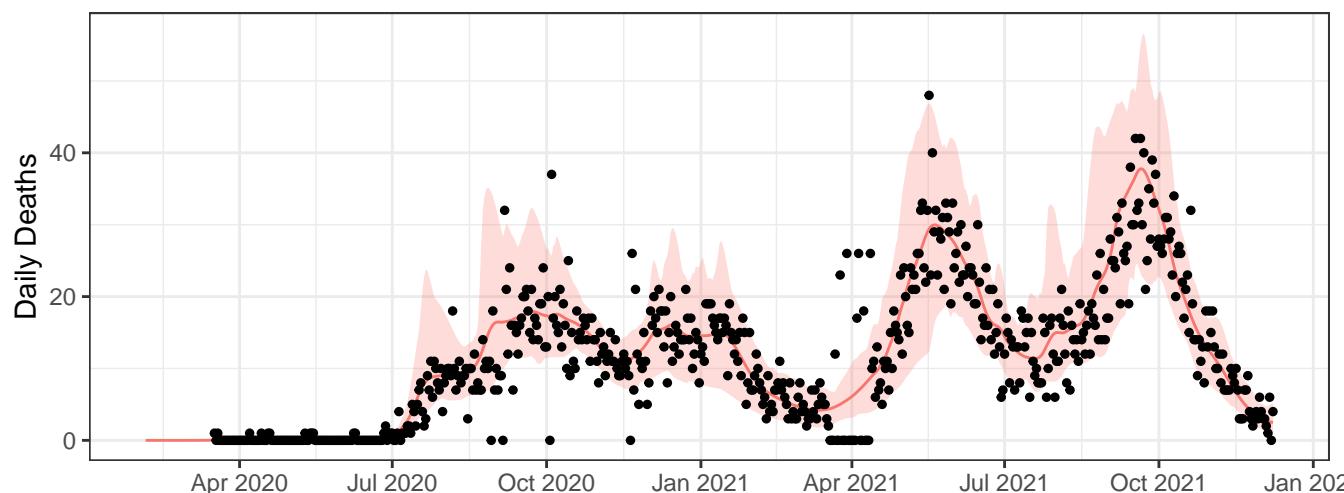

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cabo Verde

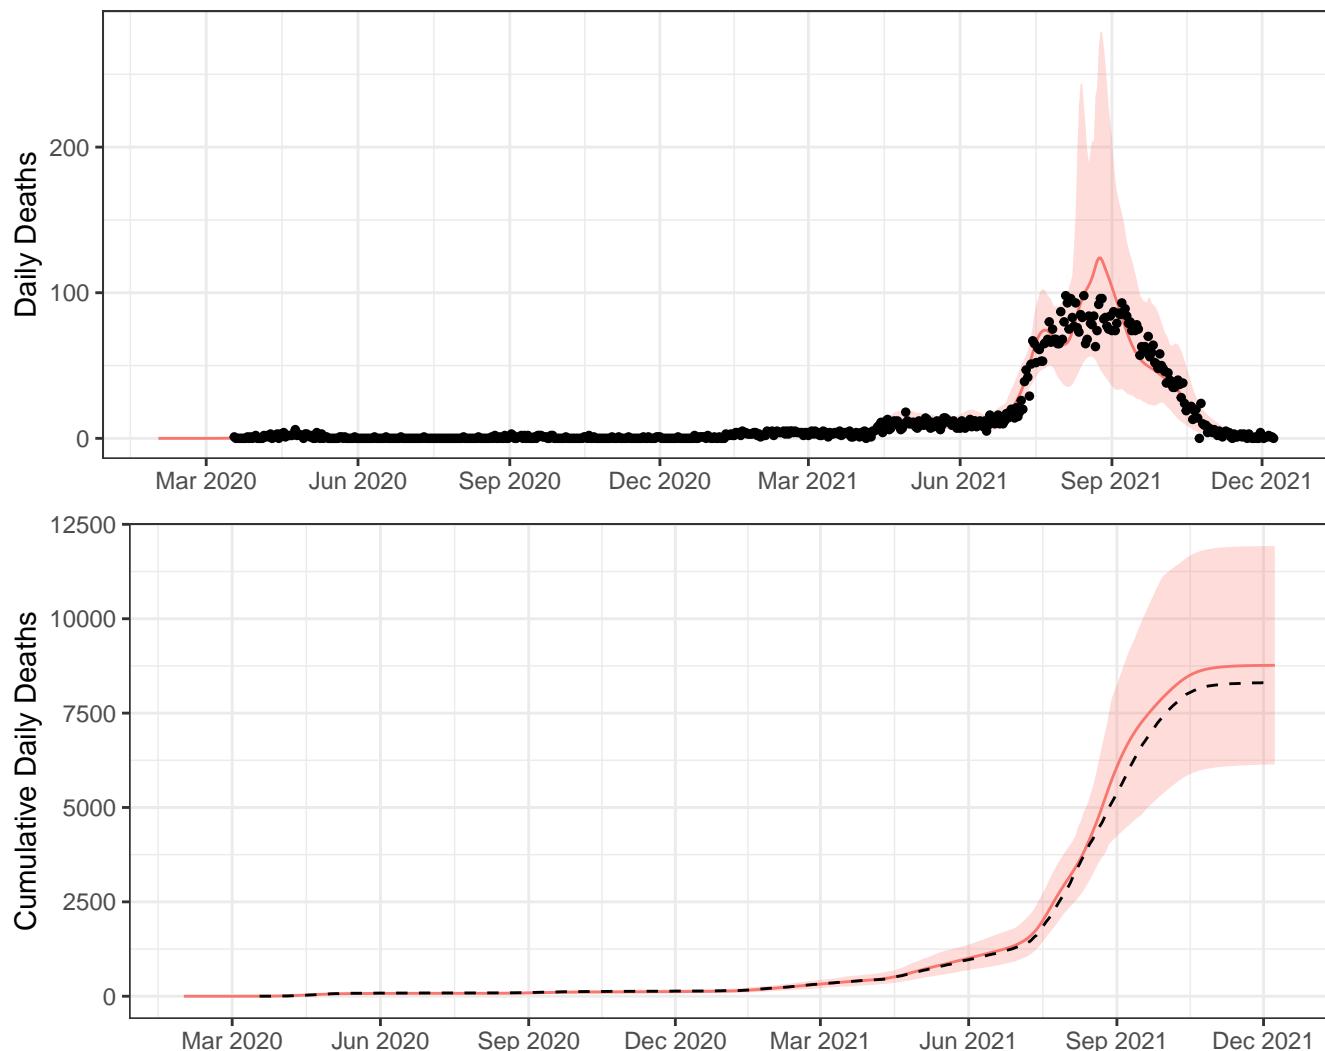

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Costa Rica

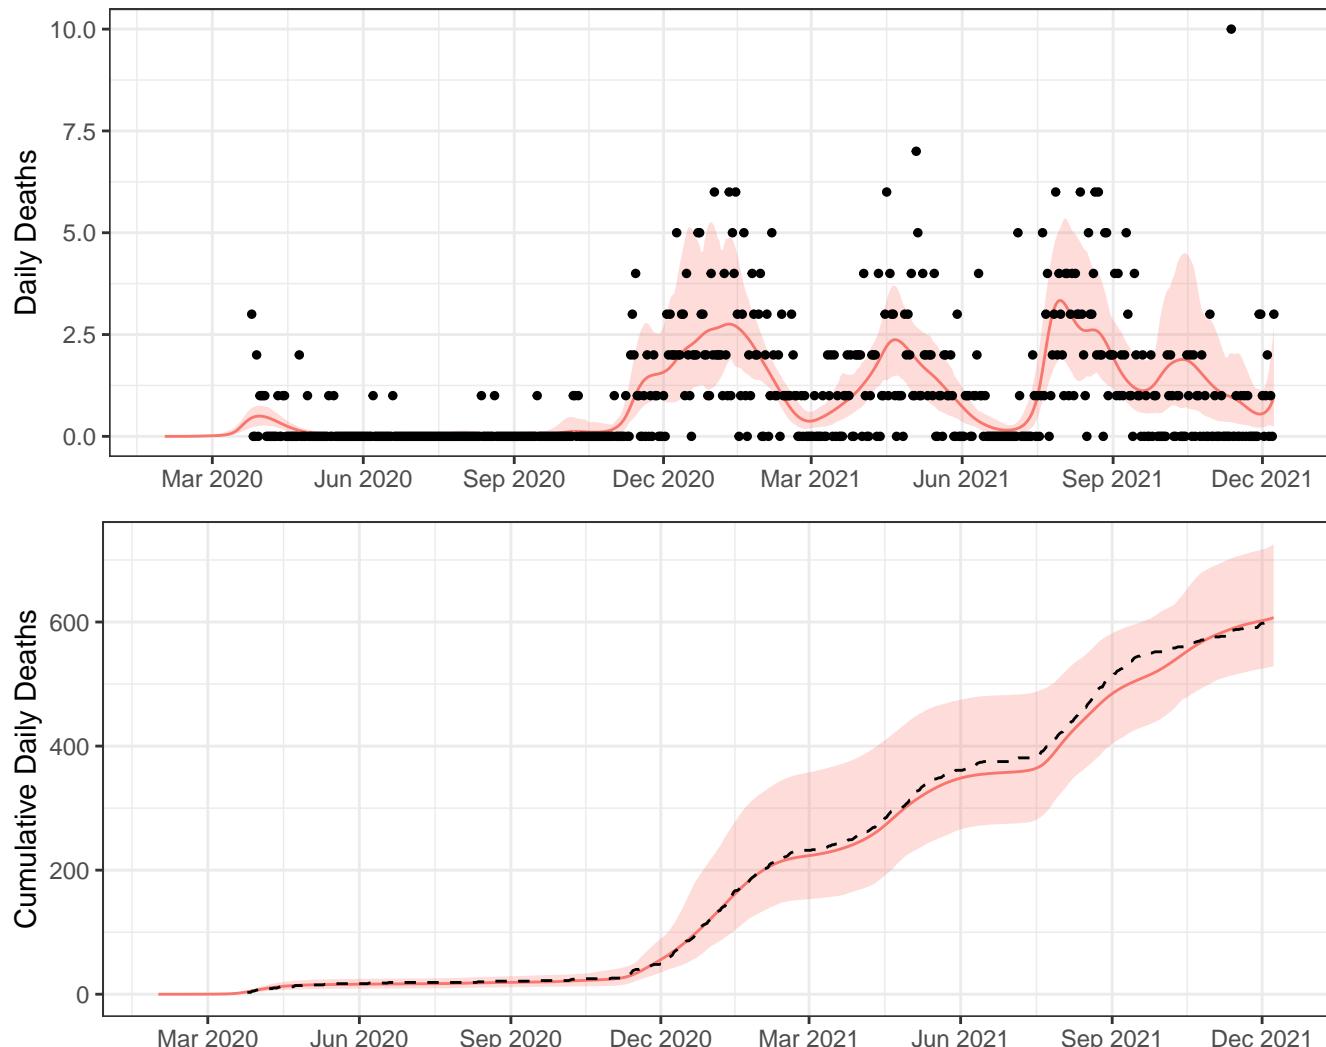

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cuba

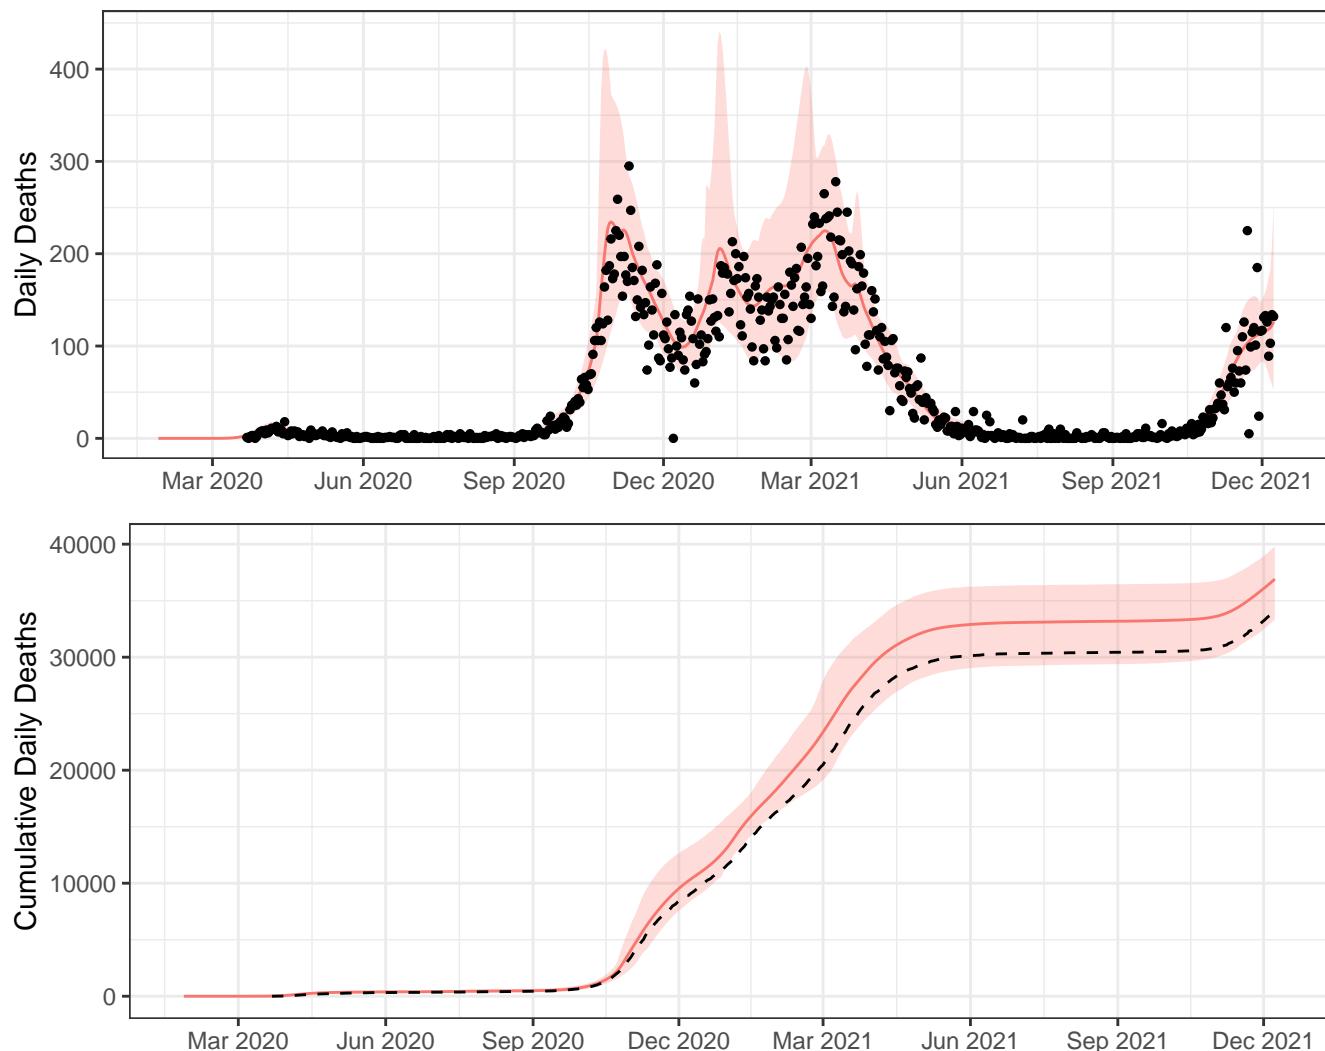

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cyprus

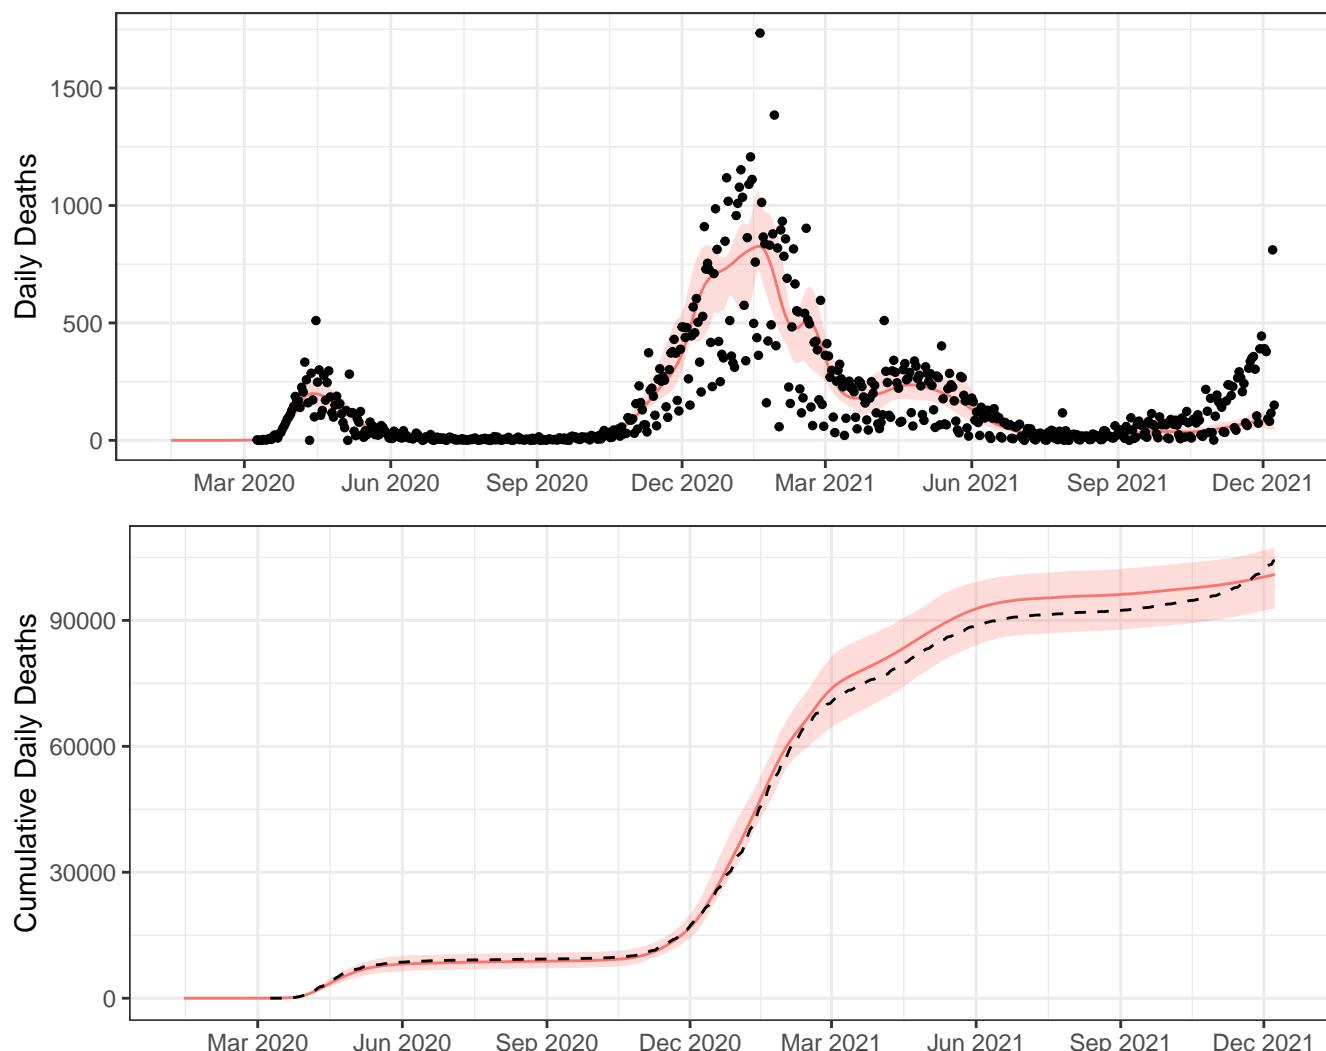

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Czechia

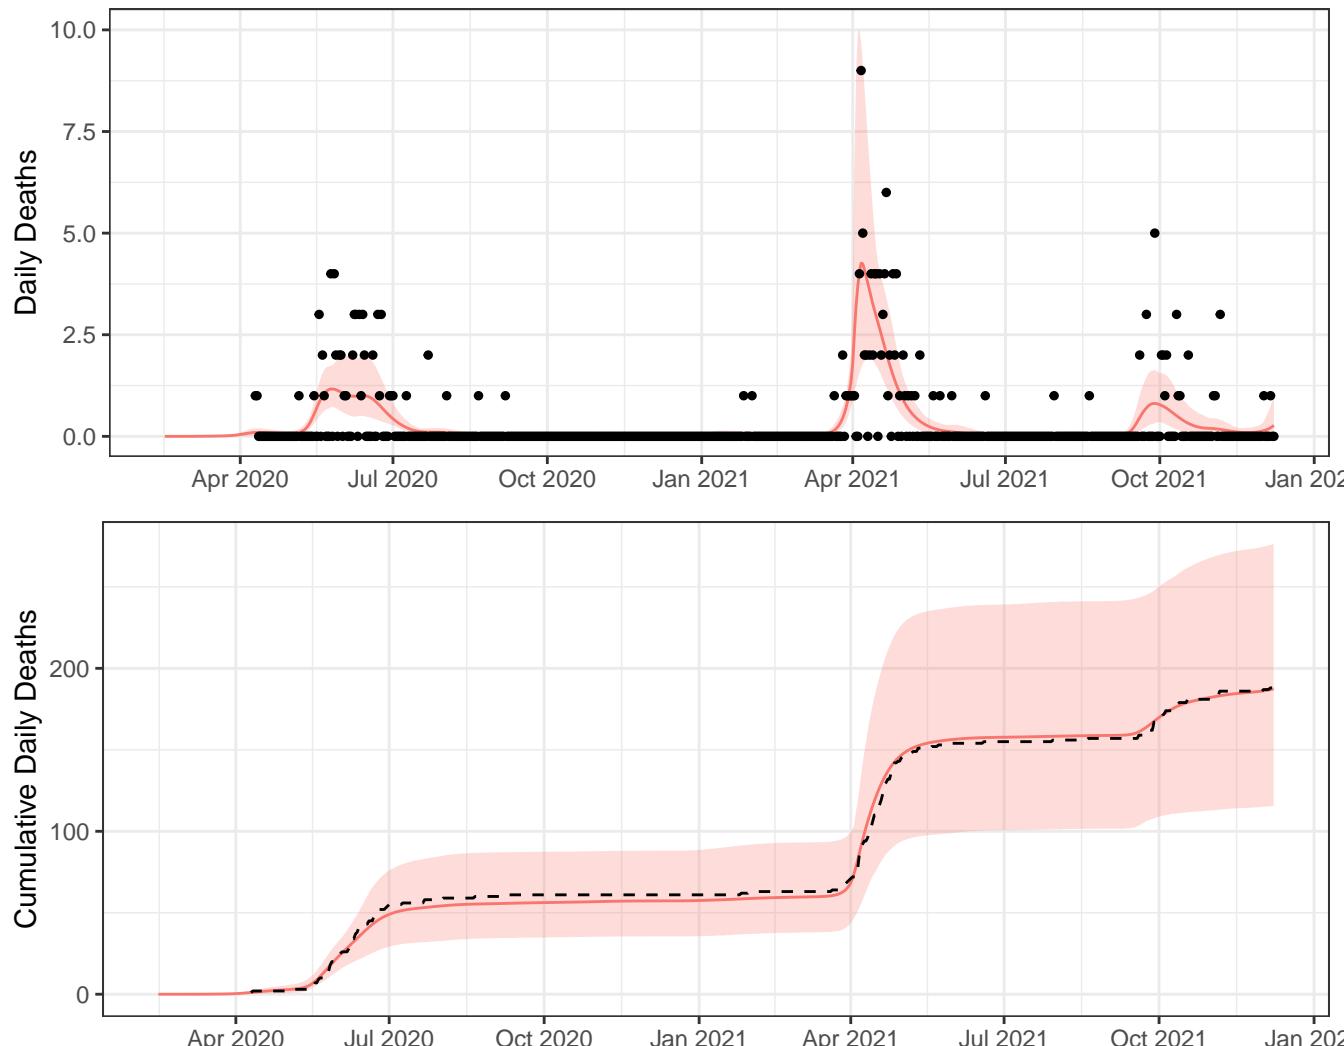

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Germany

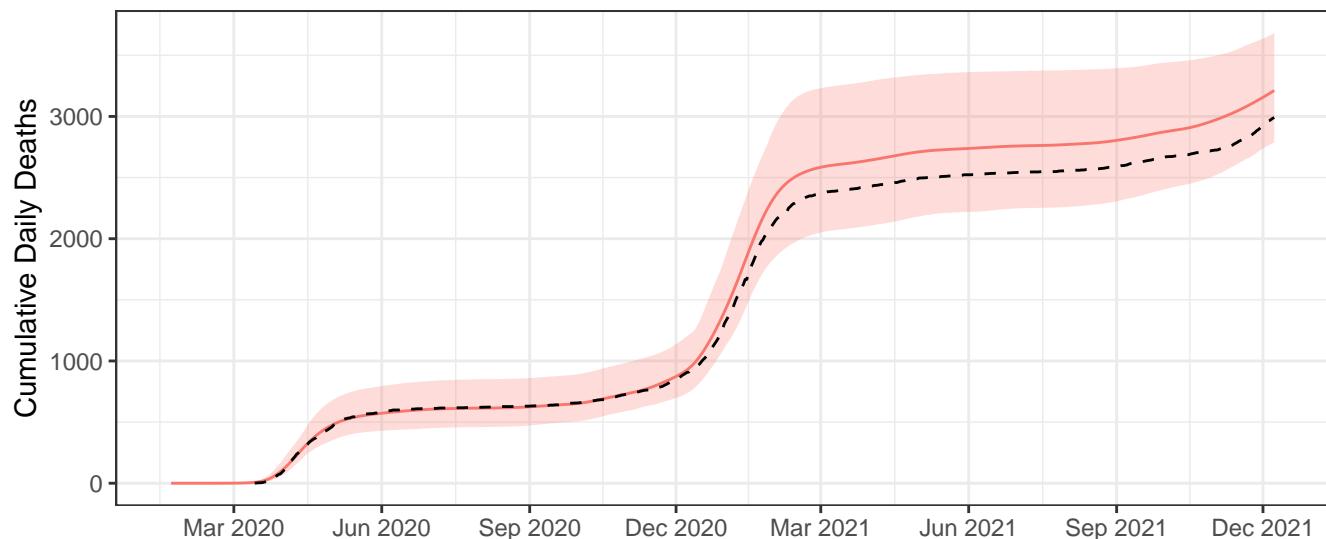

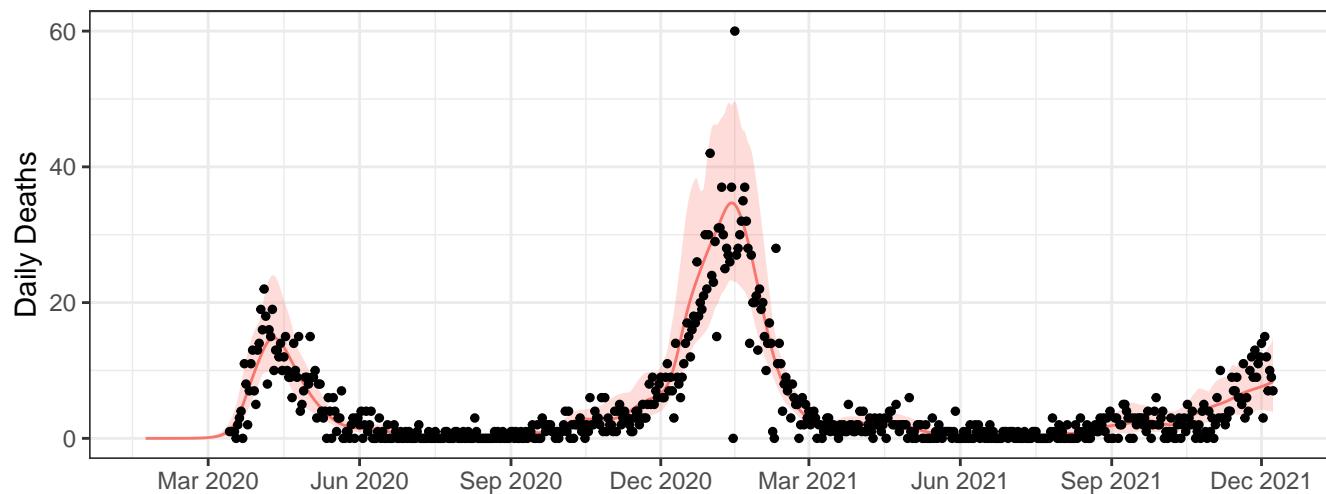

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Djibouti

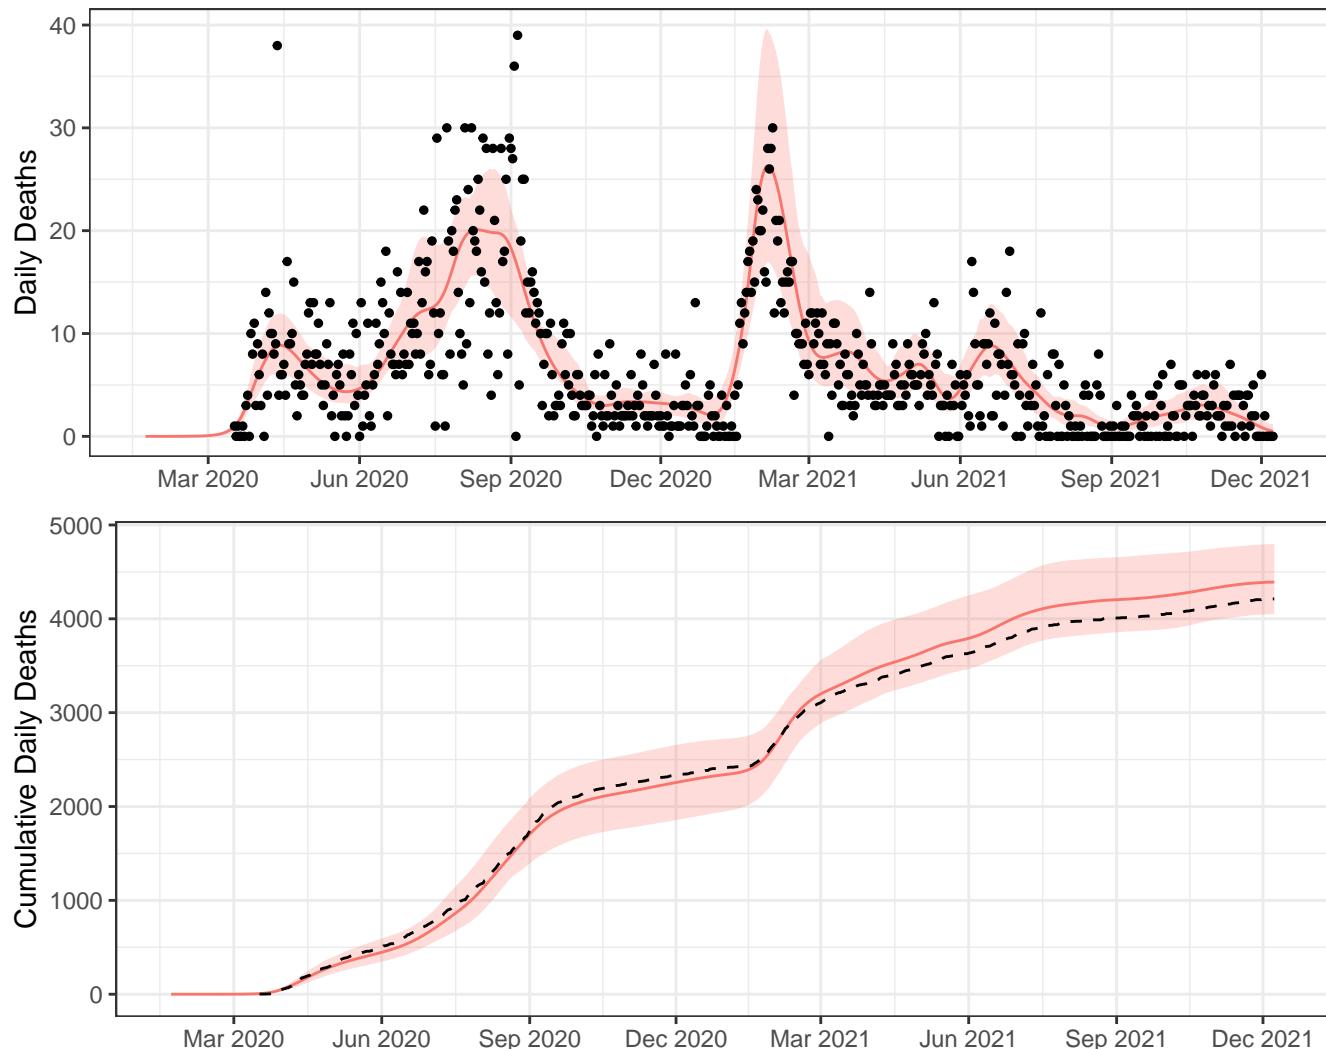

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Denmark

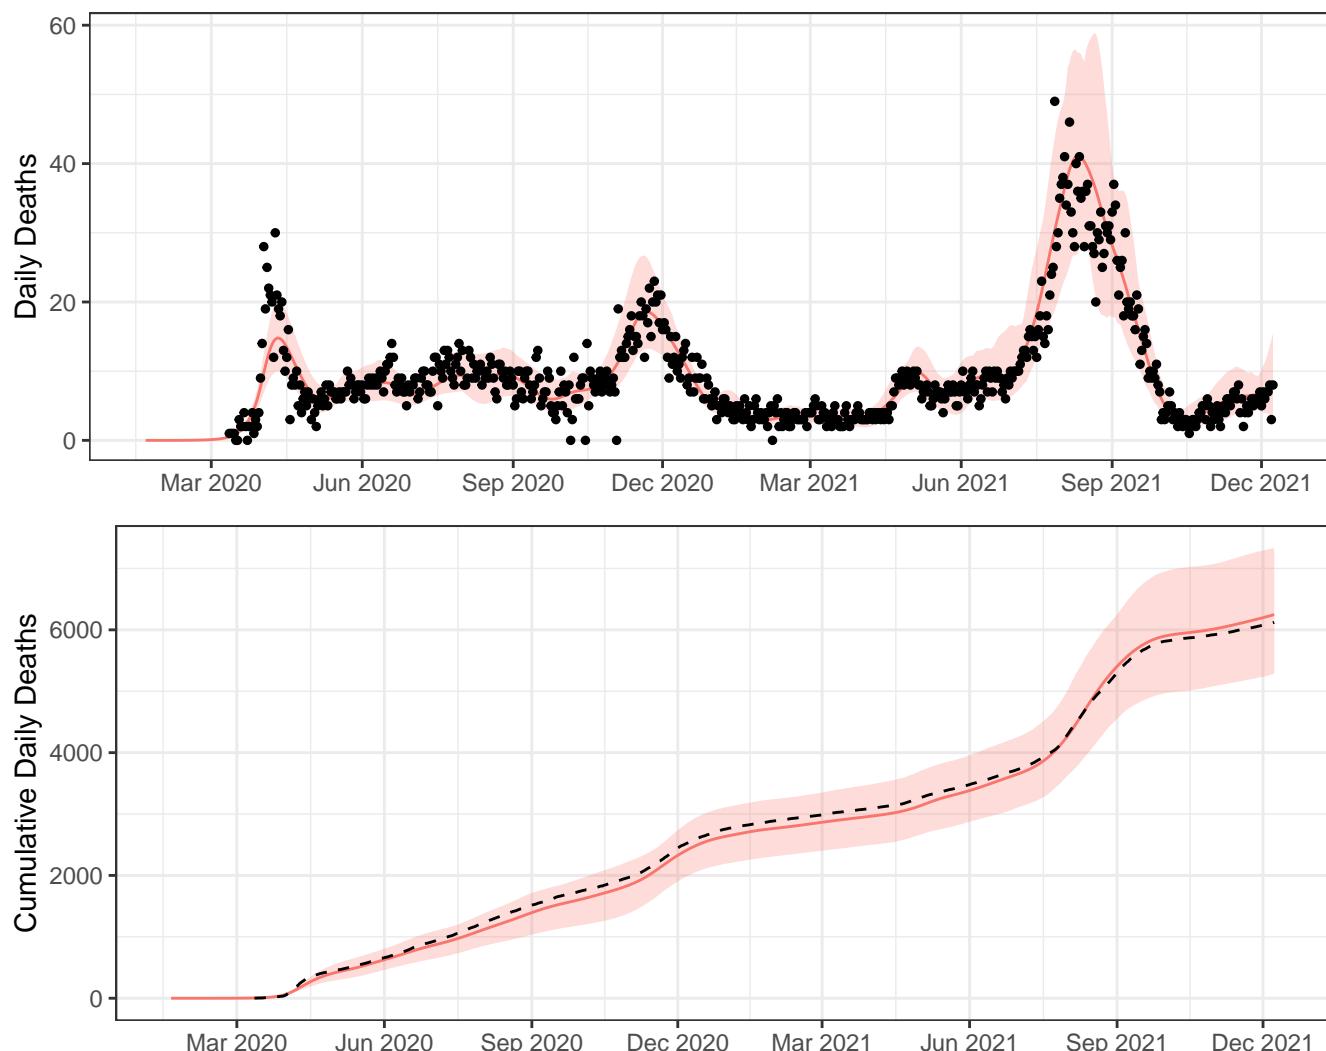

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Dominican Republic

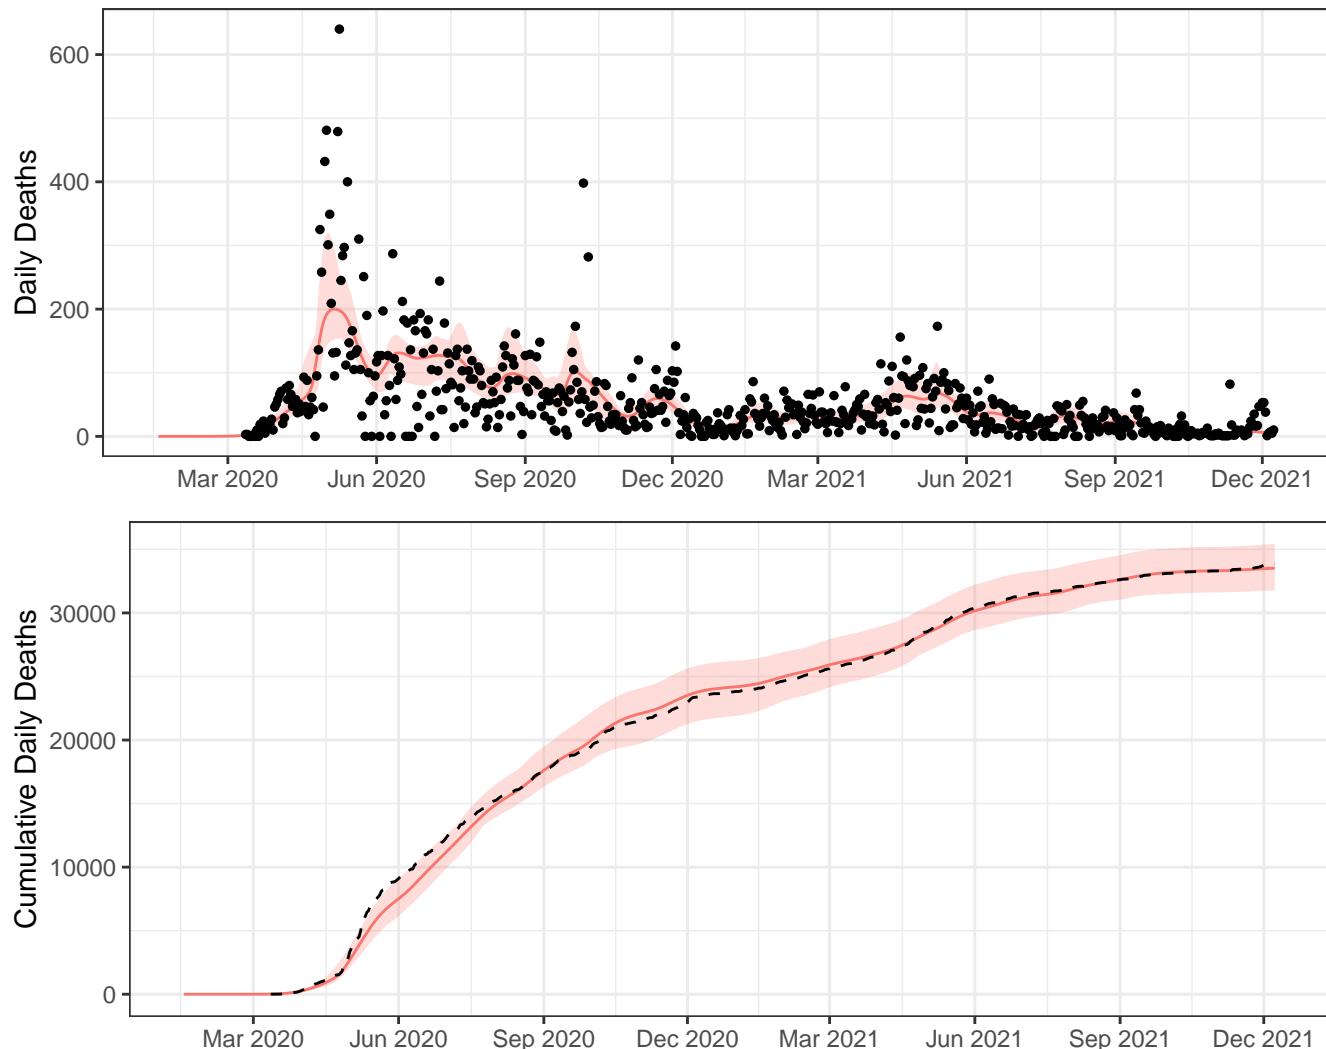

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Algeria

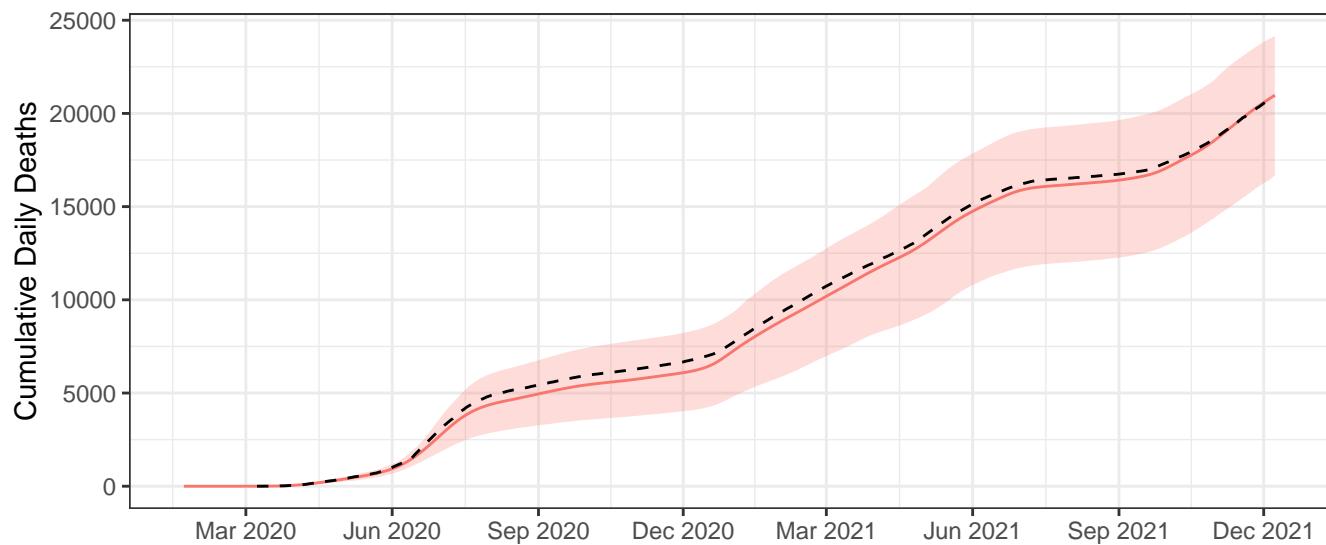

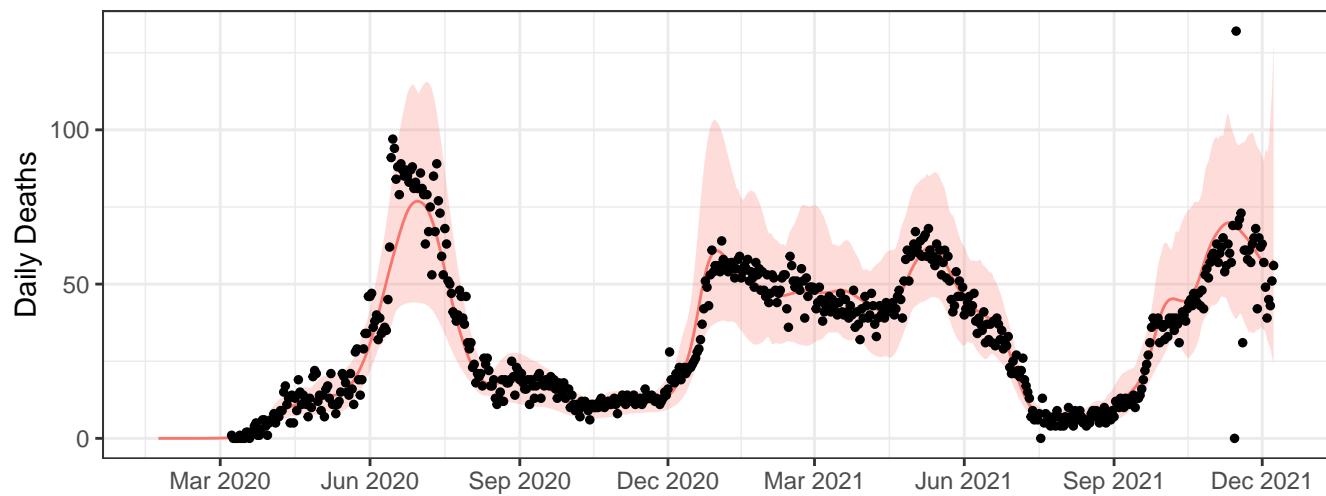

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Ecuador

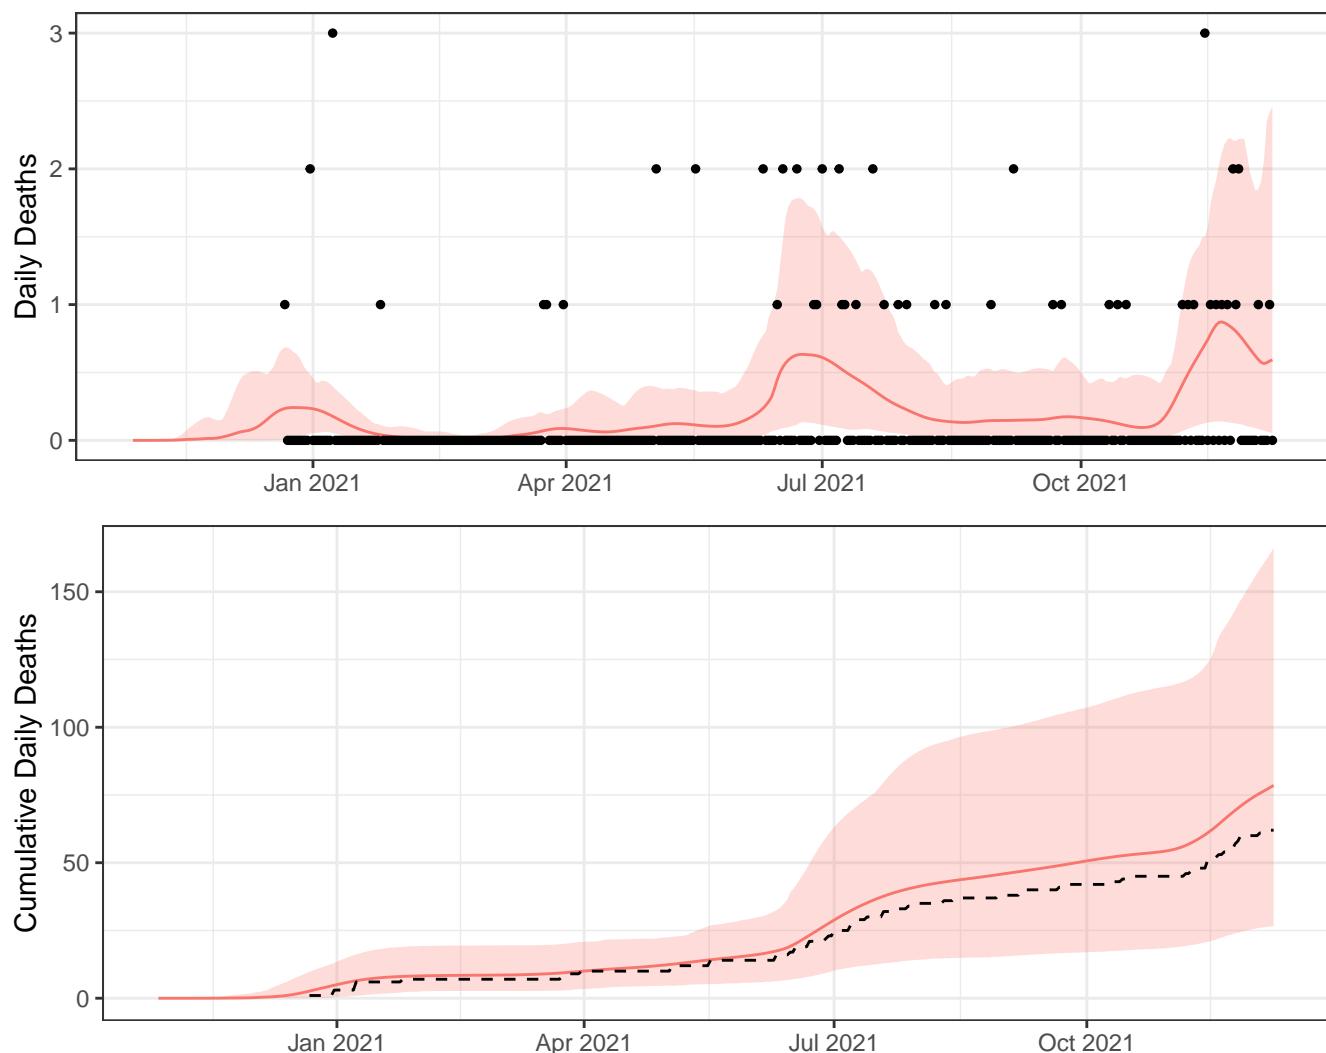

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Egypt

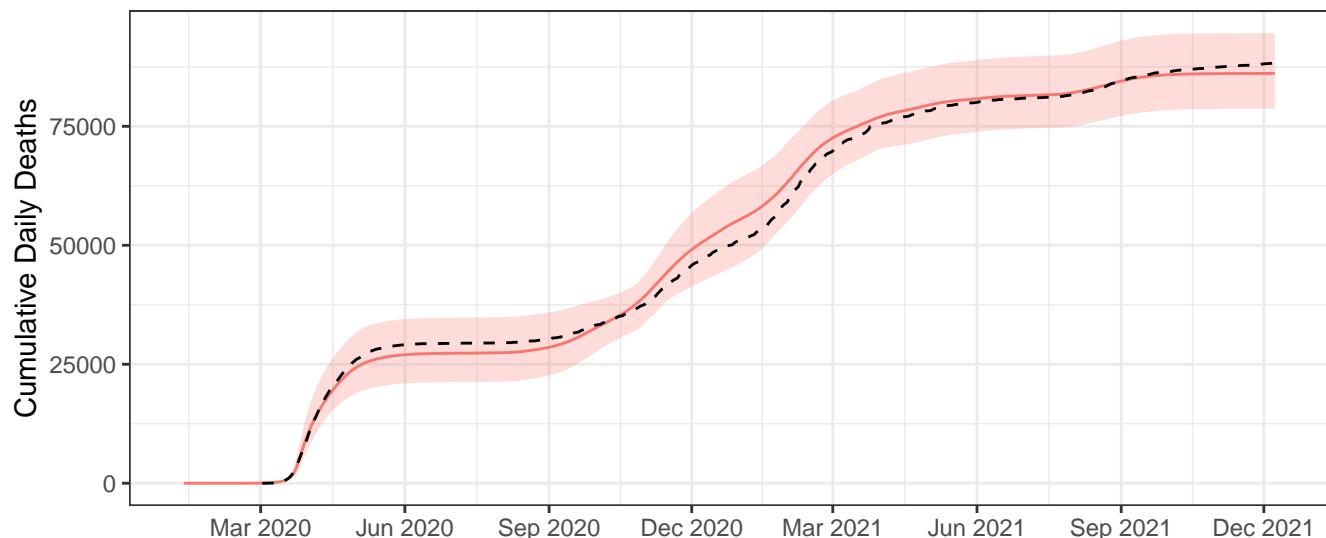

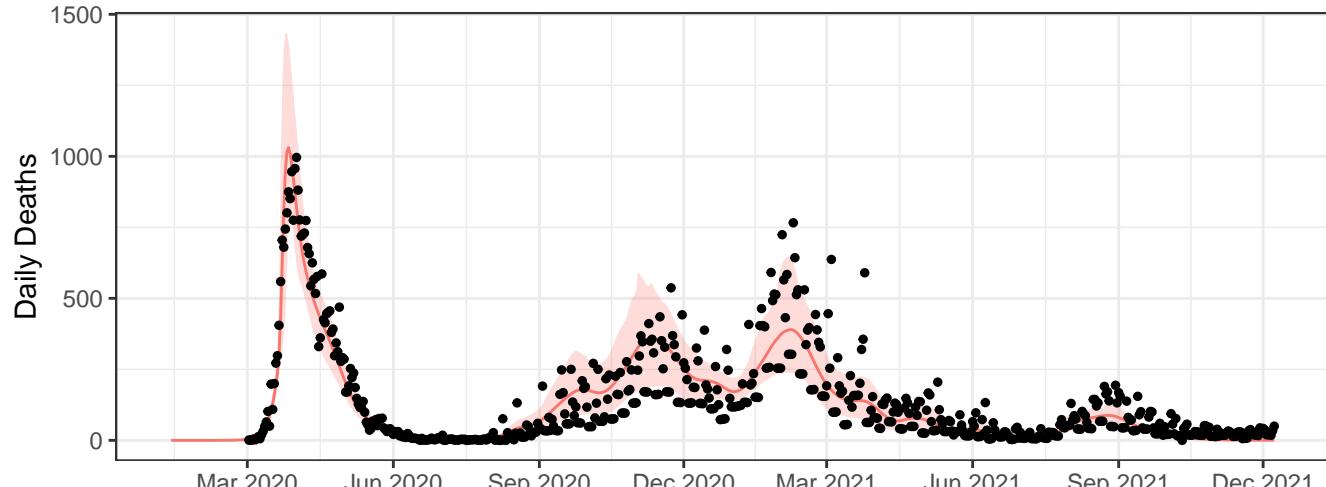

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Eritrea

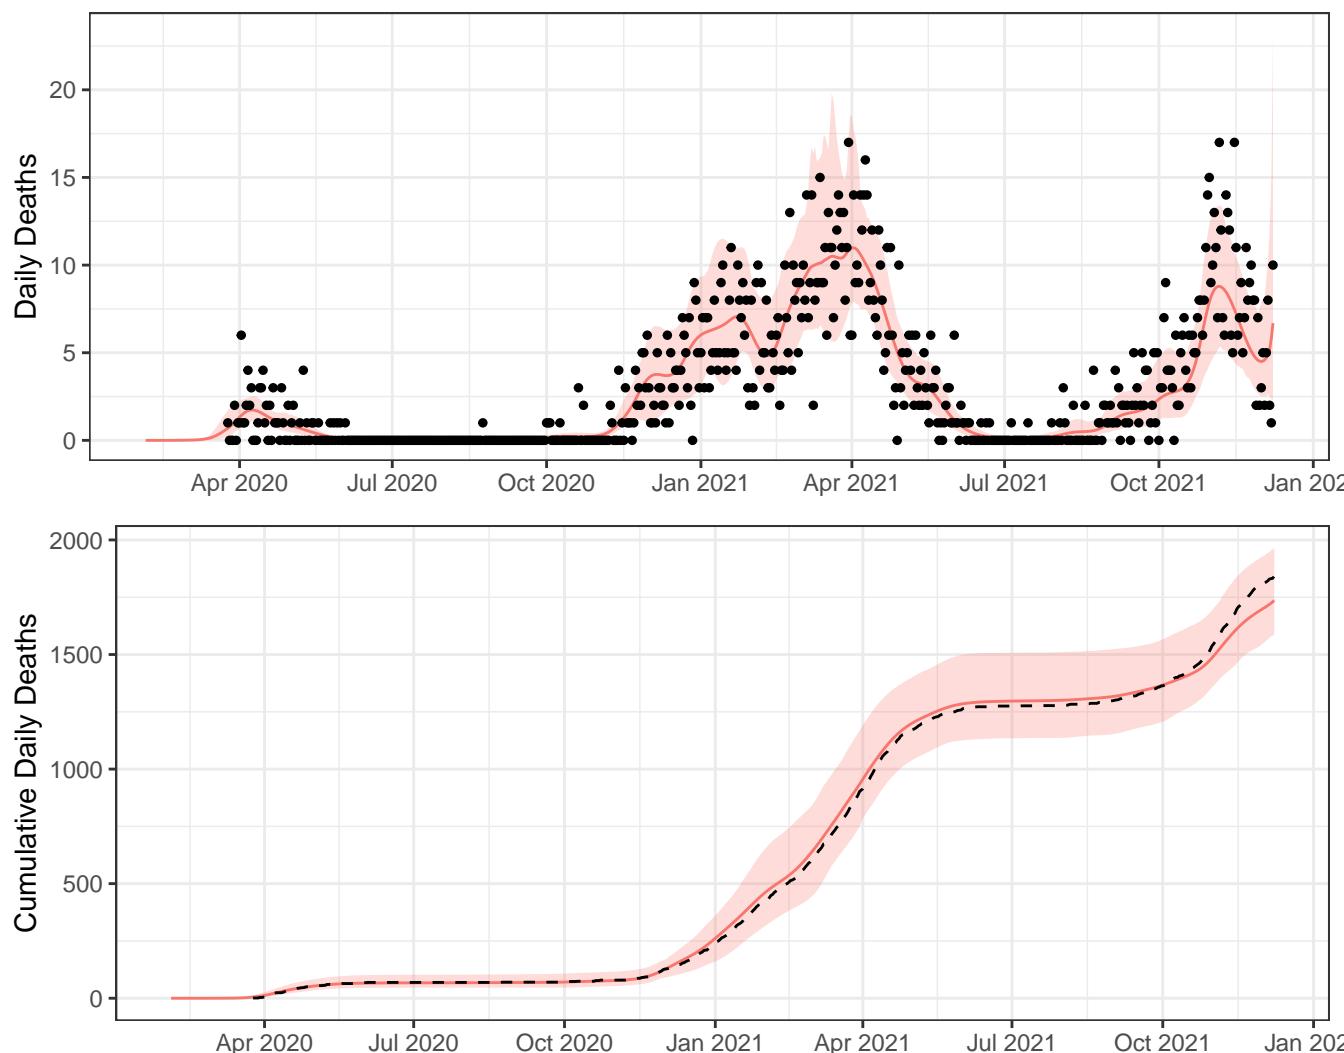

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Spain

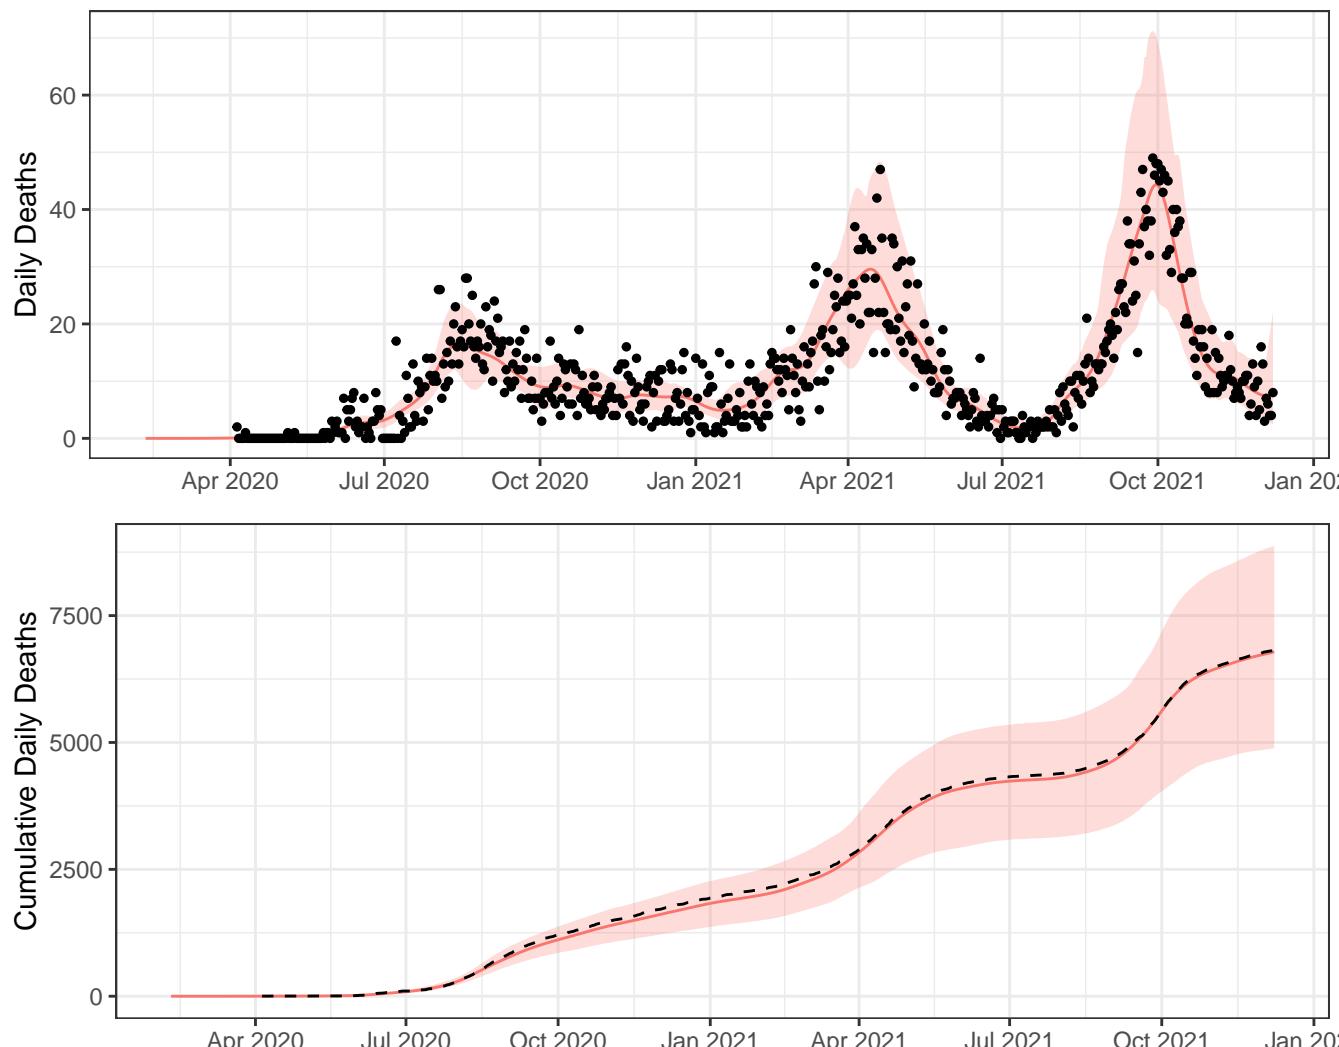

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Estonia

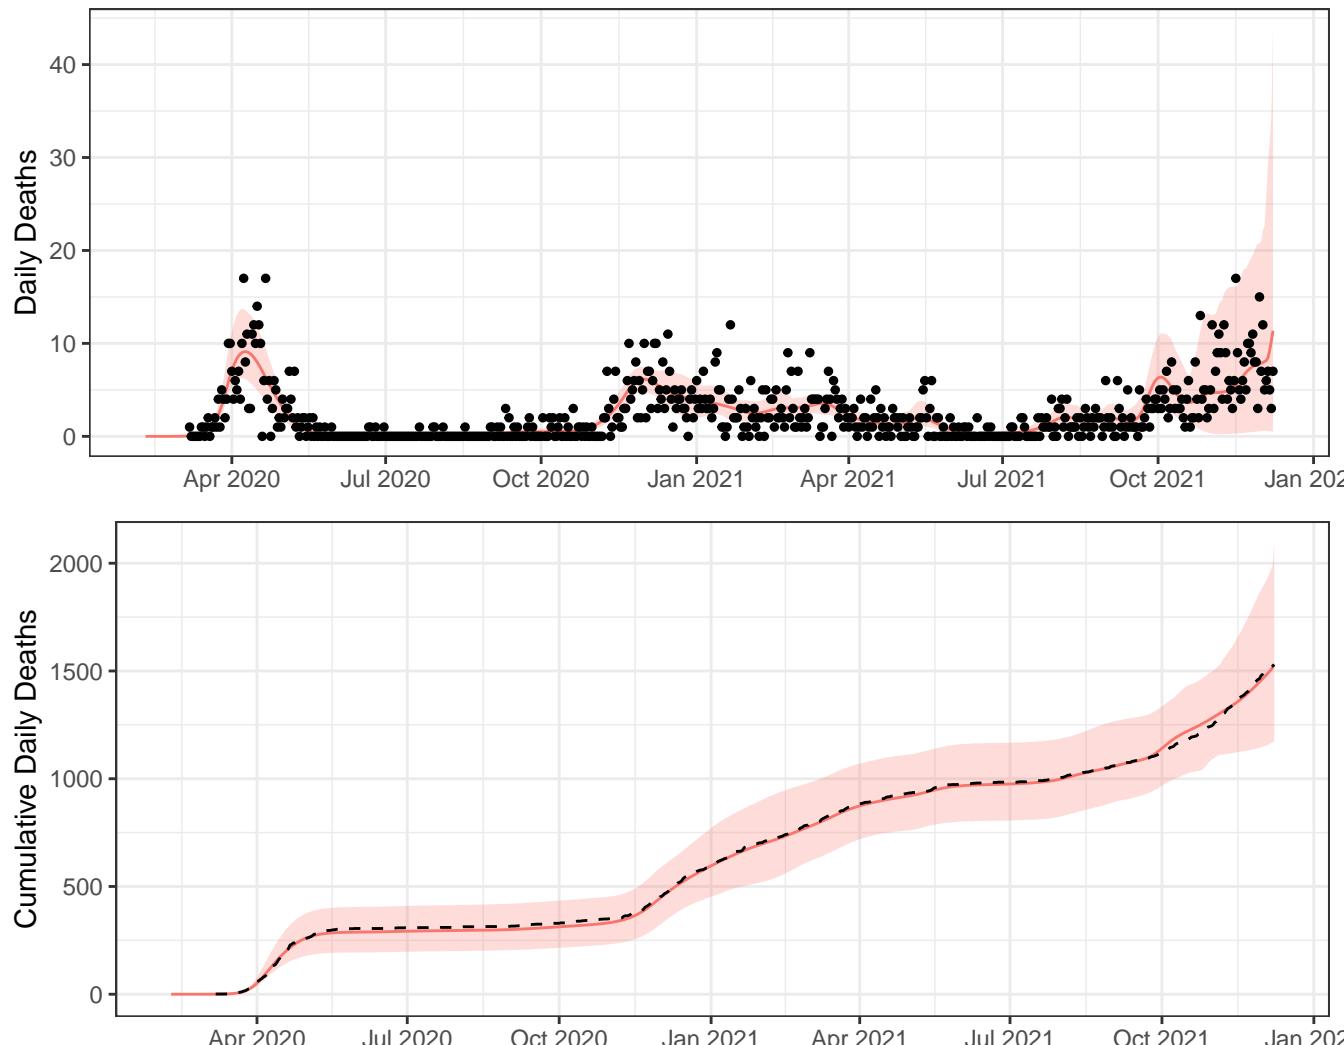

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Ethiopia

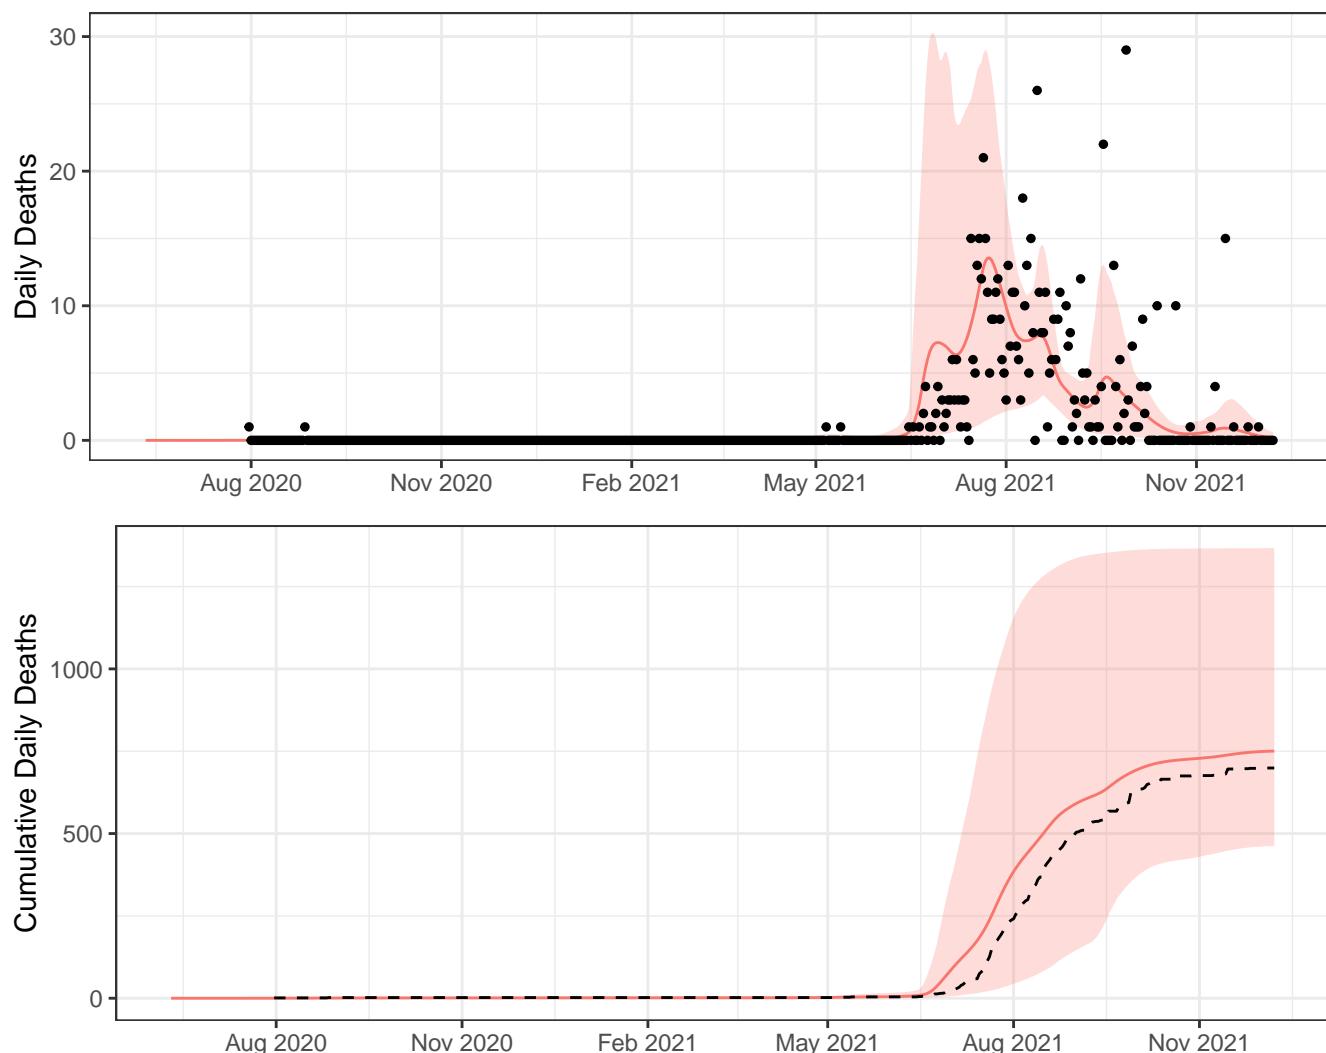

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Finland

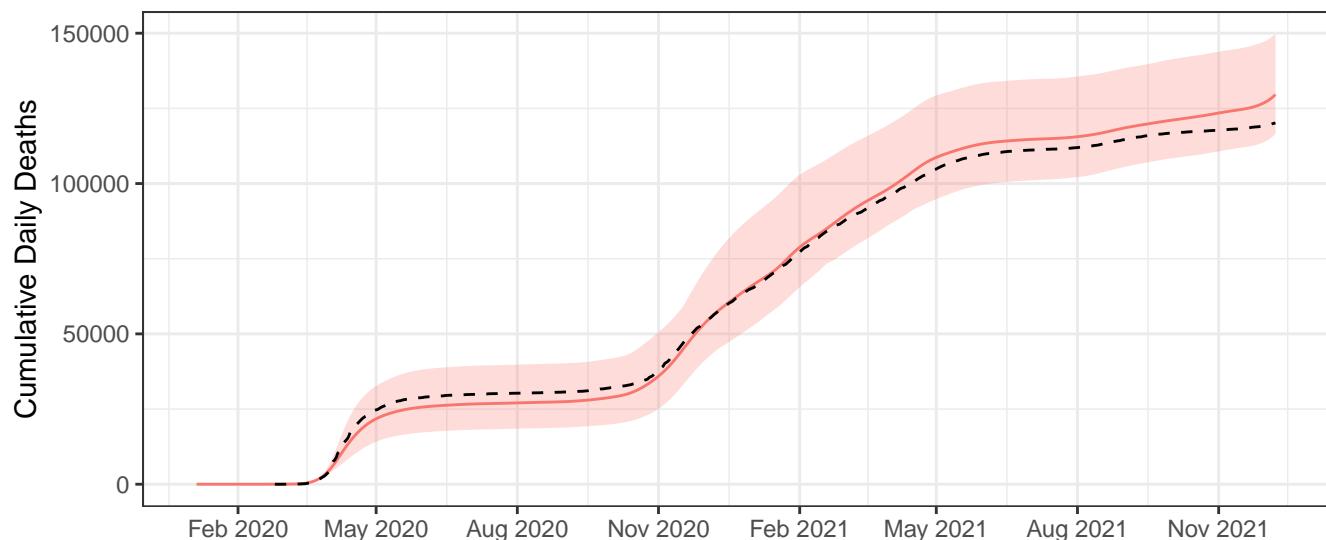

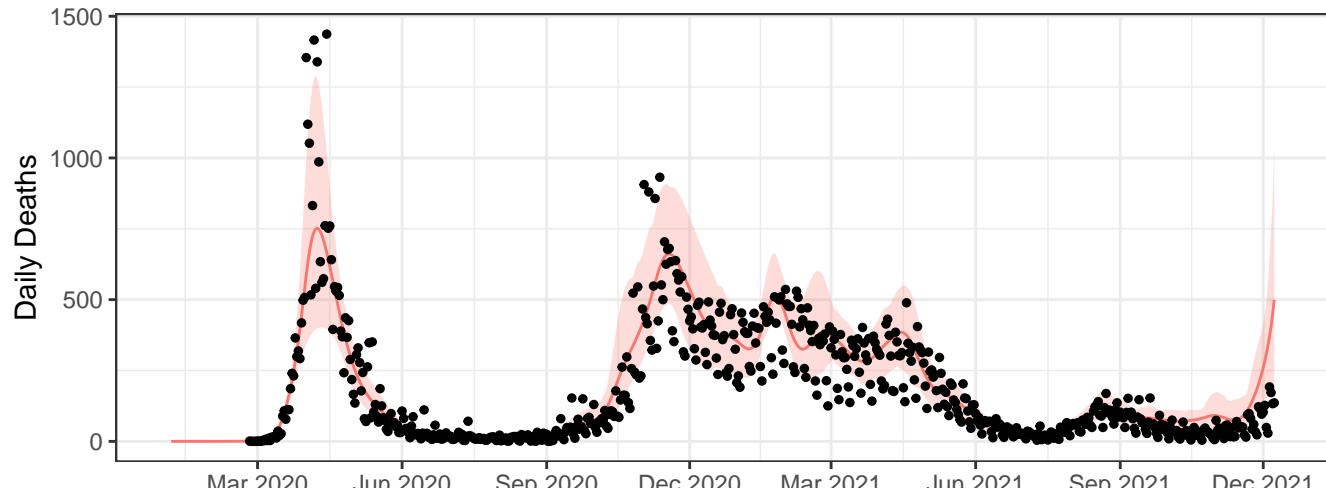

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Fiji

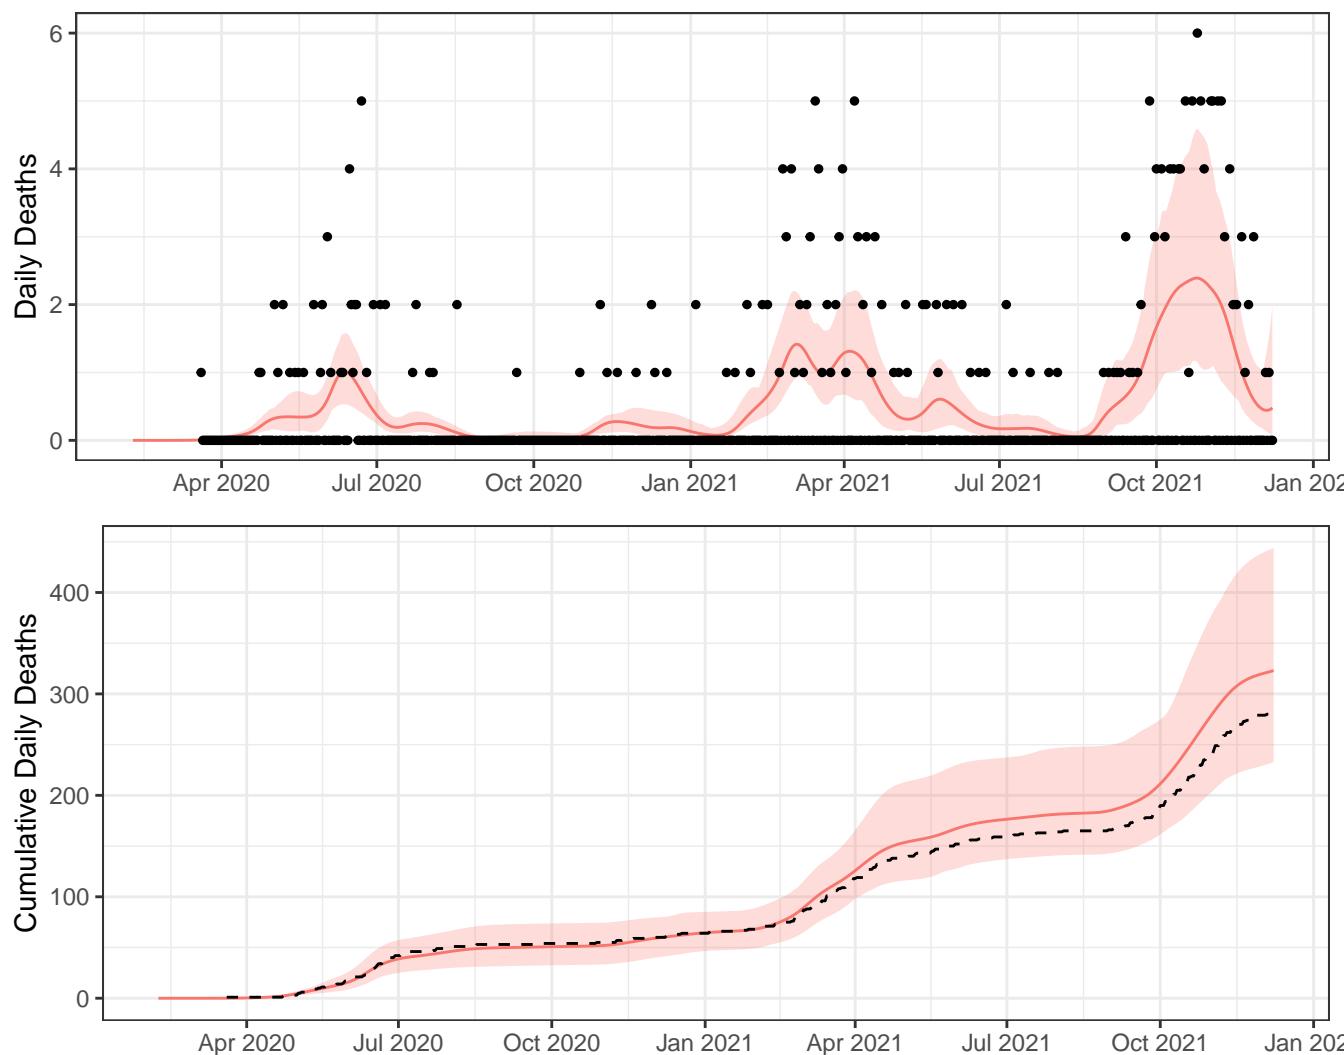

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

France

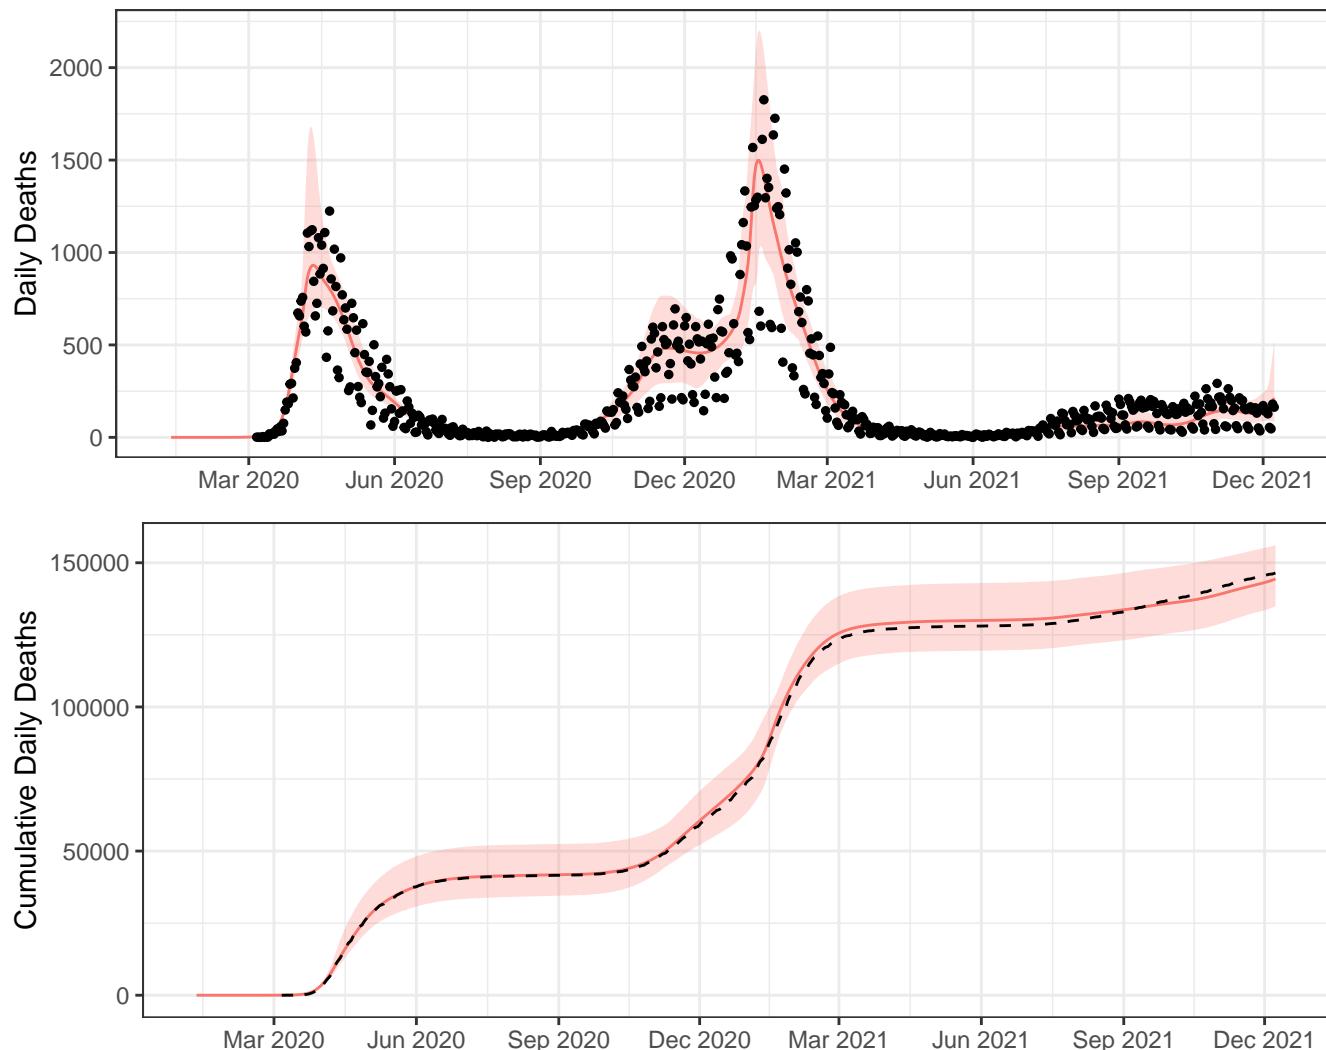

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Gabon

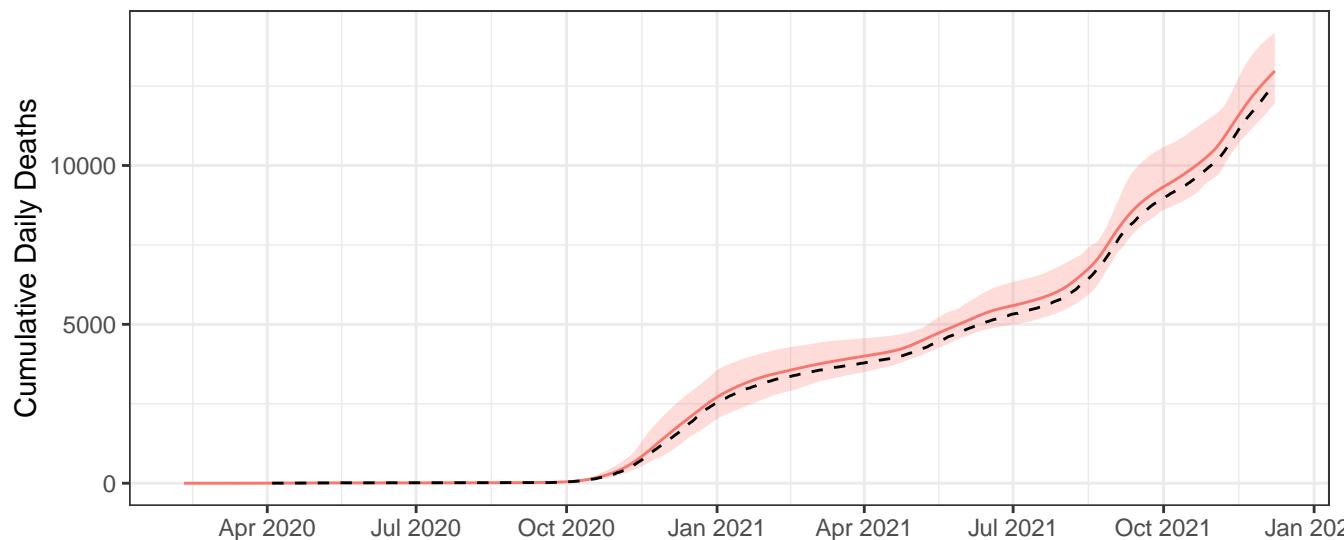

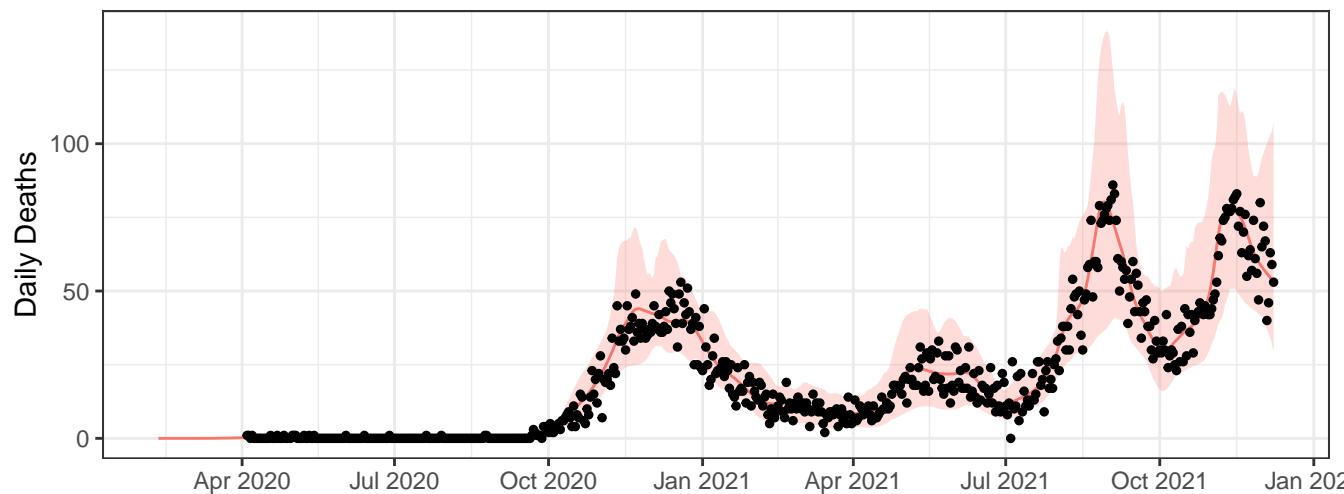

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# United Kingdom

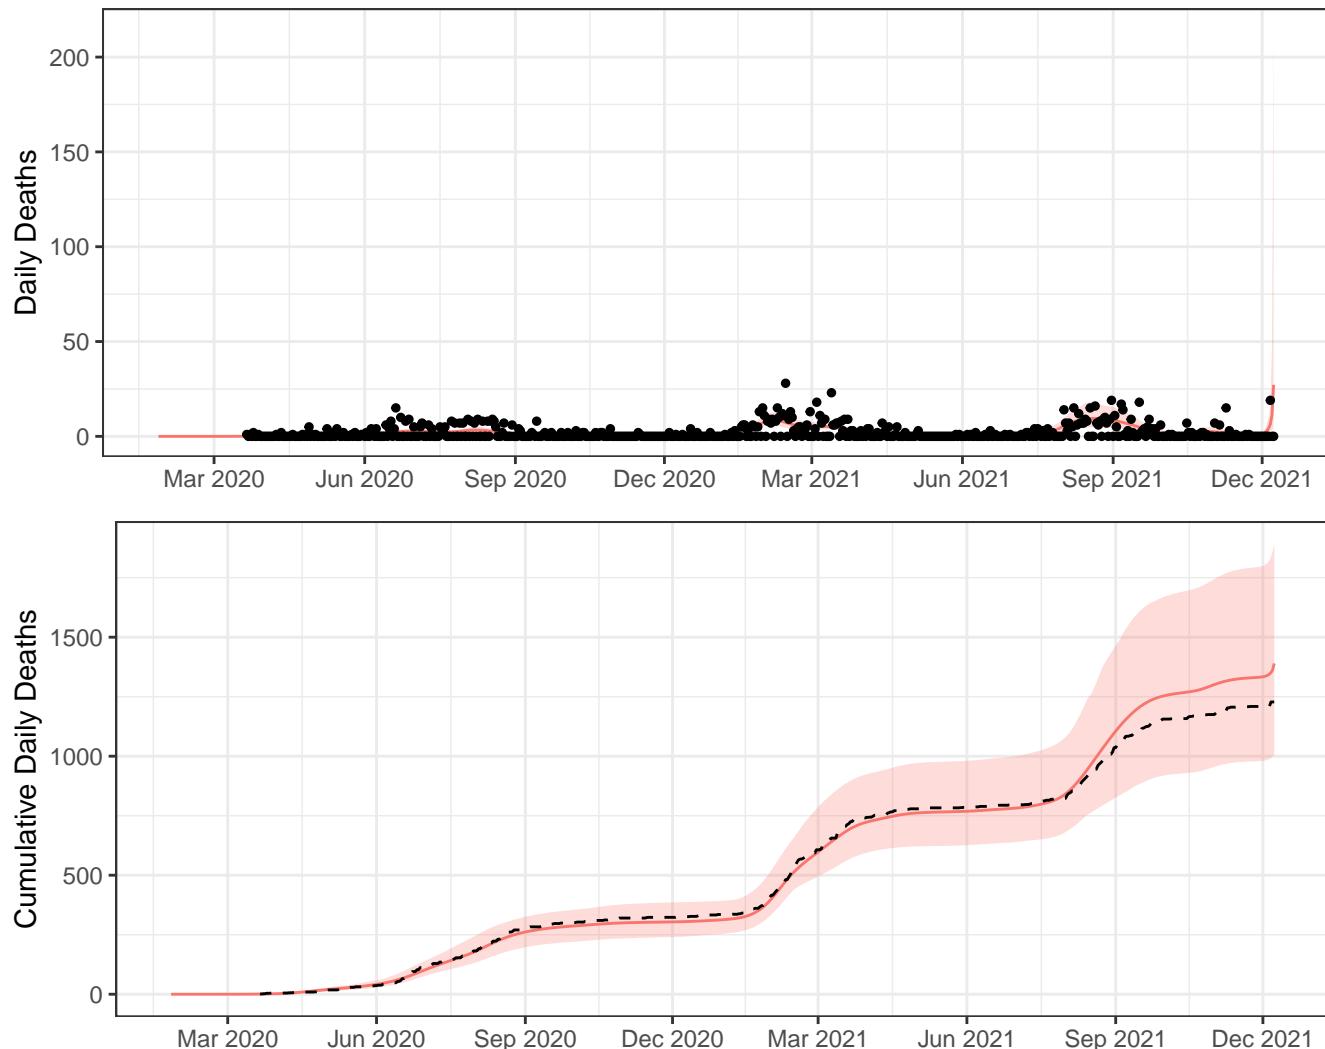

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Georgia

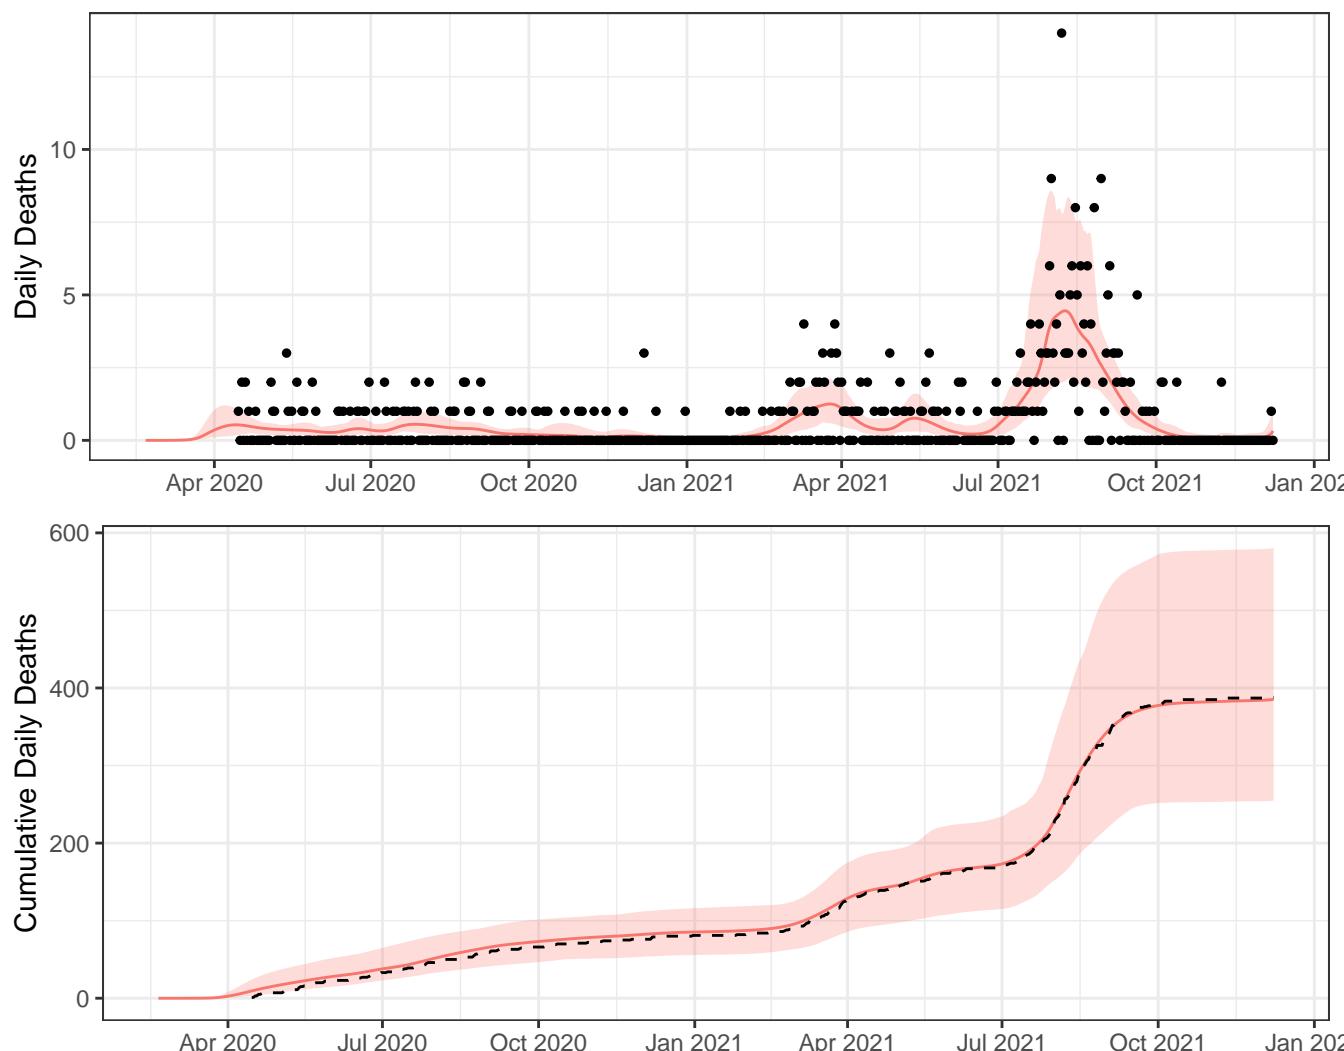

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Ghana

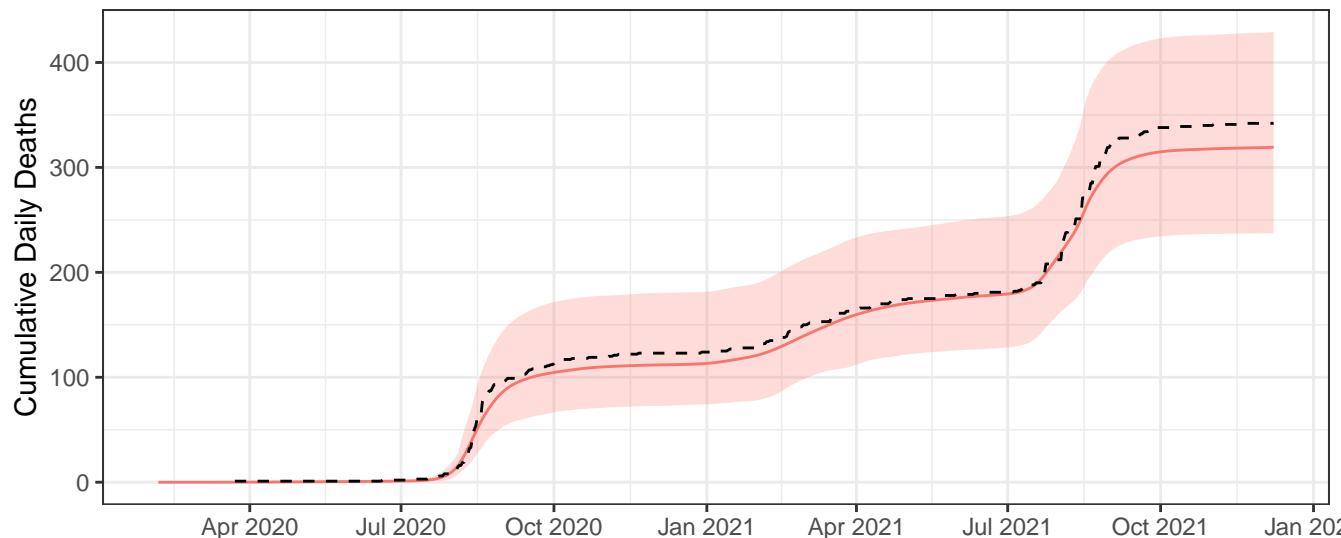

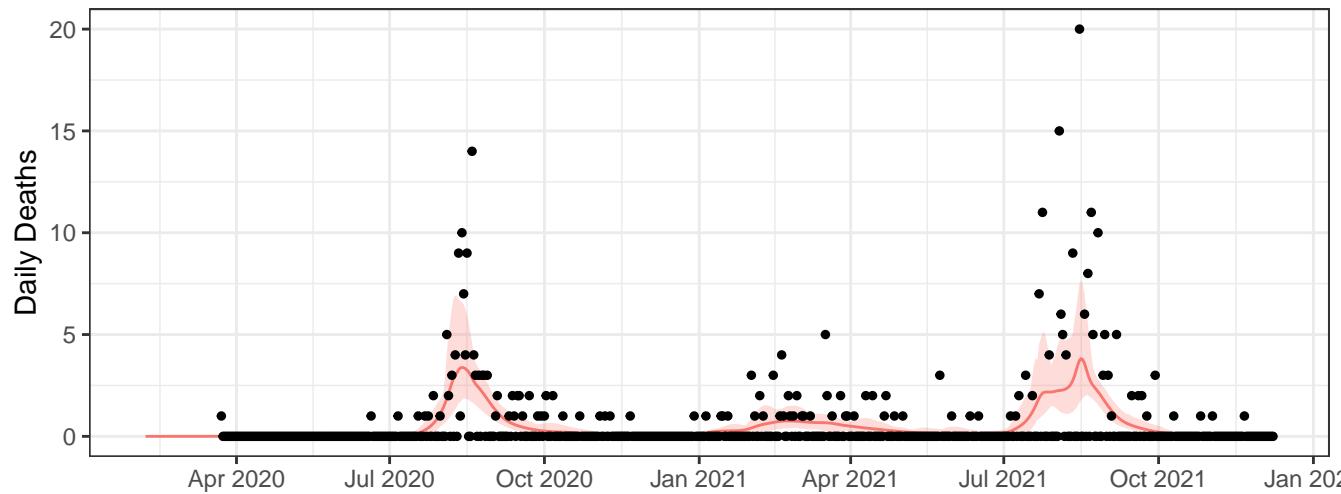

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Guinea

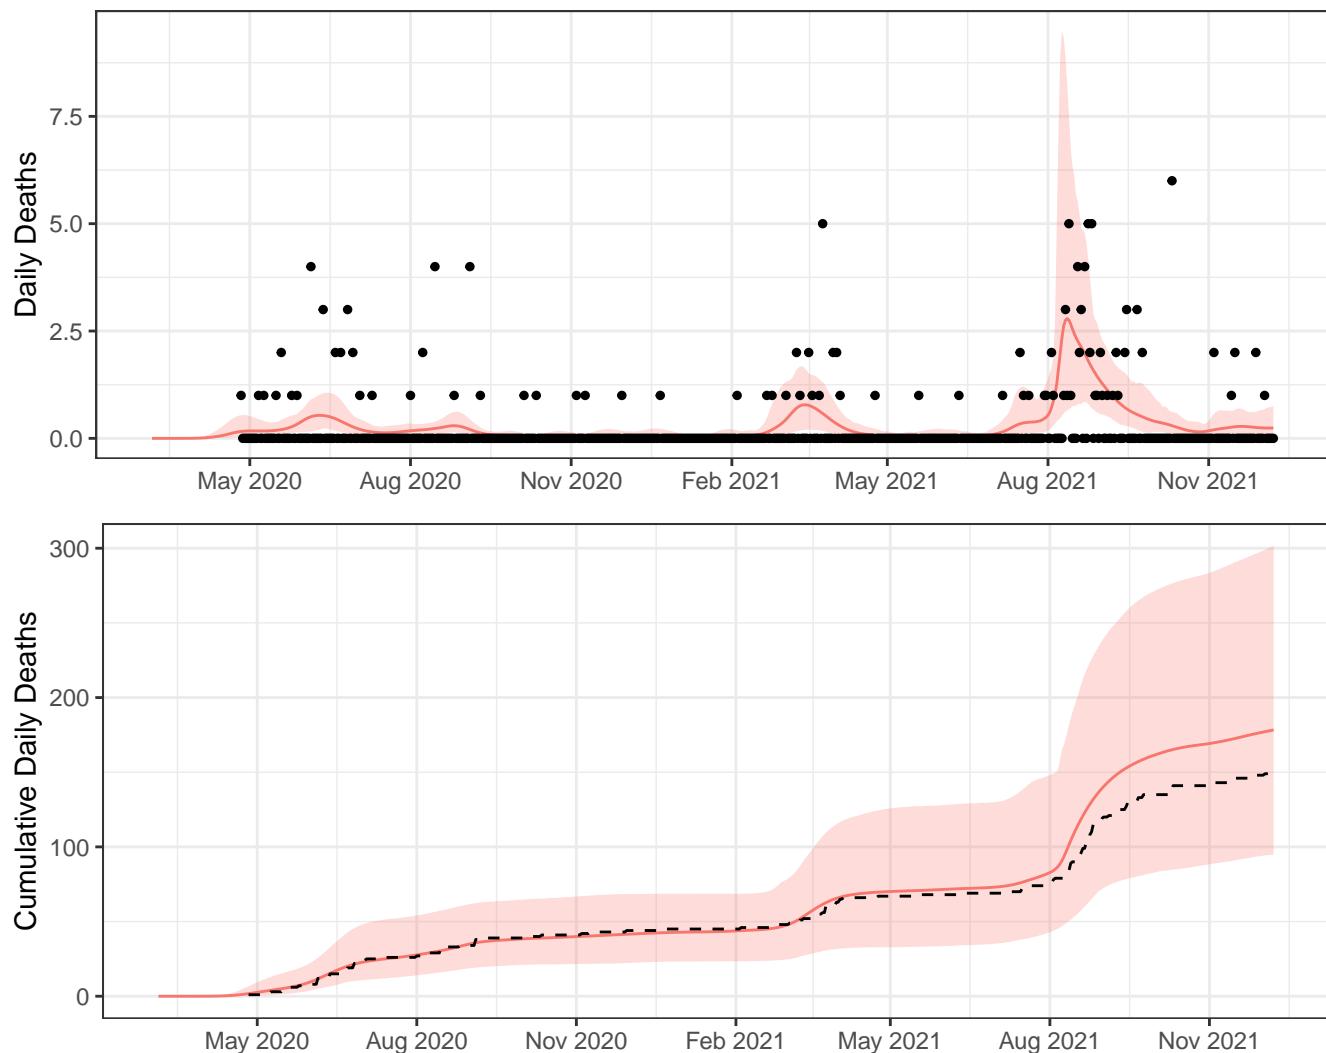

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Gambia

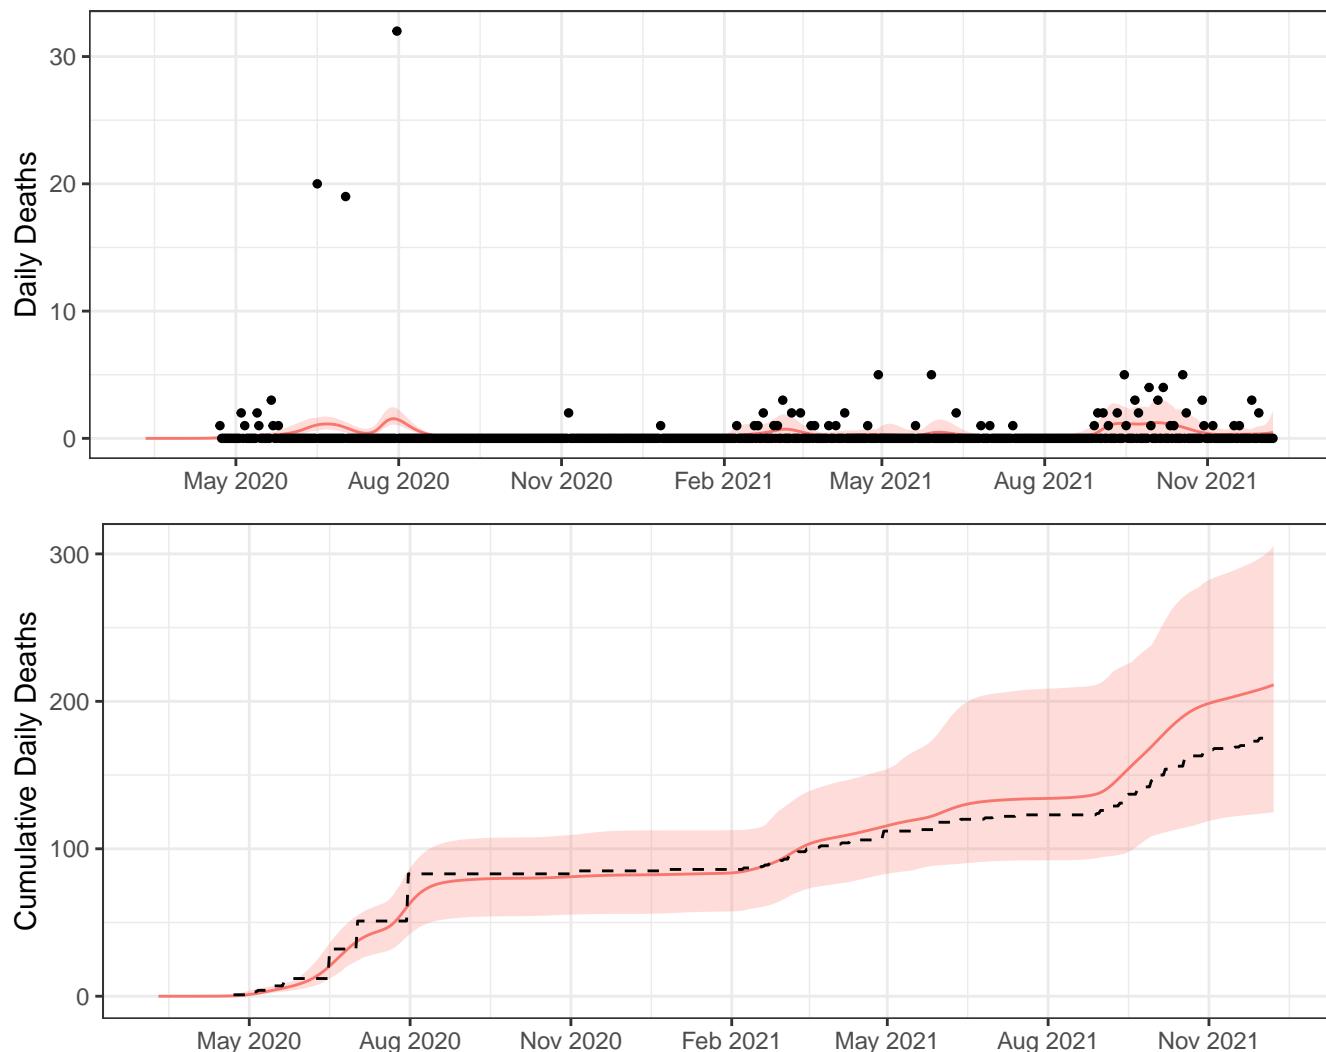

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Guinea-Bissau

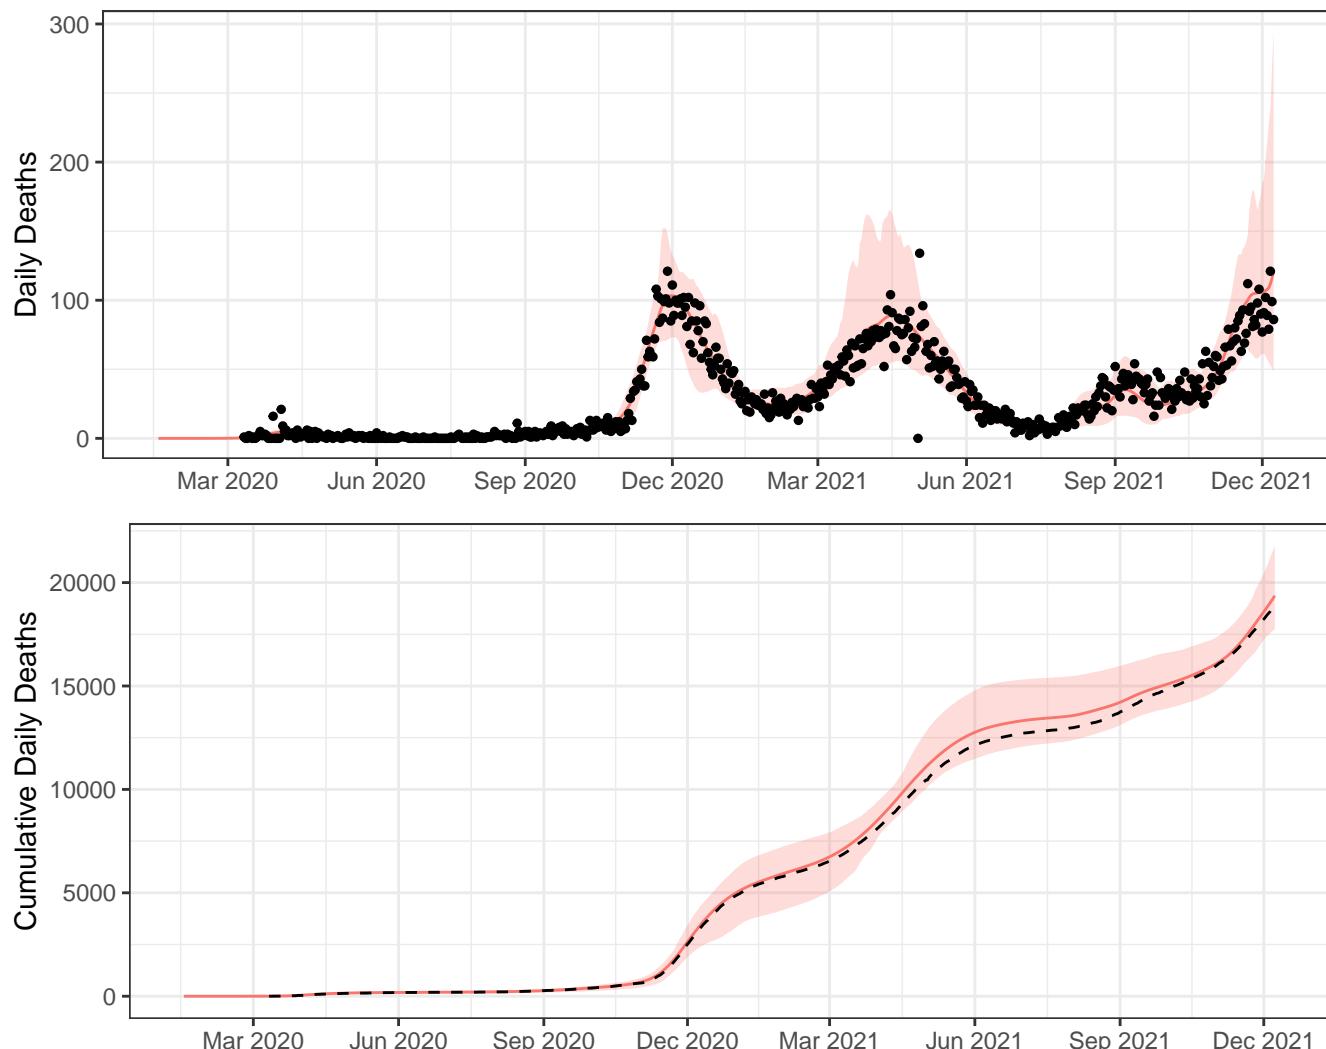

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Equatorial Guinea

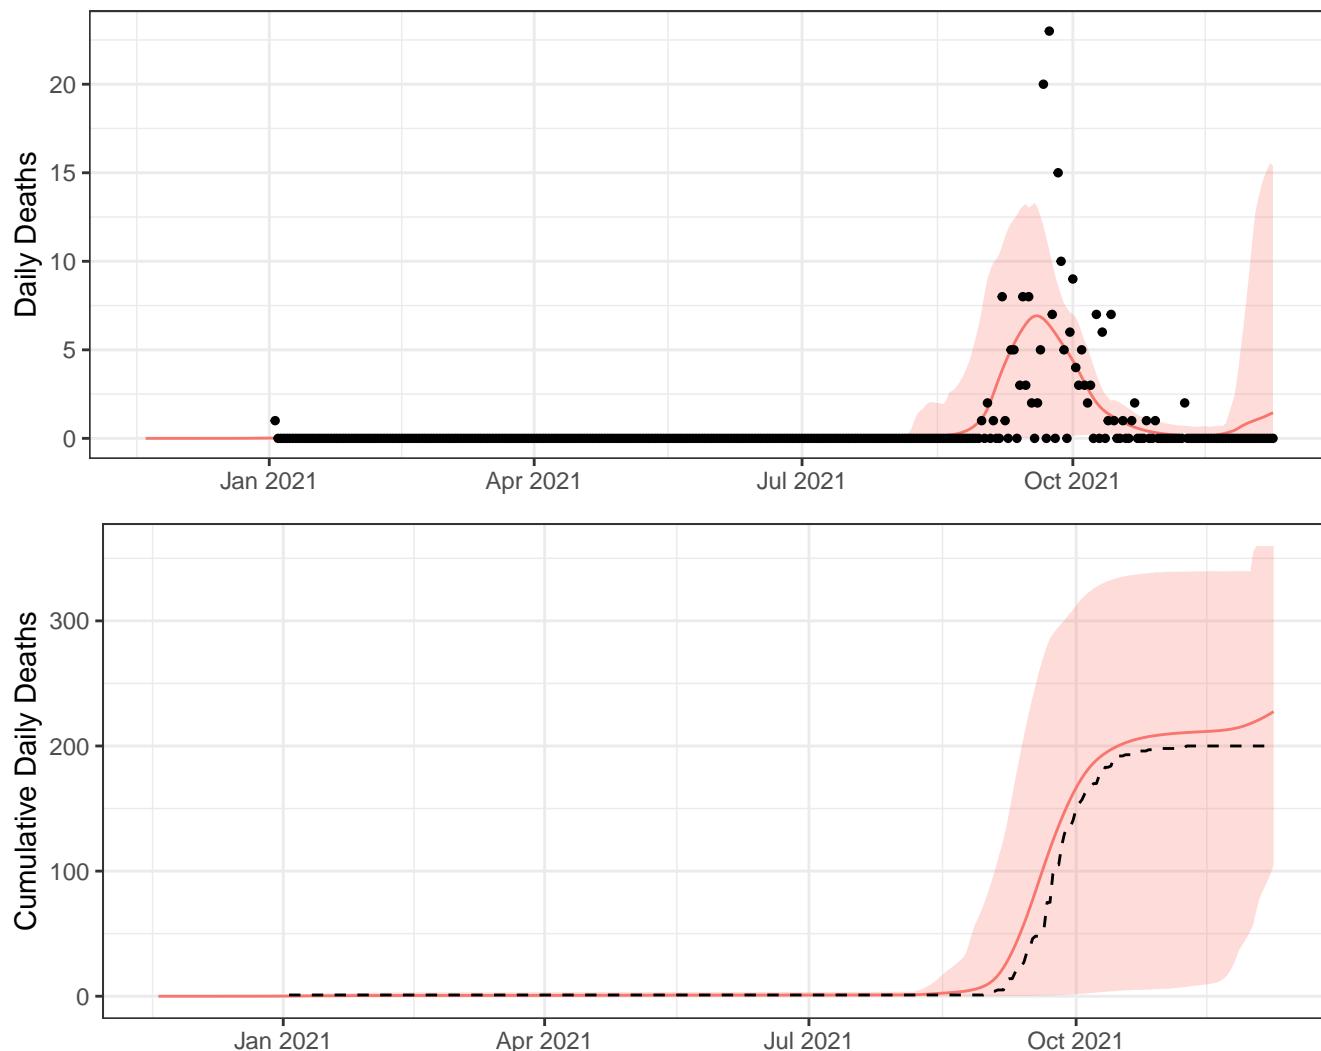

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Greece

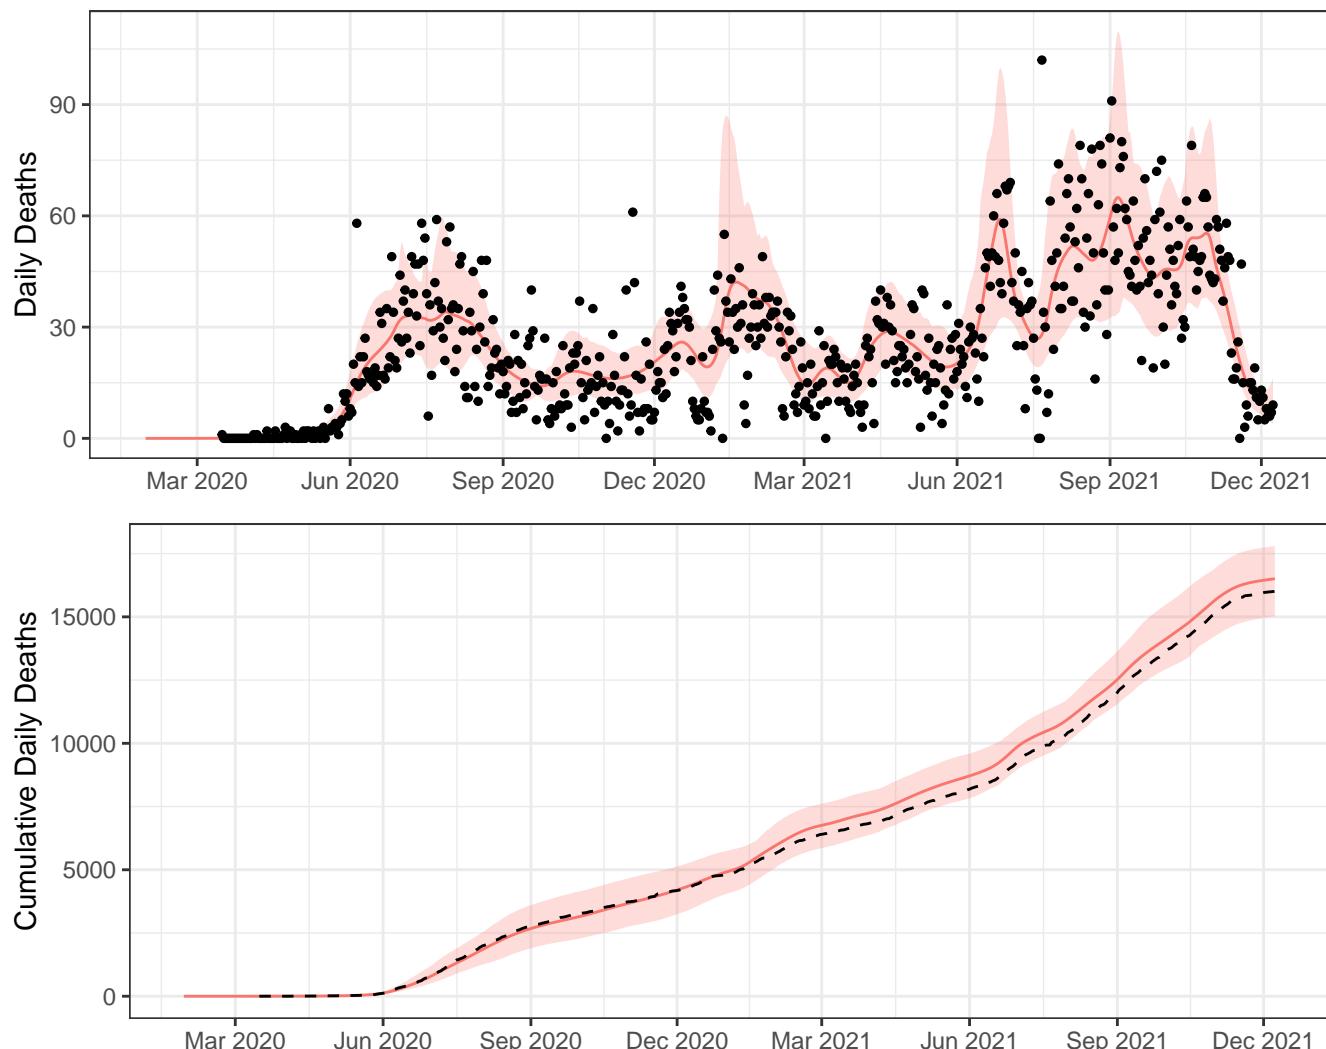

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Grenada

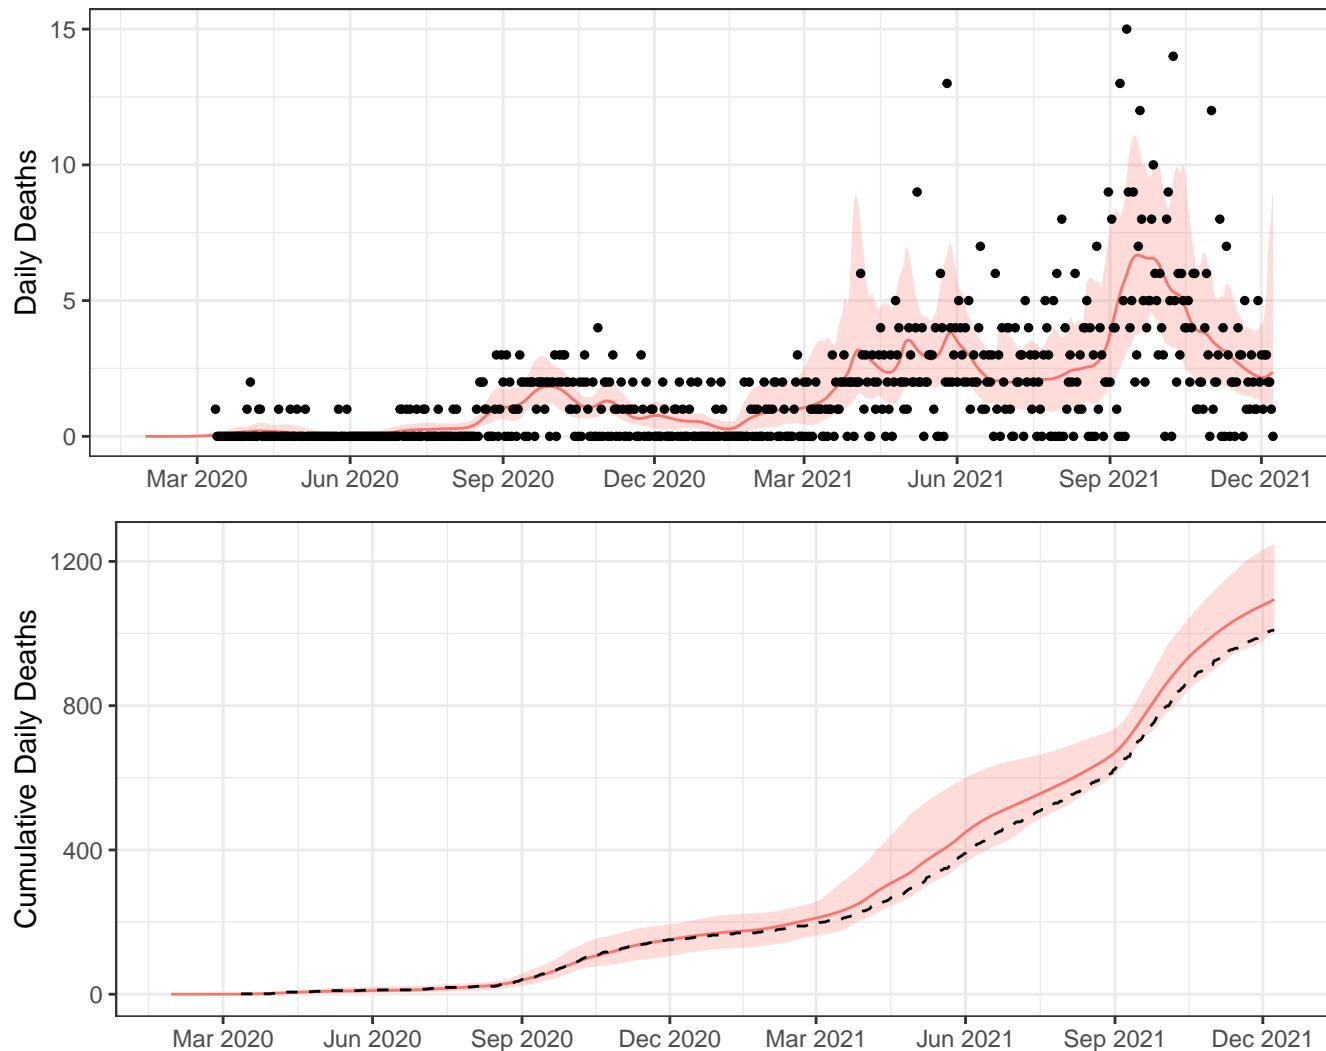

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Guatemala

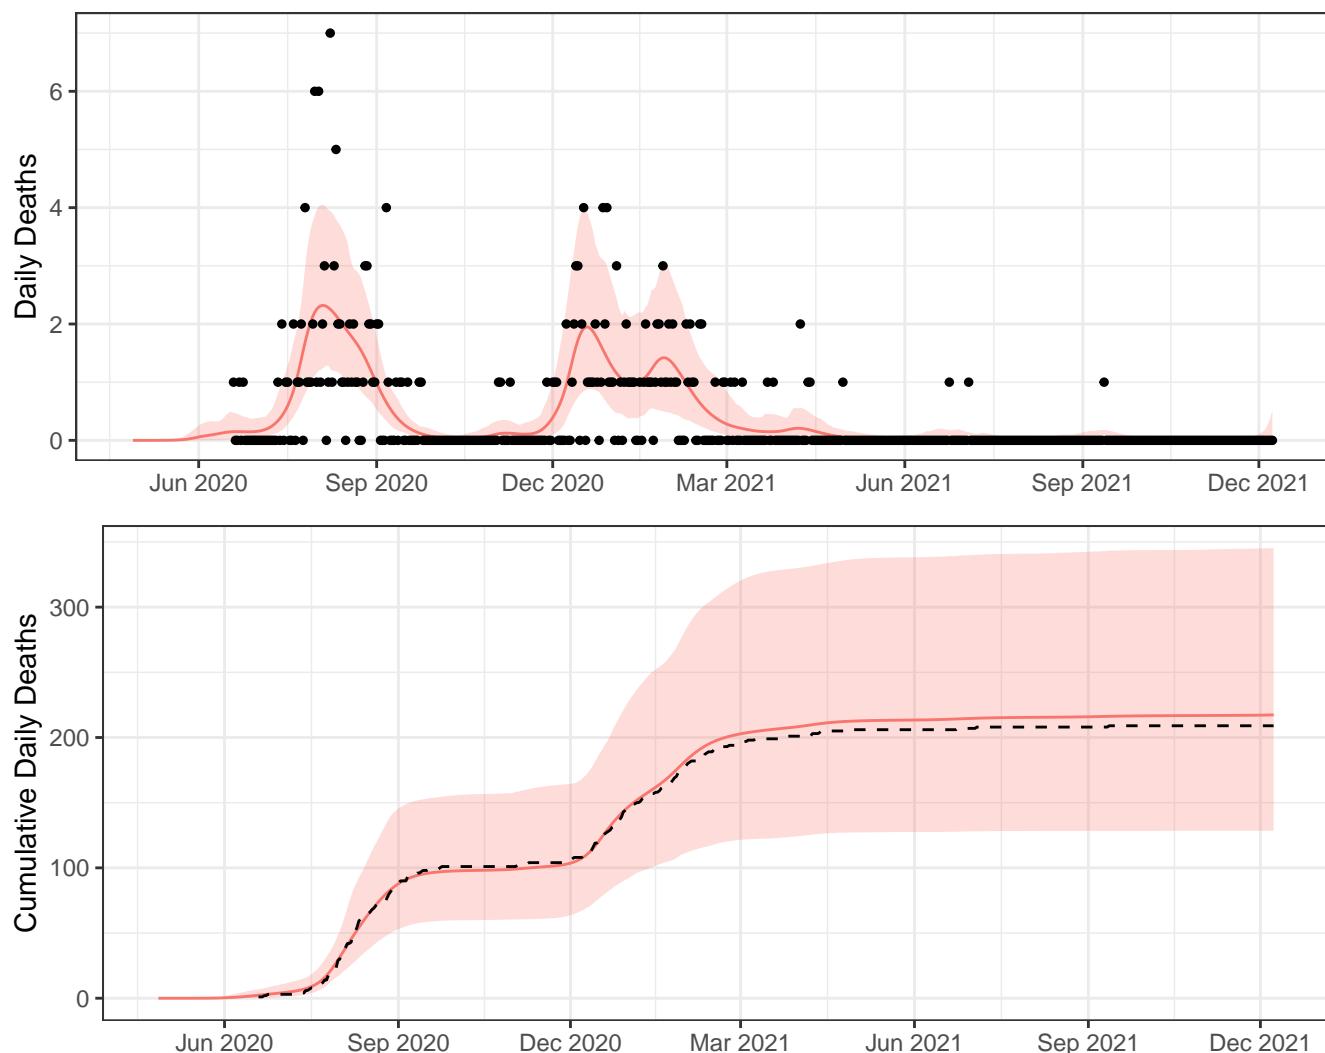

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Guyana

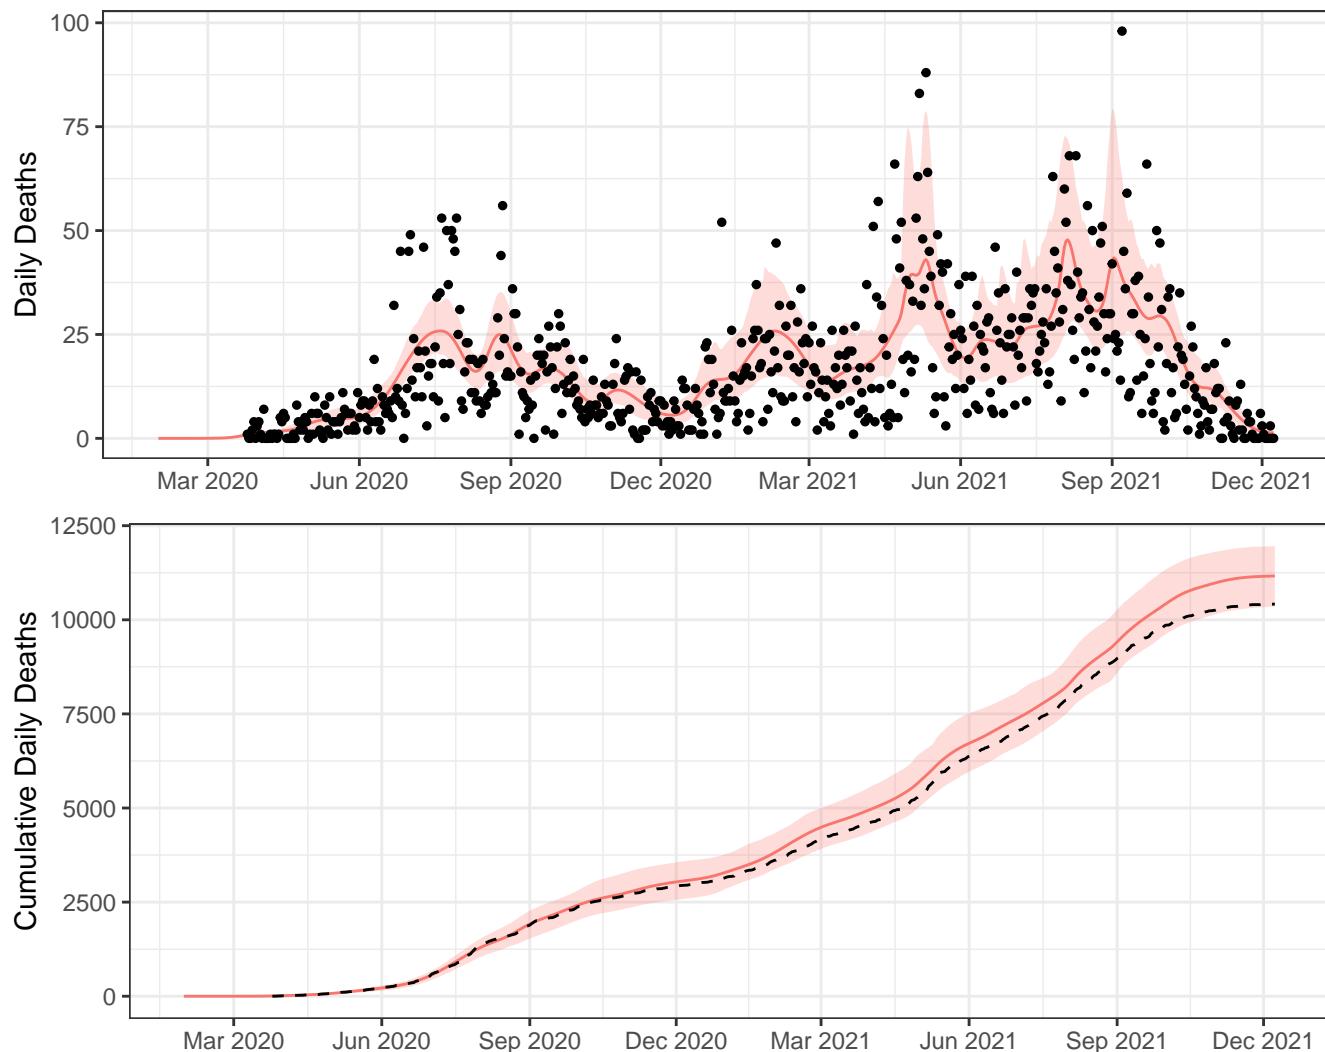

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Hong Kong SAR, China

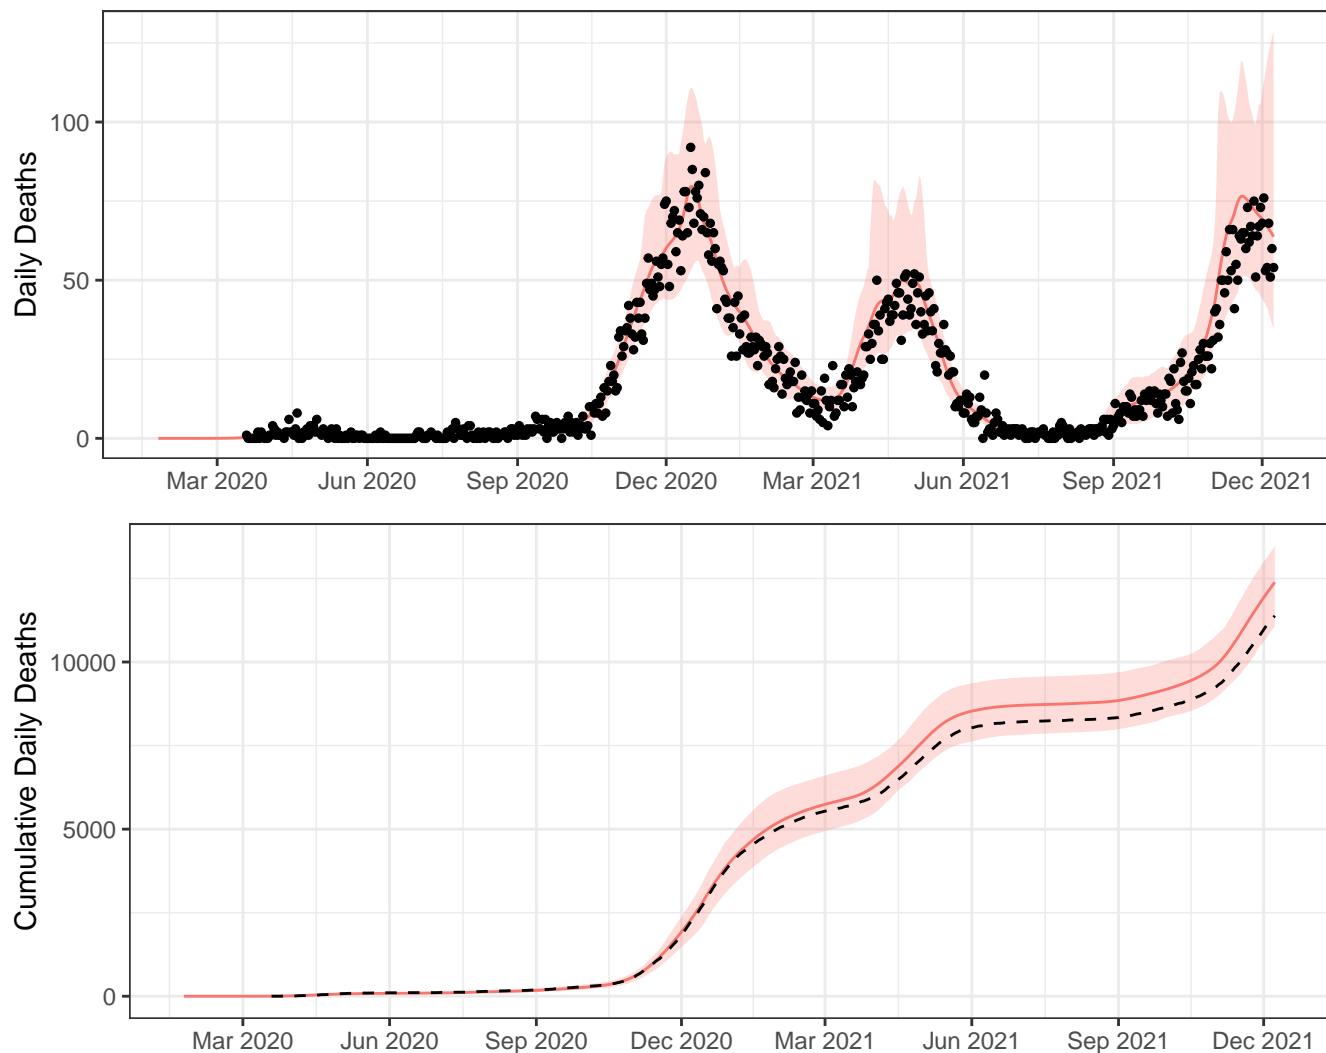

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Honduras

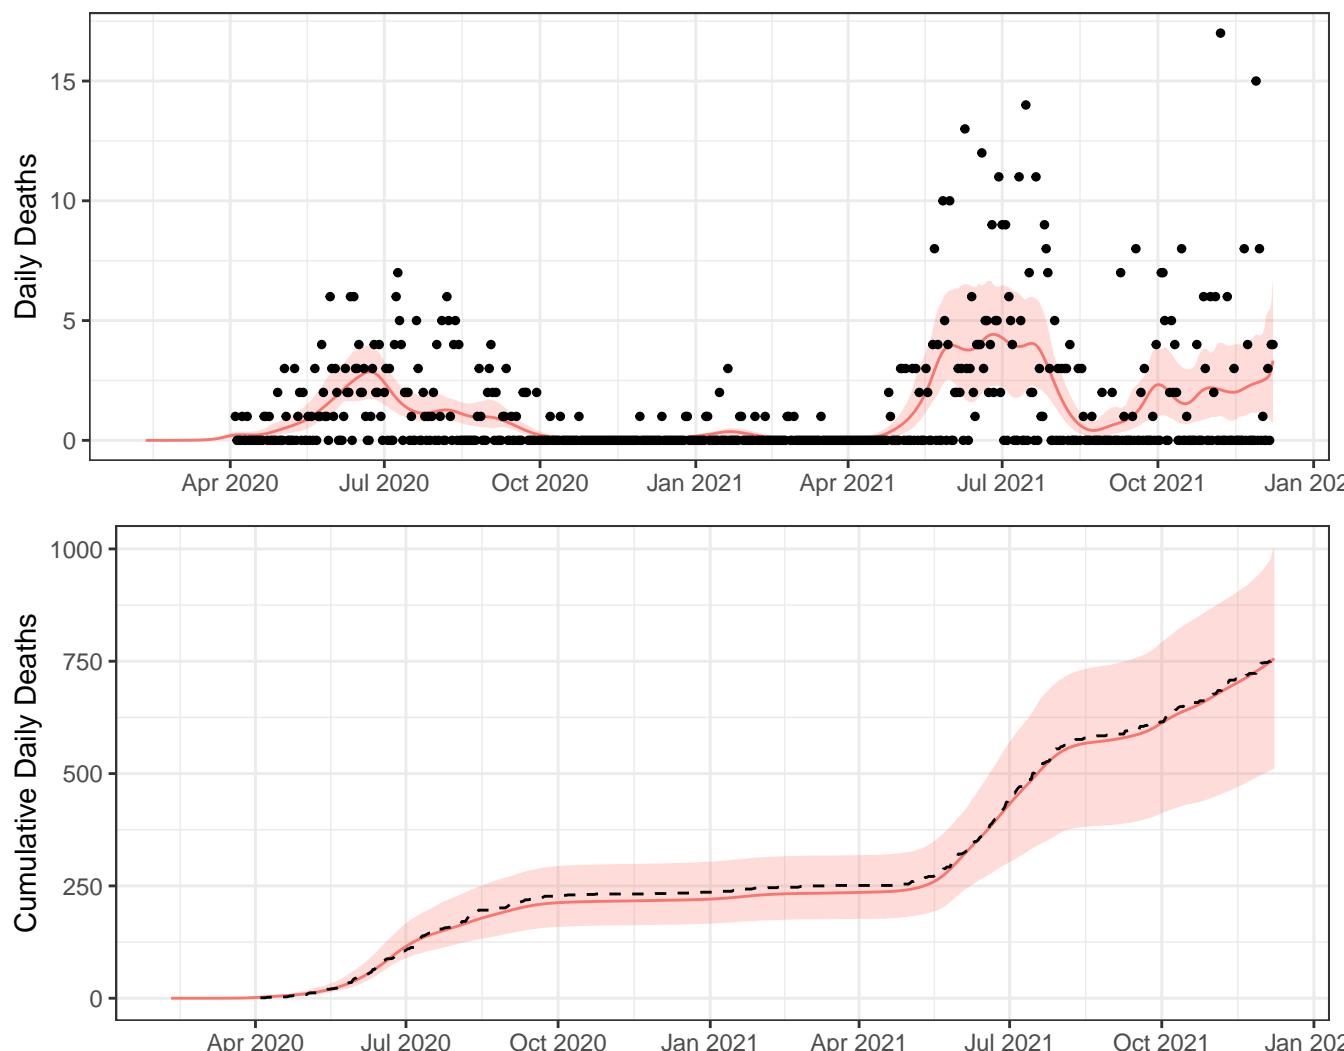

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Croatia

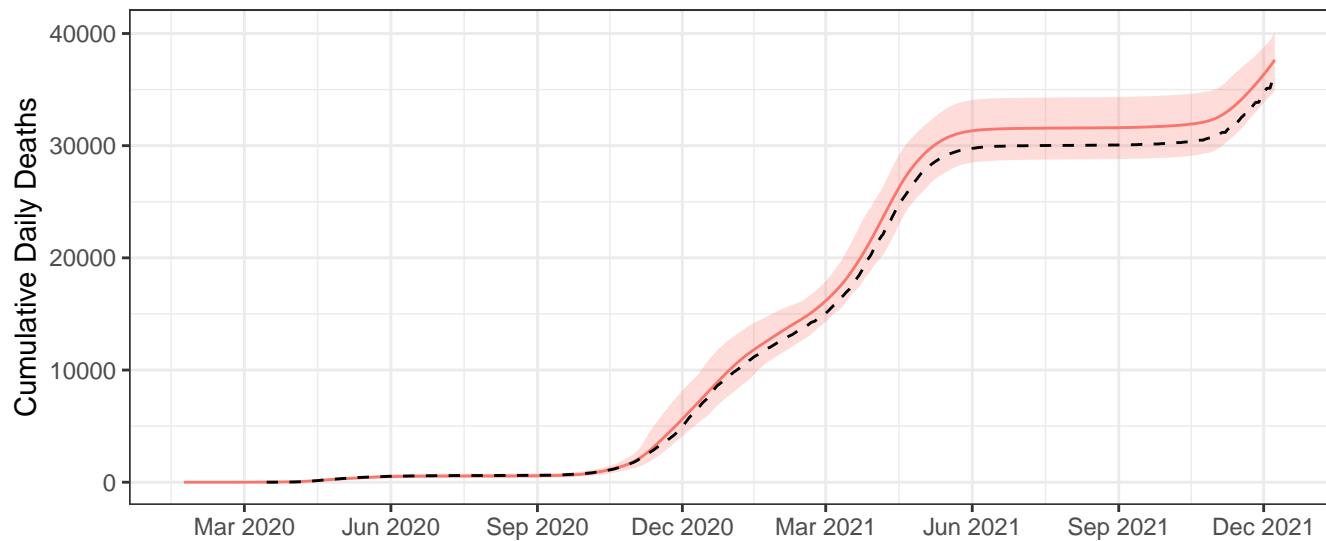

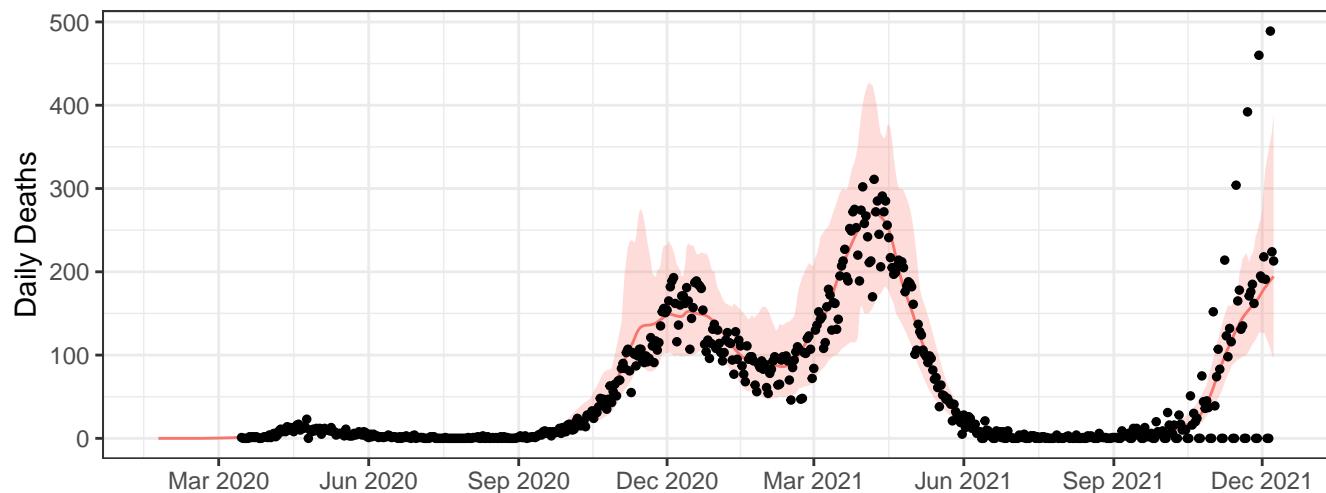

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Haiti

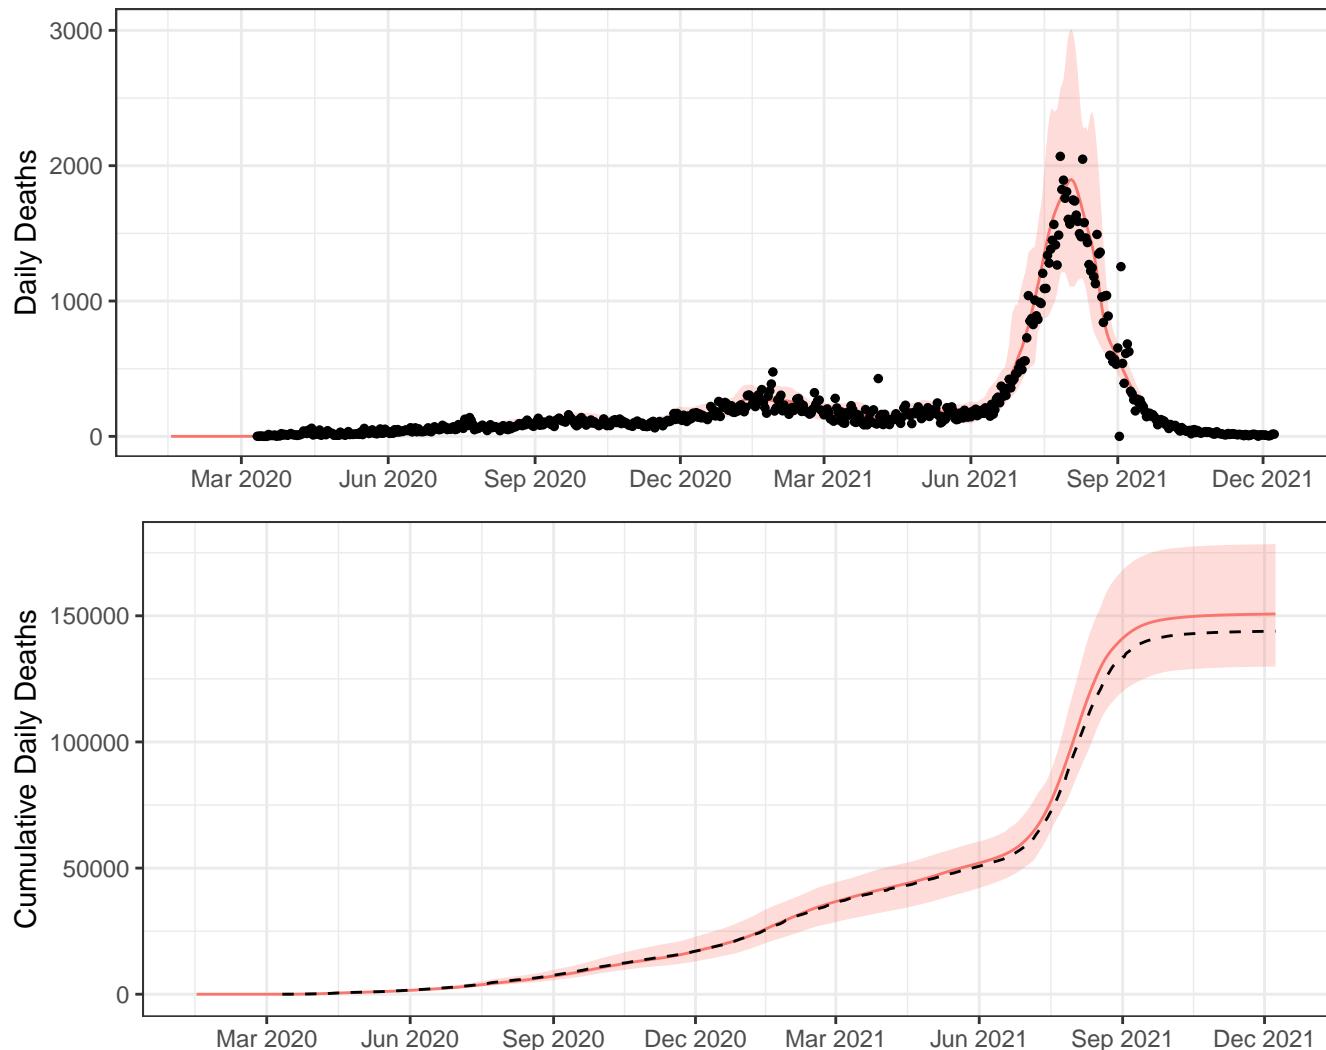

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Hungary

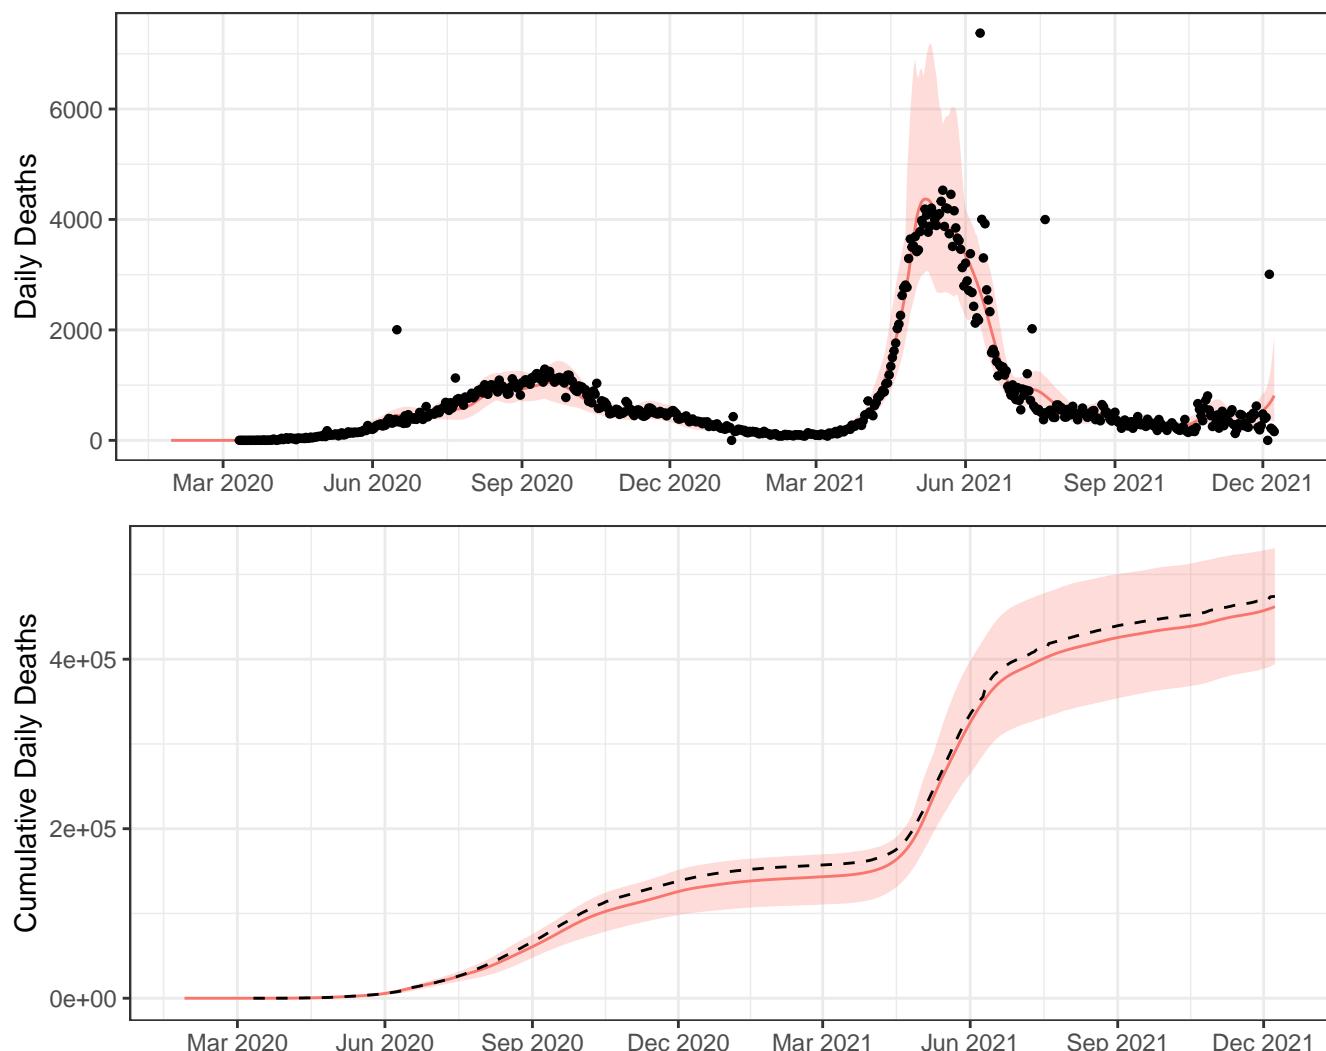

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Indonesia

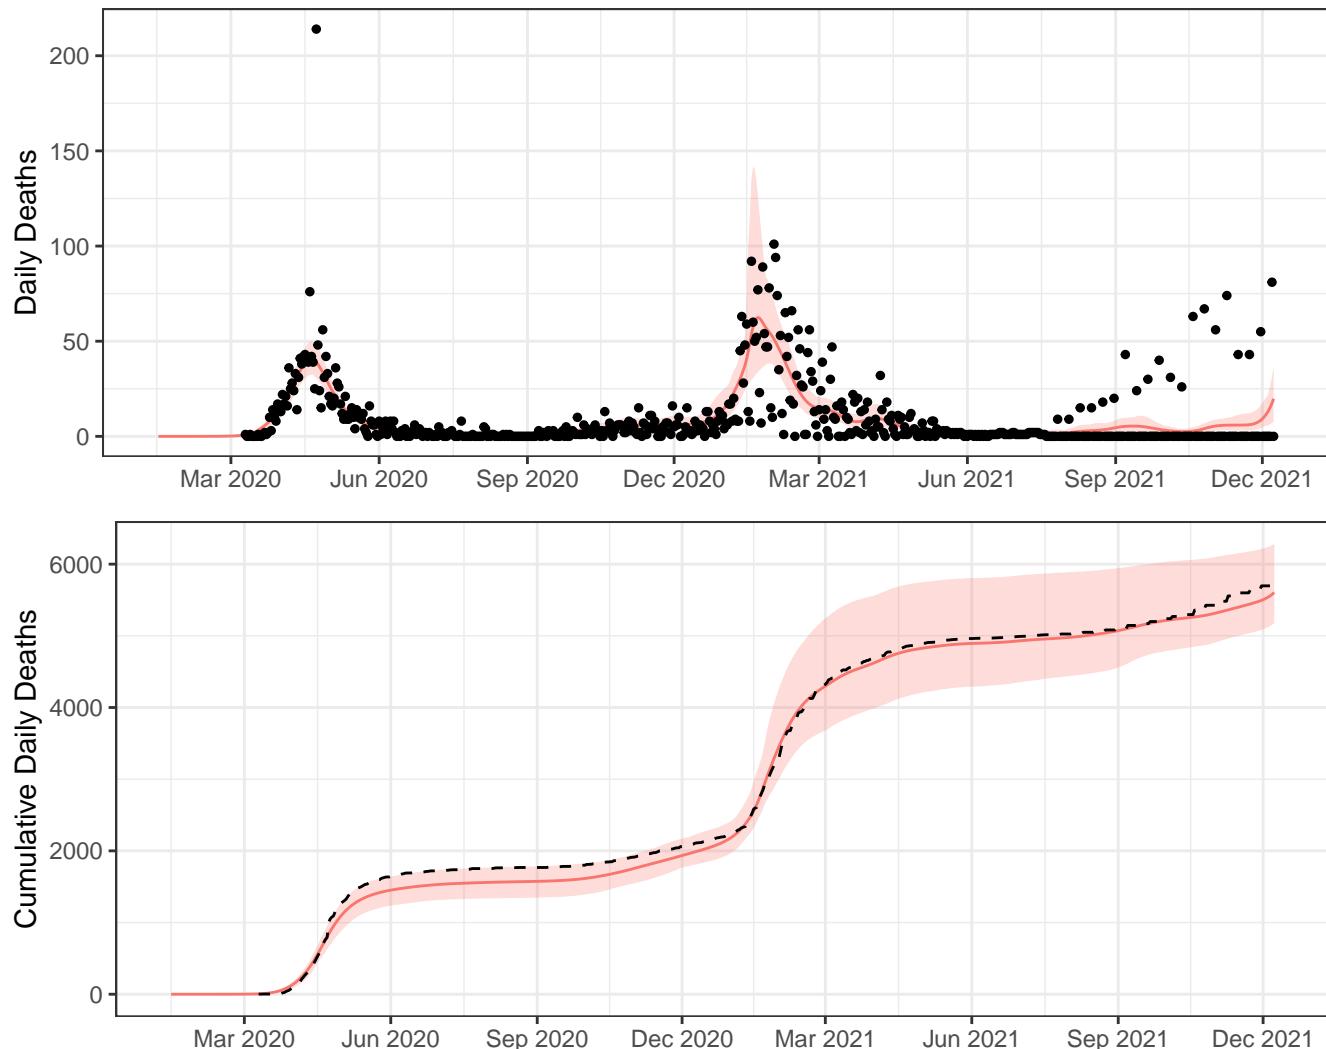

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

India

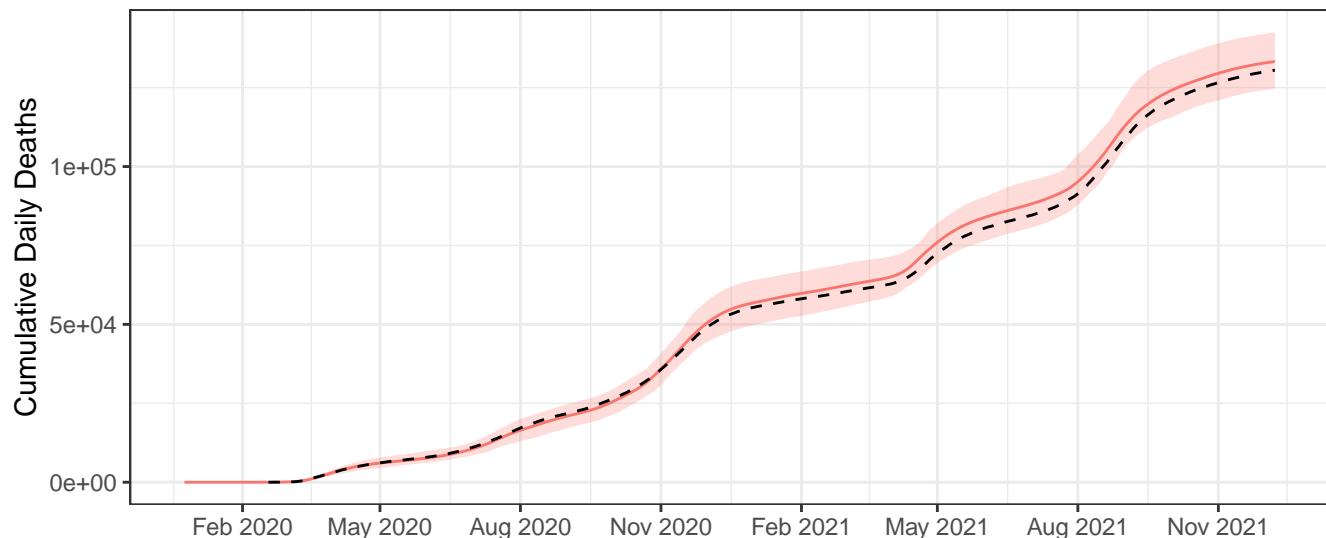

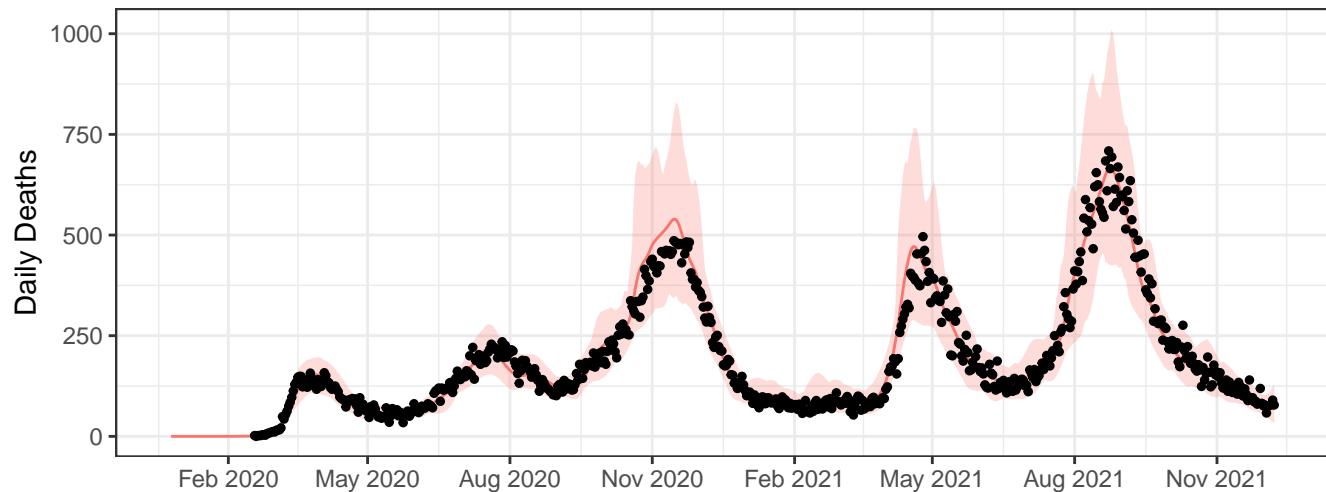

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Ireland

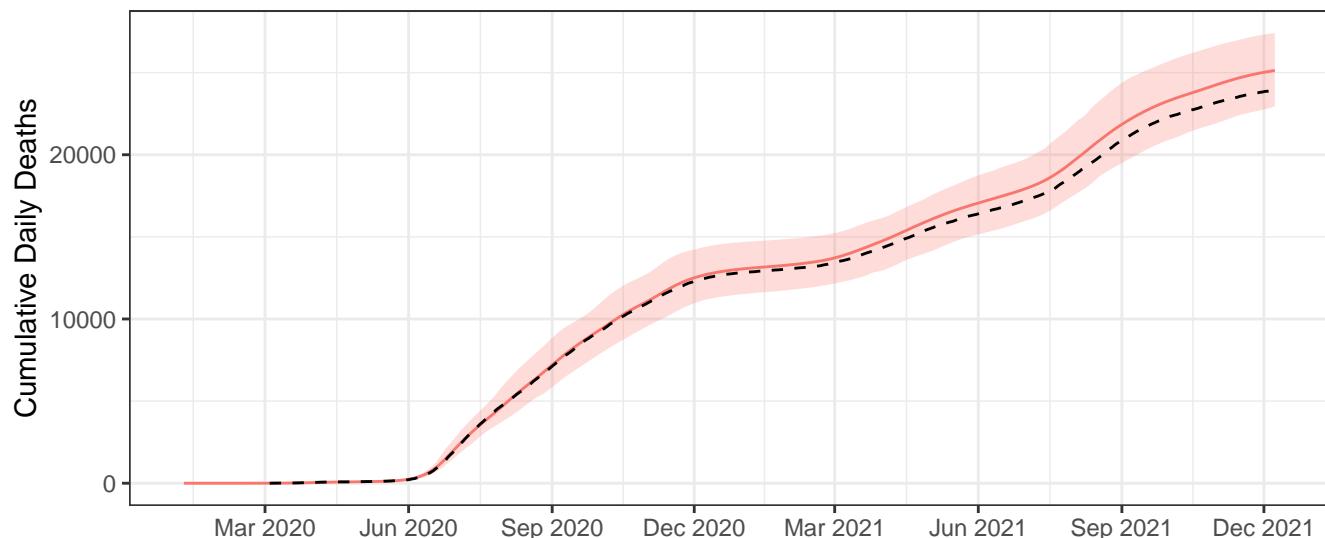

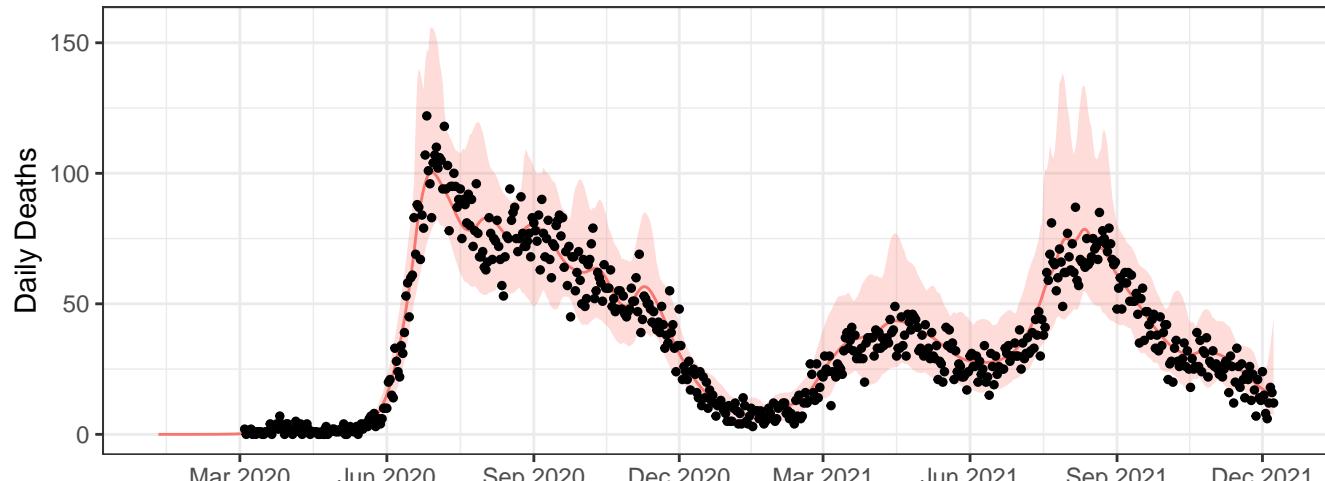

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Iran

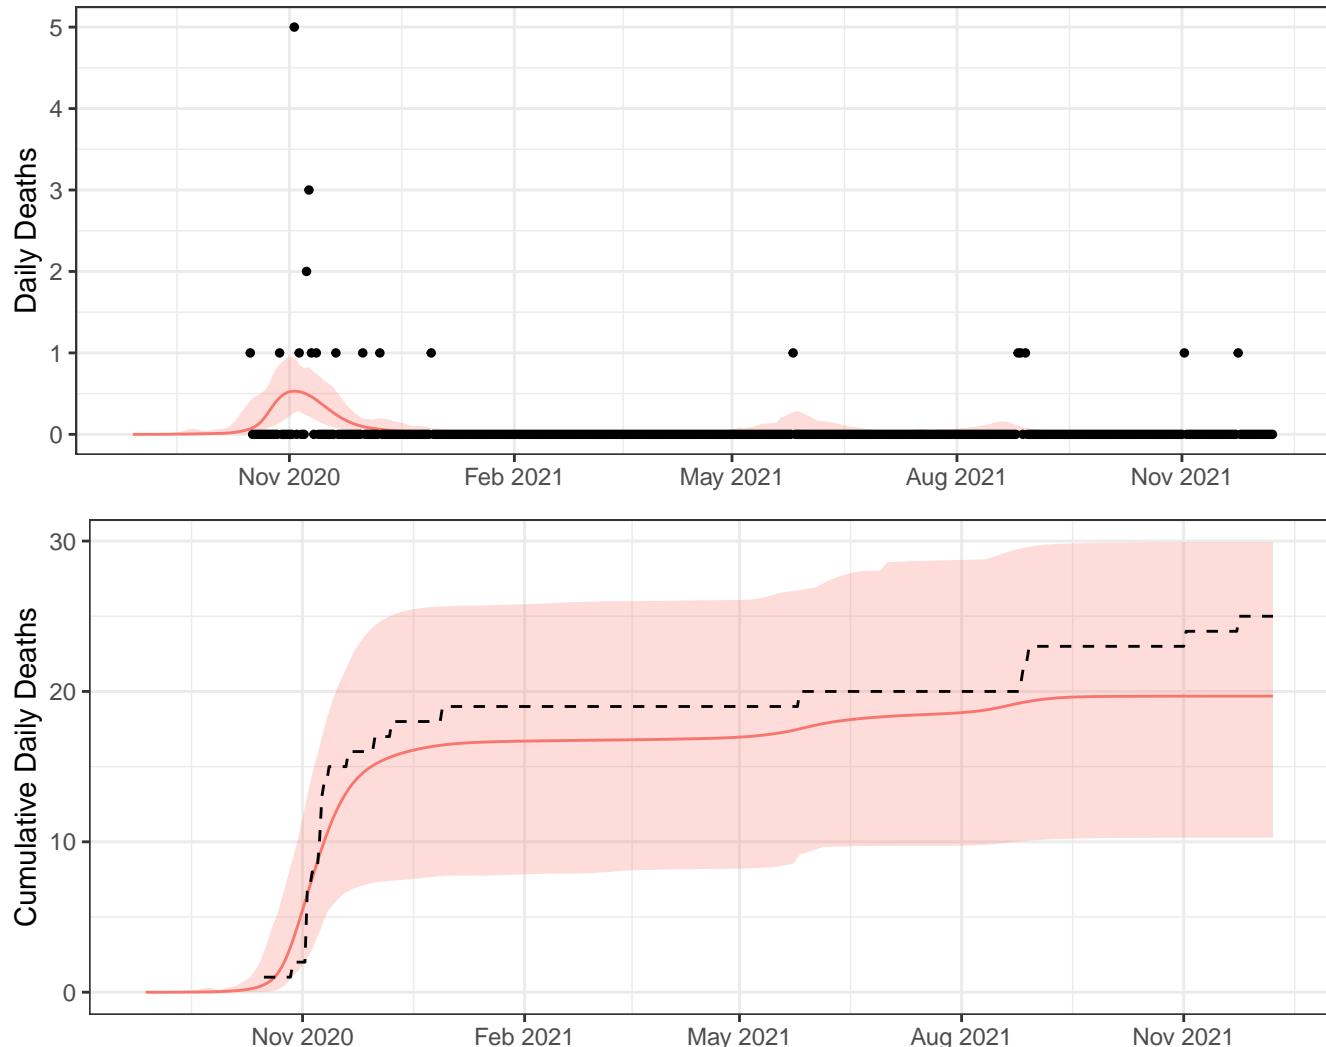

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Iraq

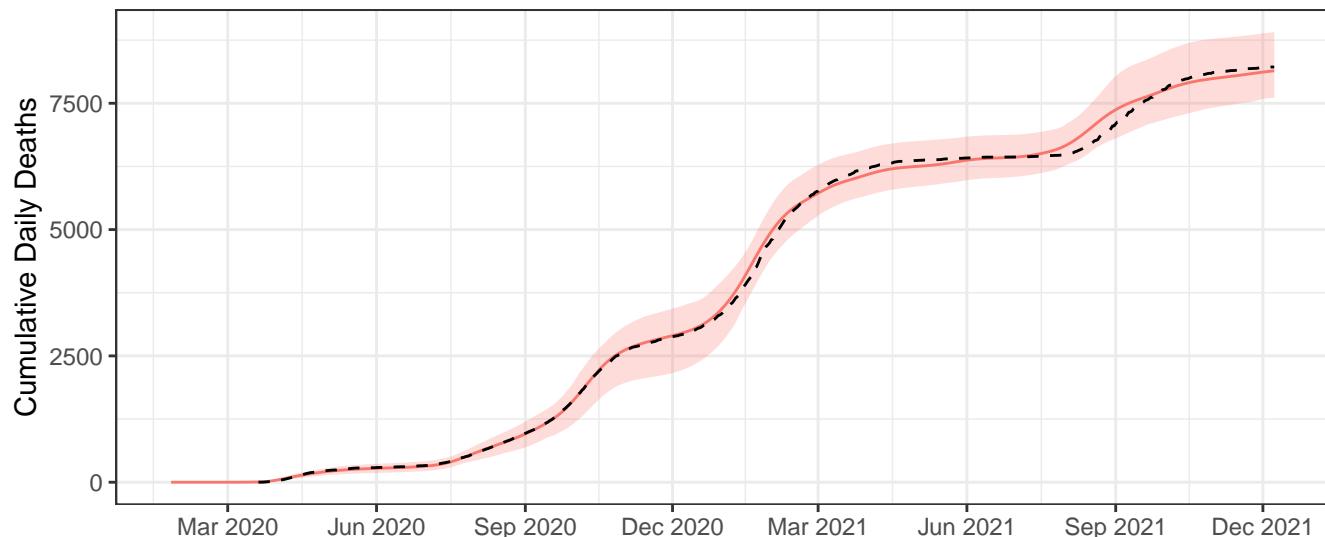

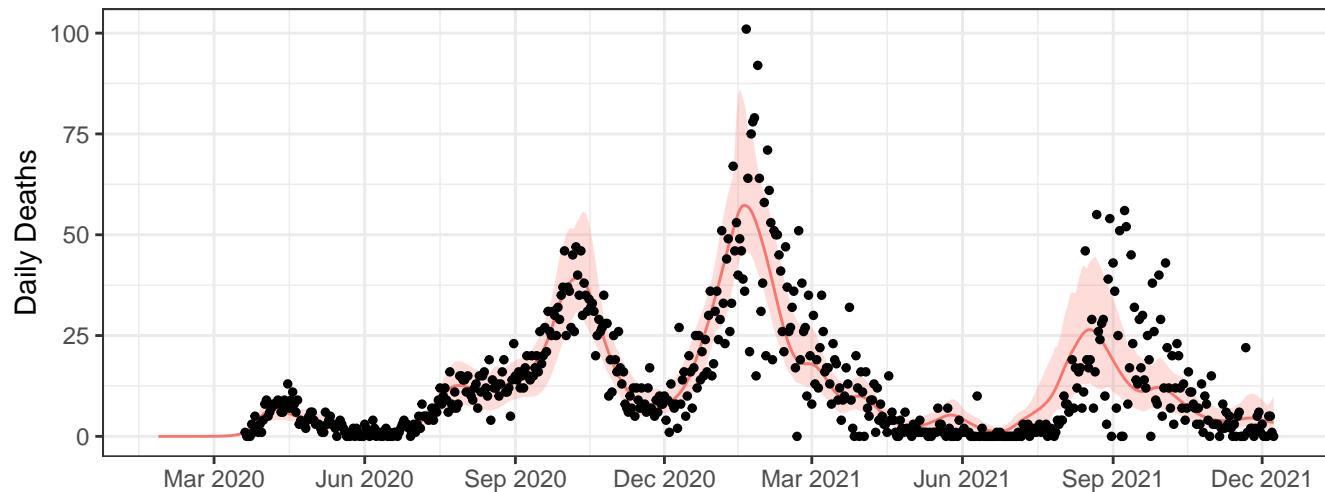

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Iceland

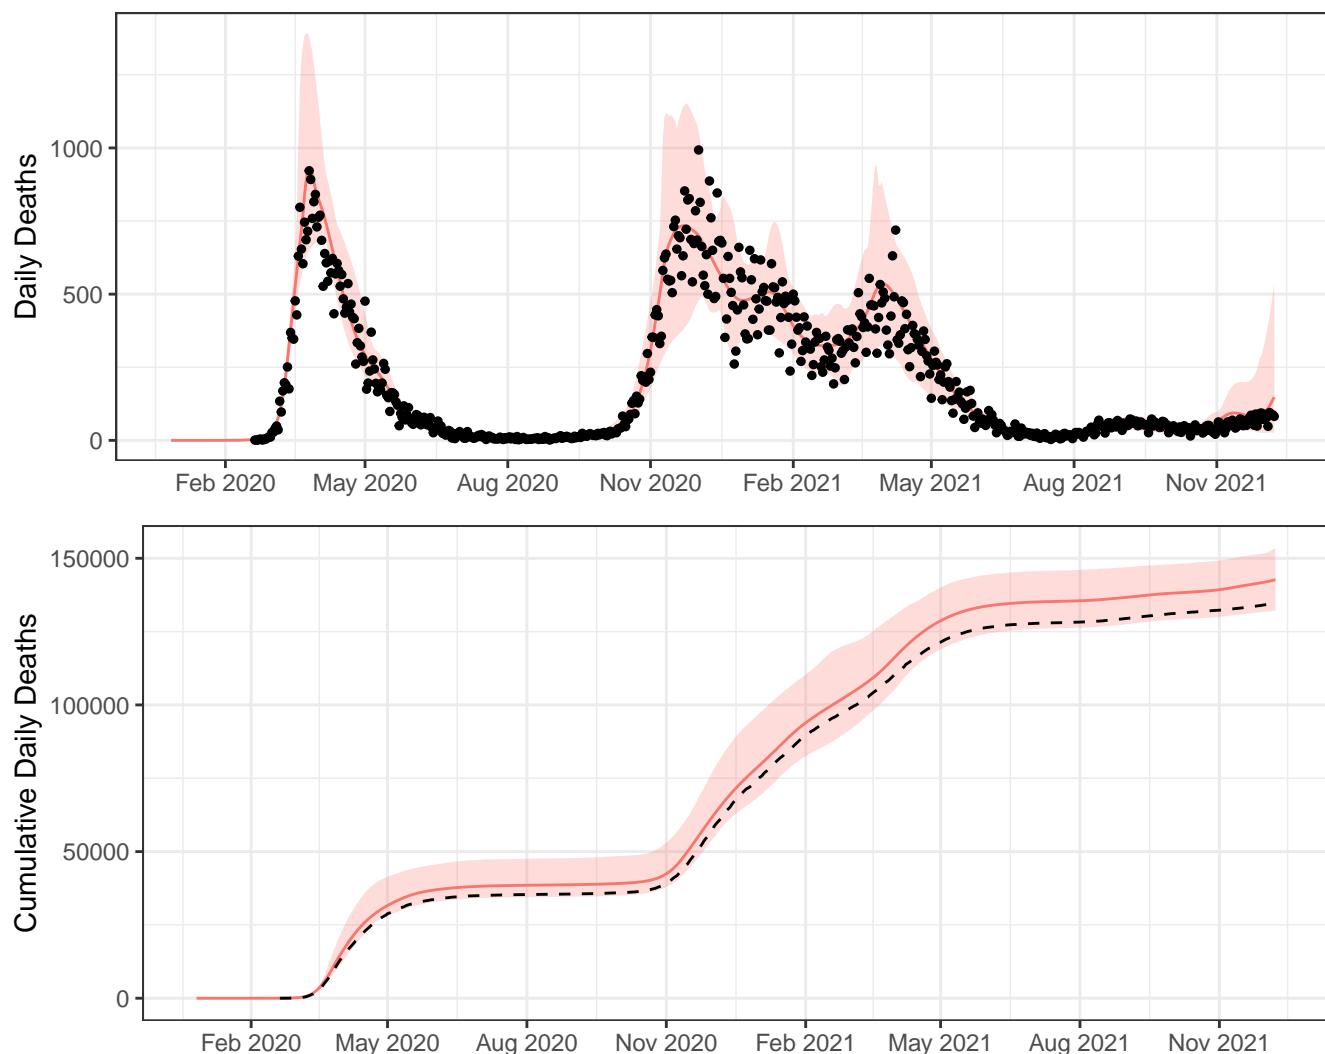

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Israel

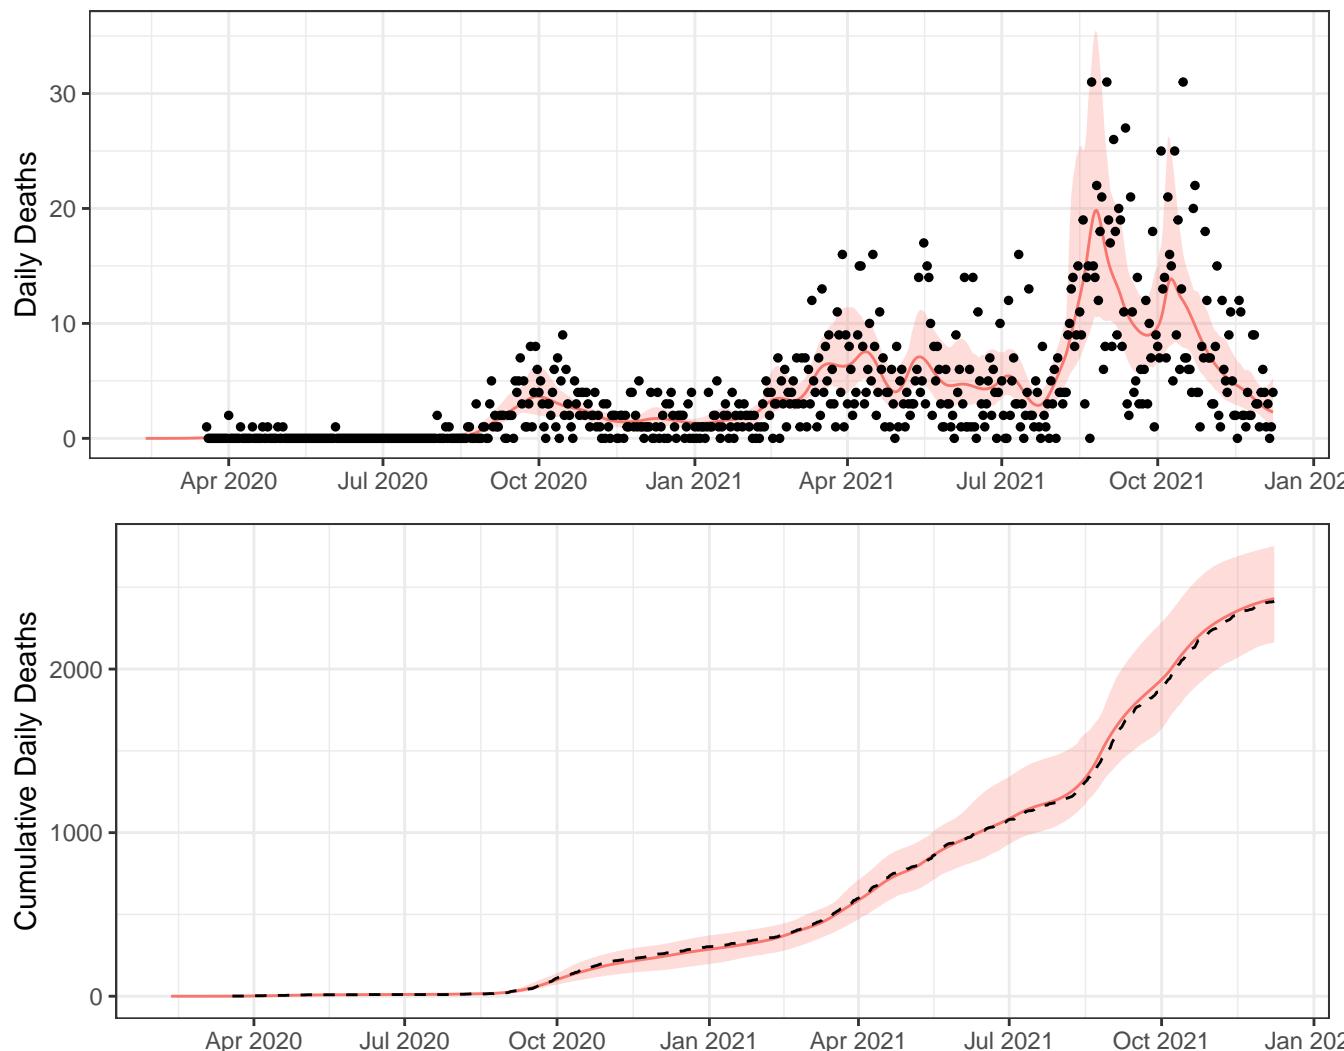

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Italy

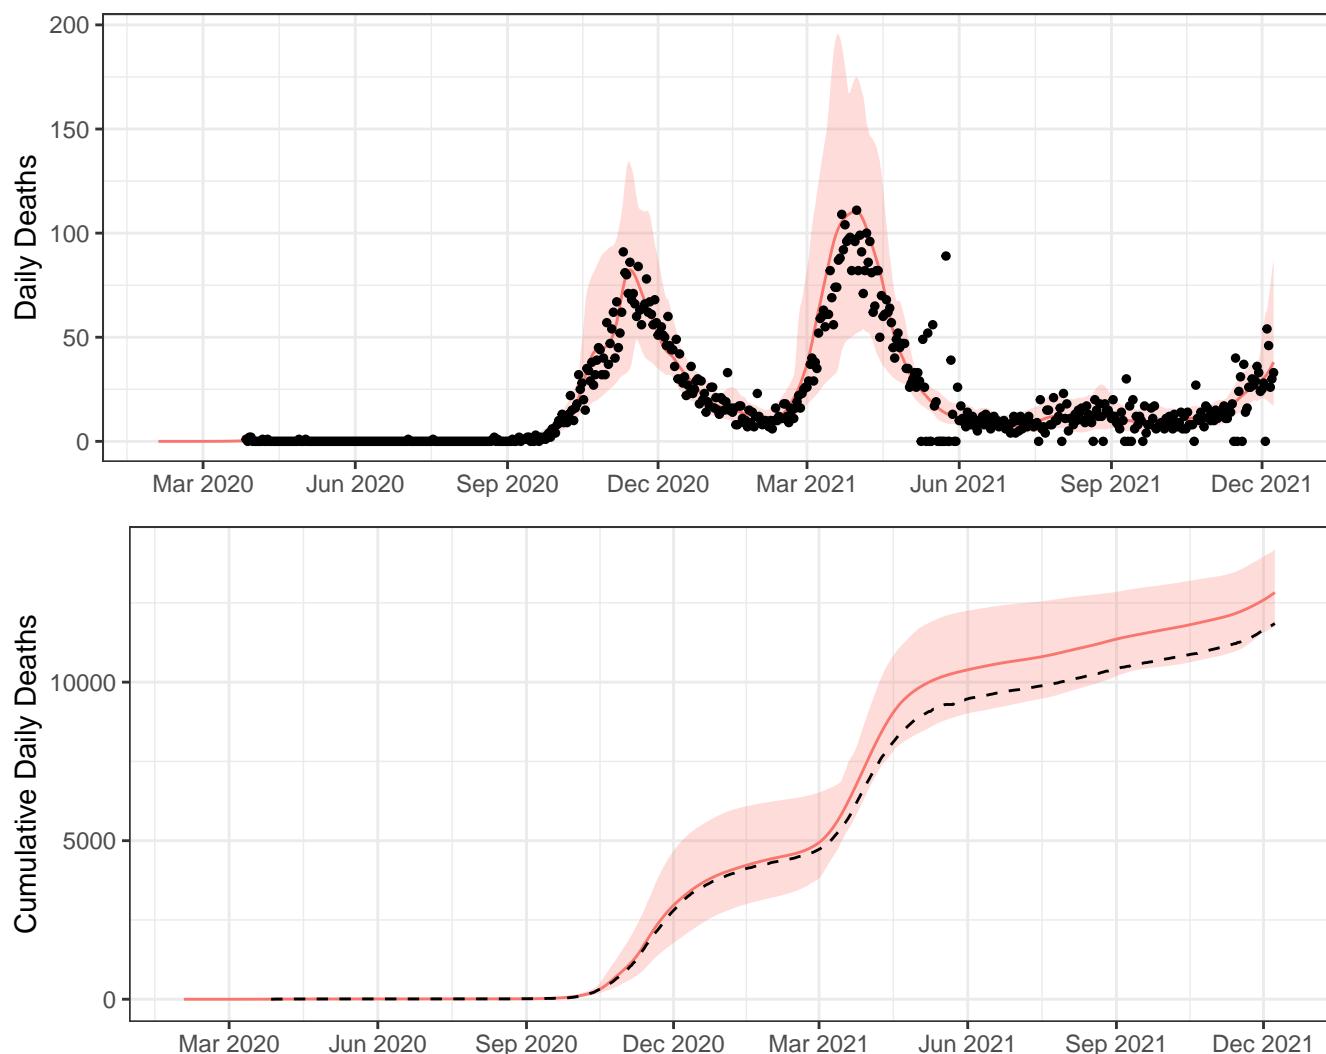

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Jamaica

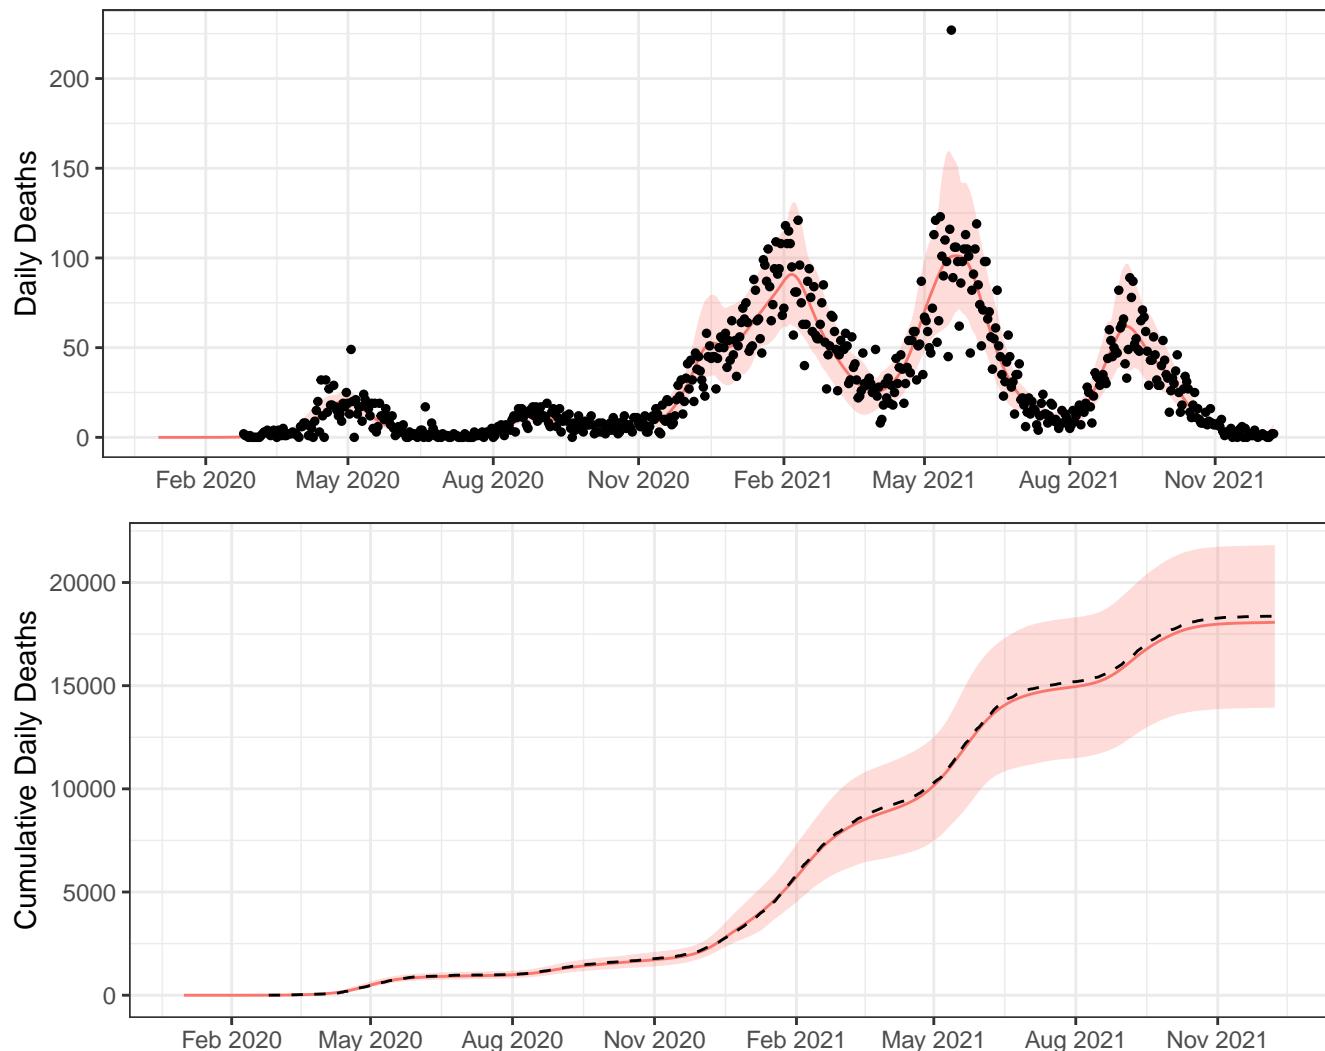

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Jordan

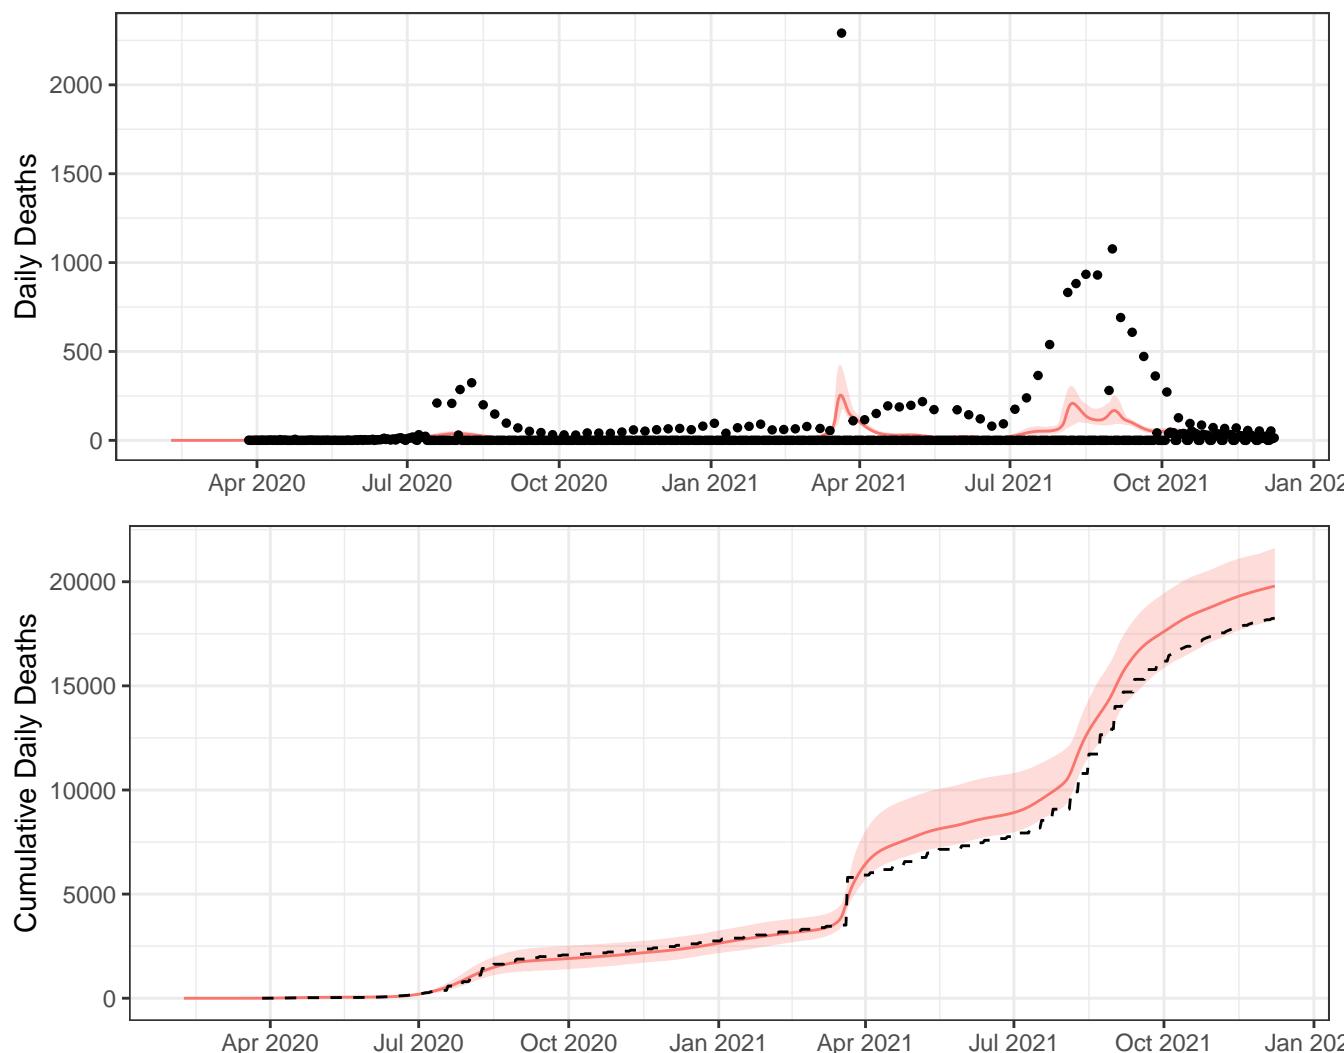

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Japan

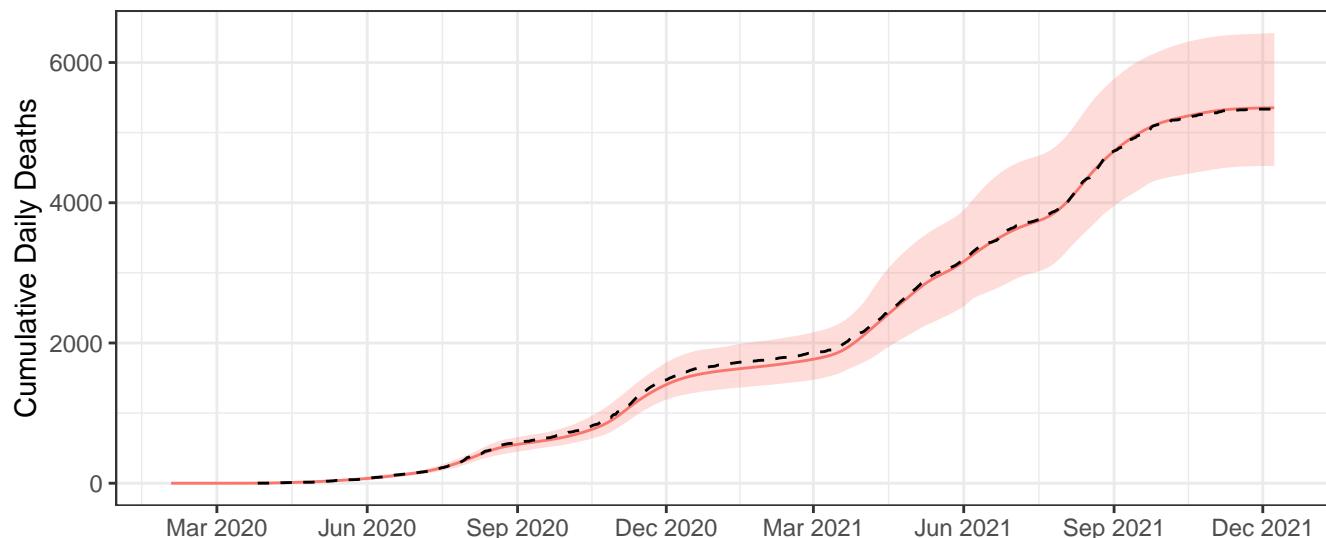

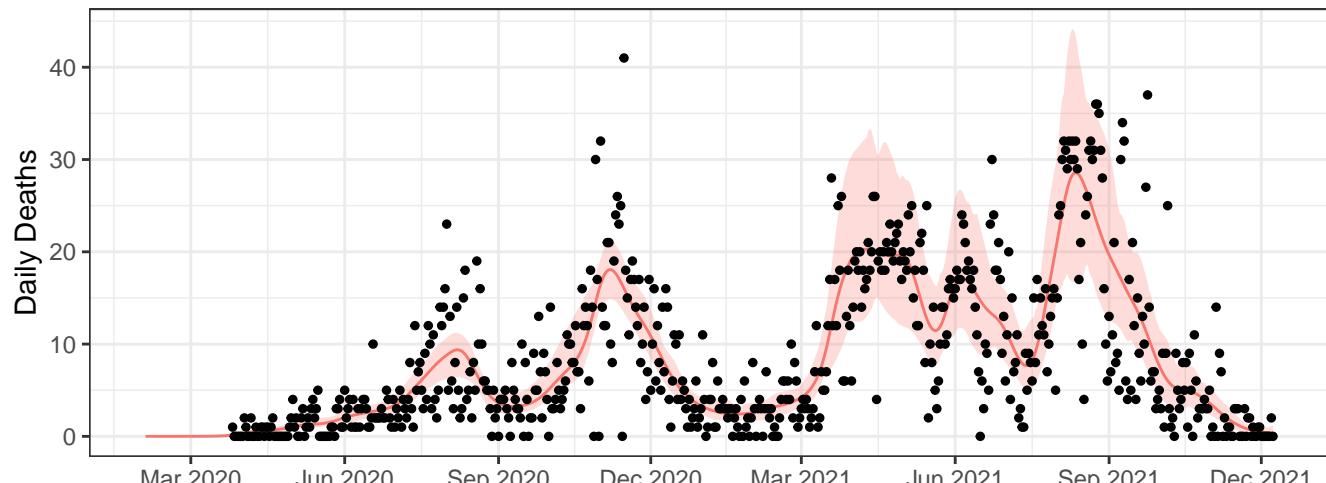

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Kazakhstan

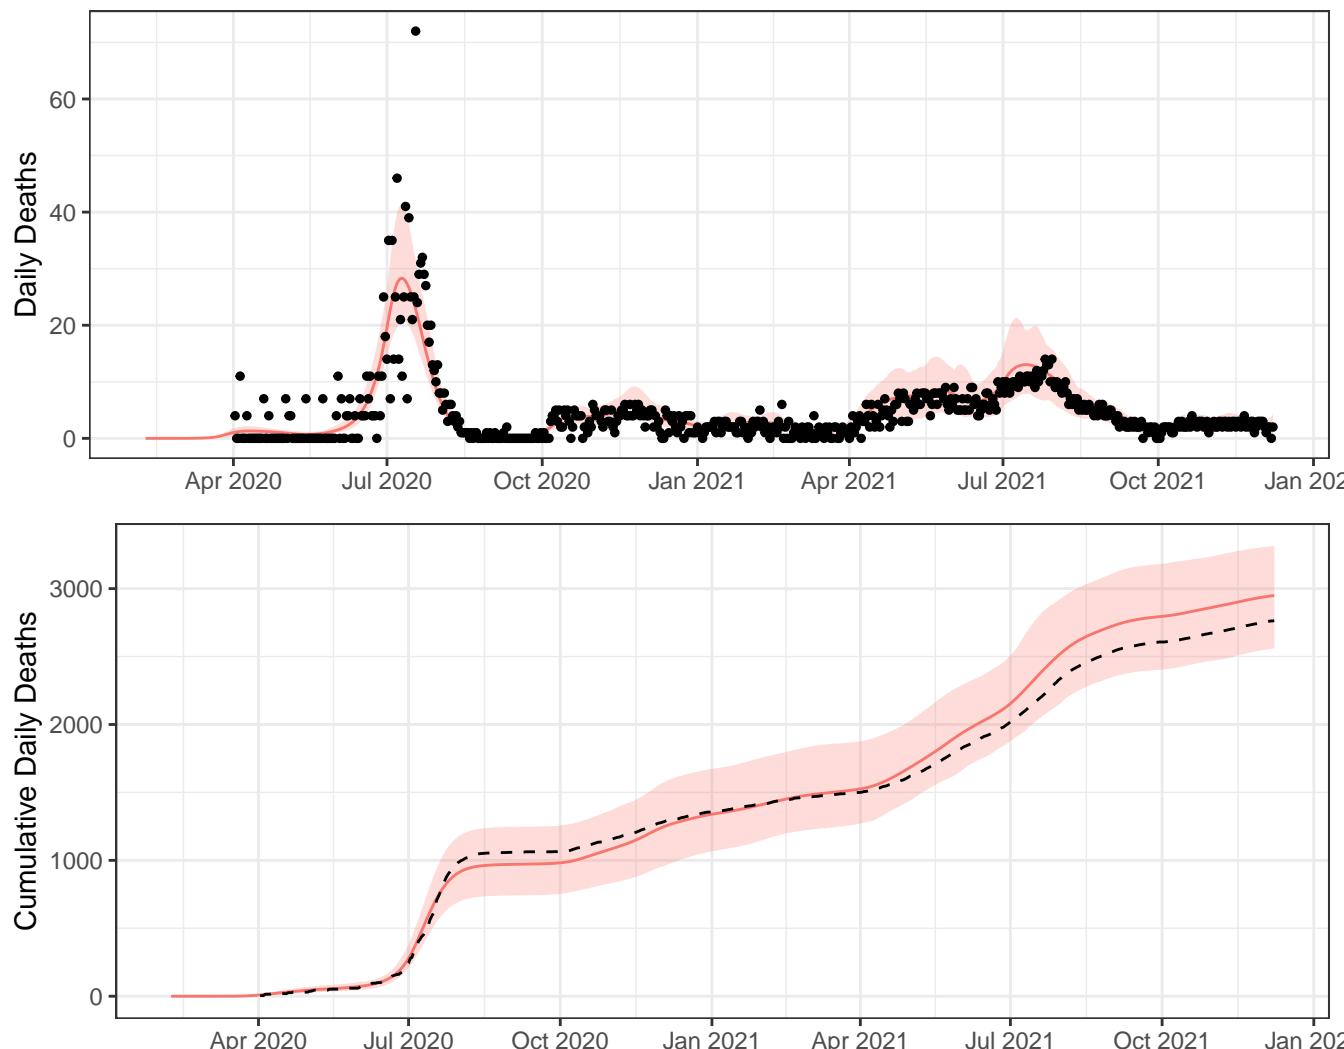

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Kenya

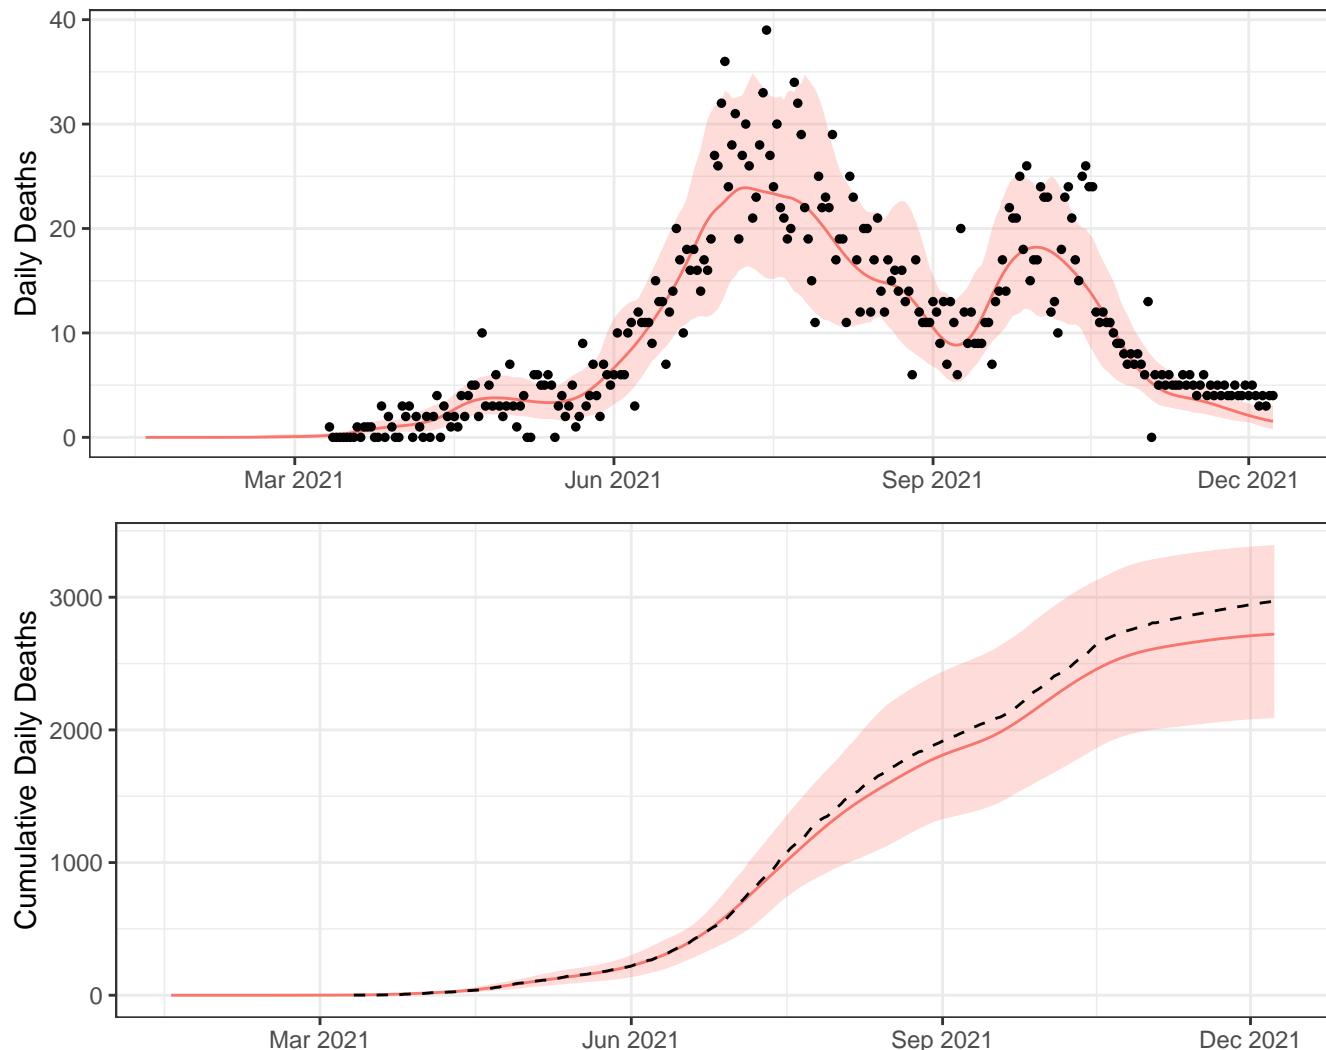

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Kyrgyz Republic

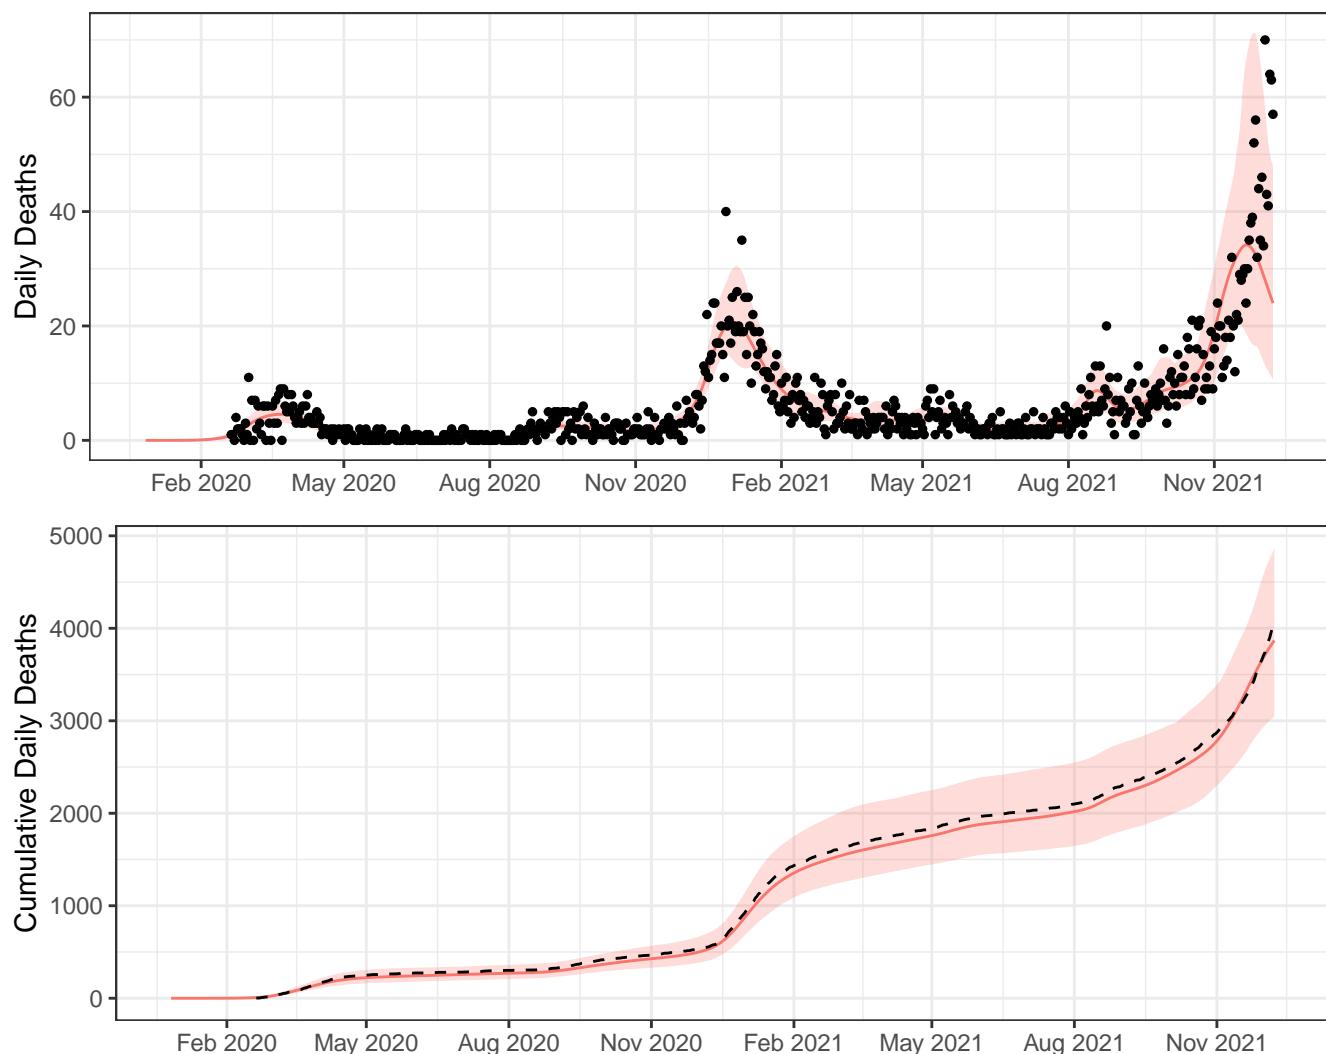

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Cambodia

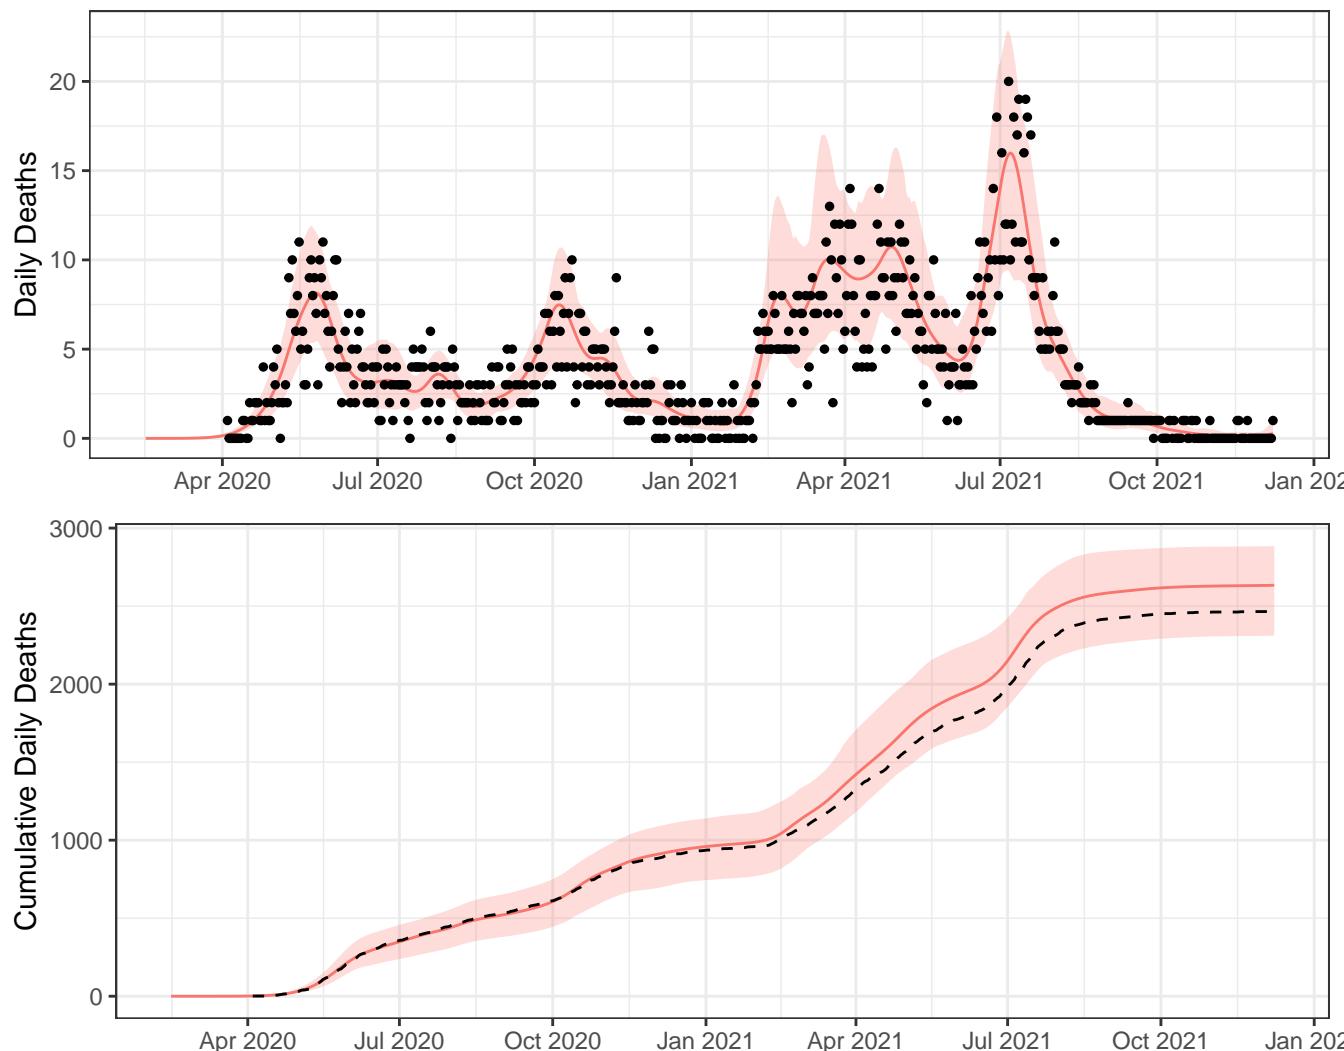

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# South Korea

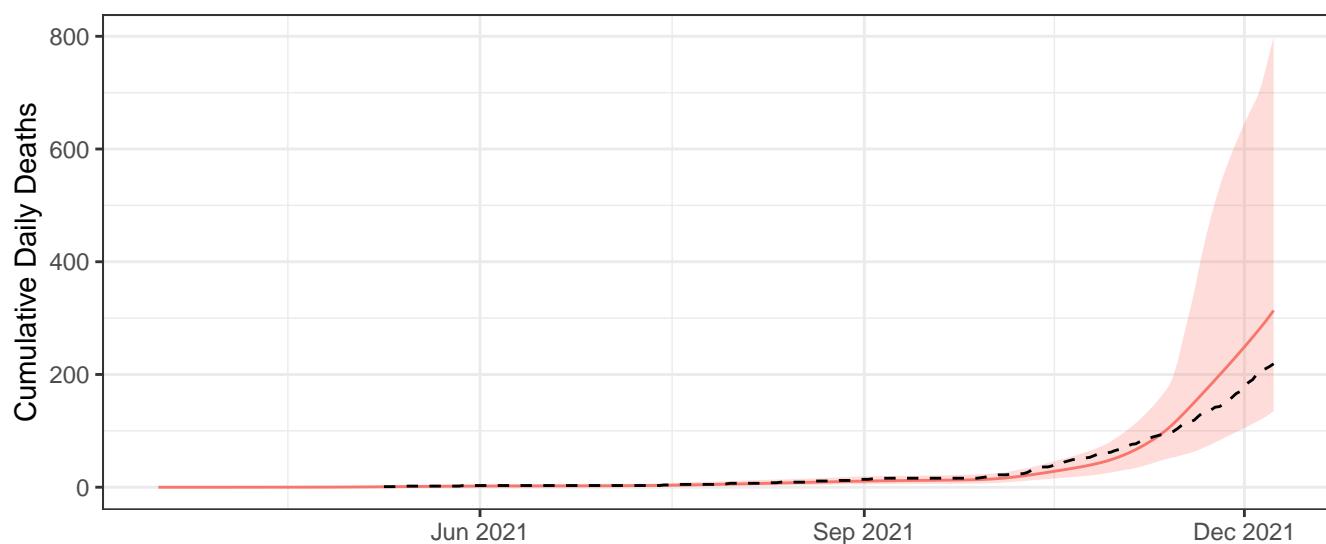

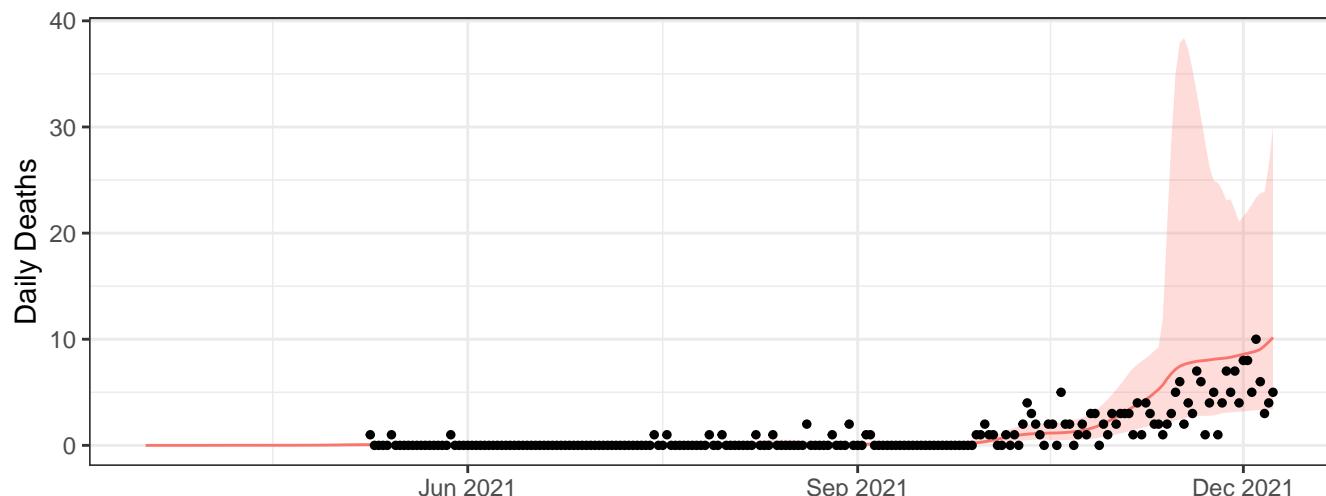

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Kuwait

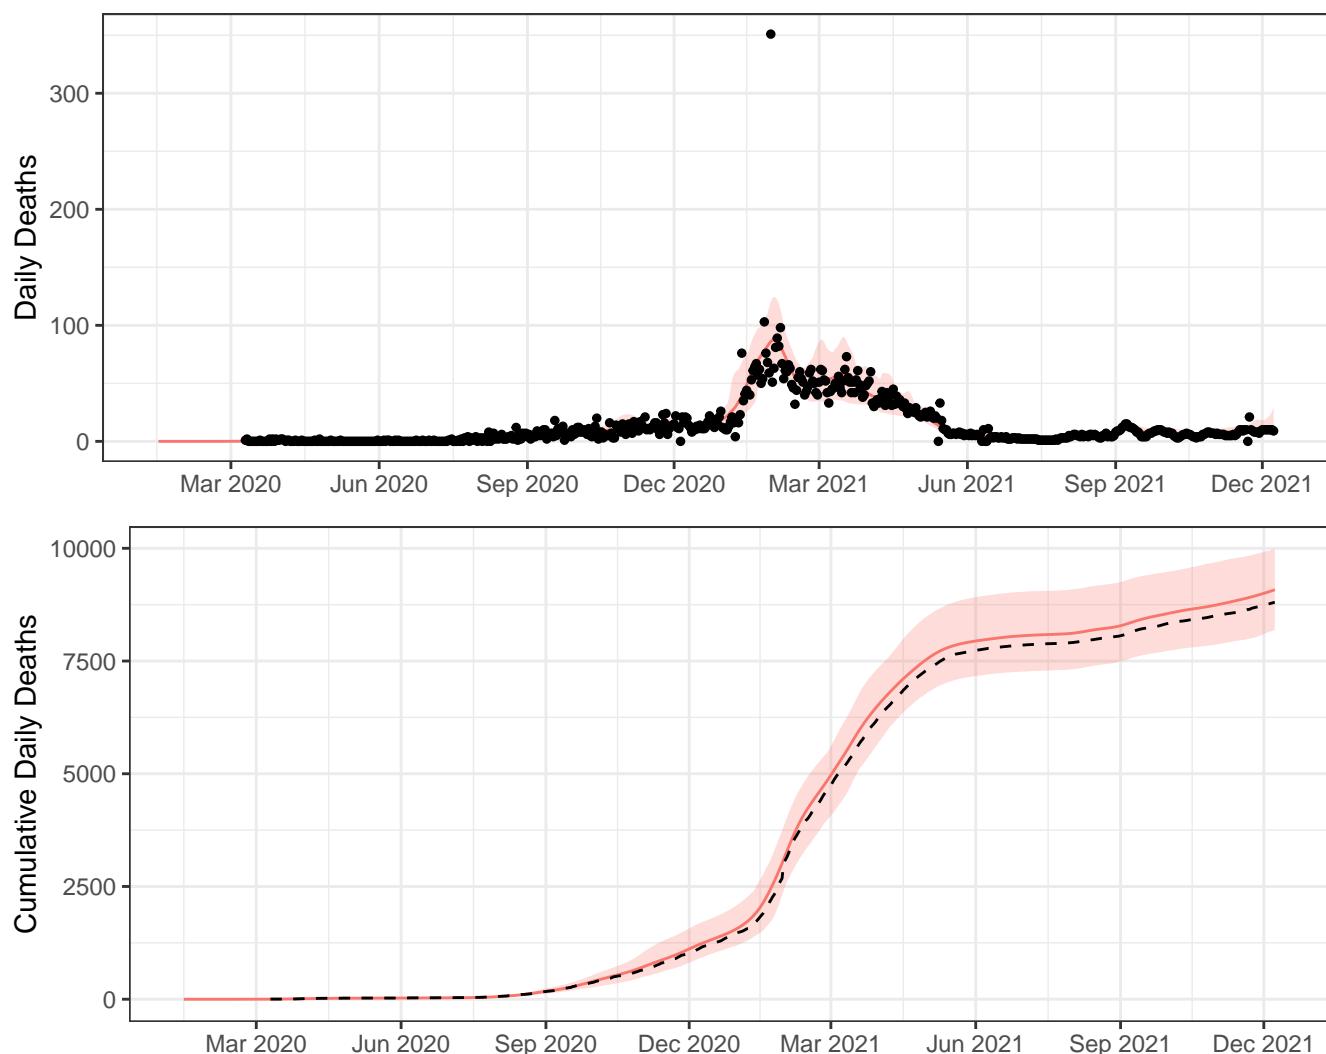

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Lao PDR

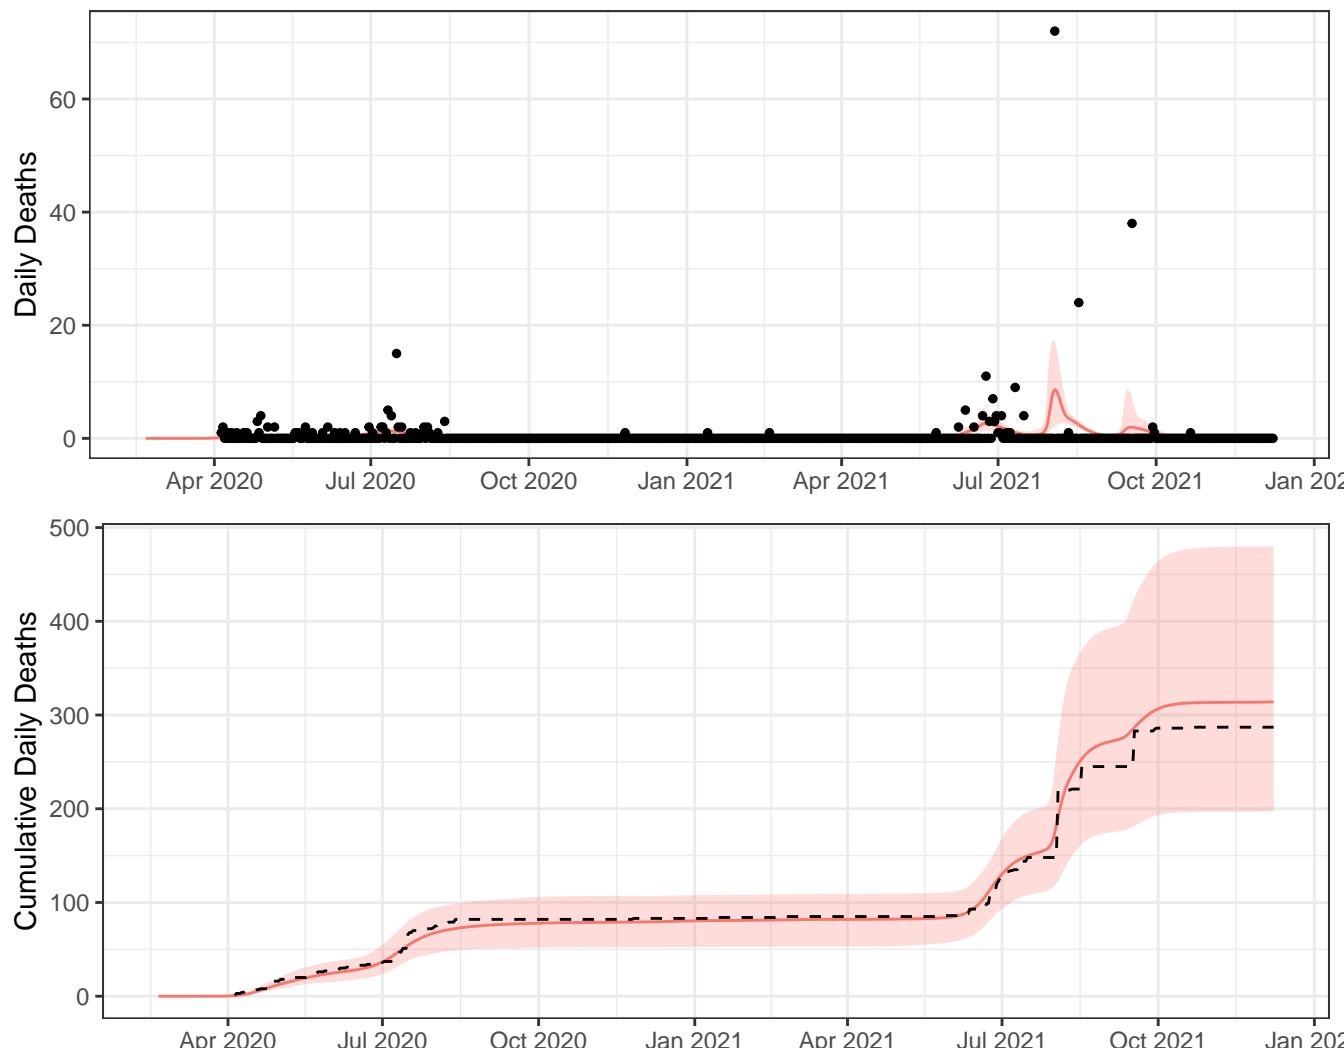

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Lebanon

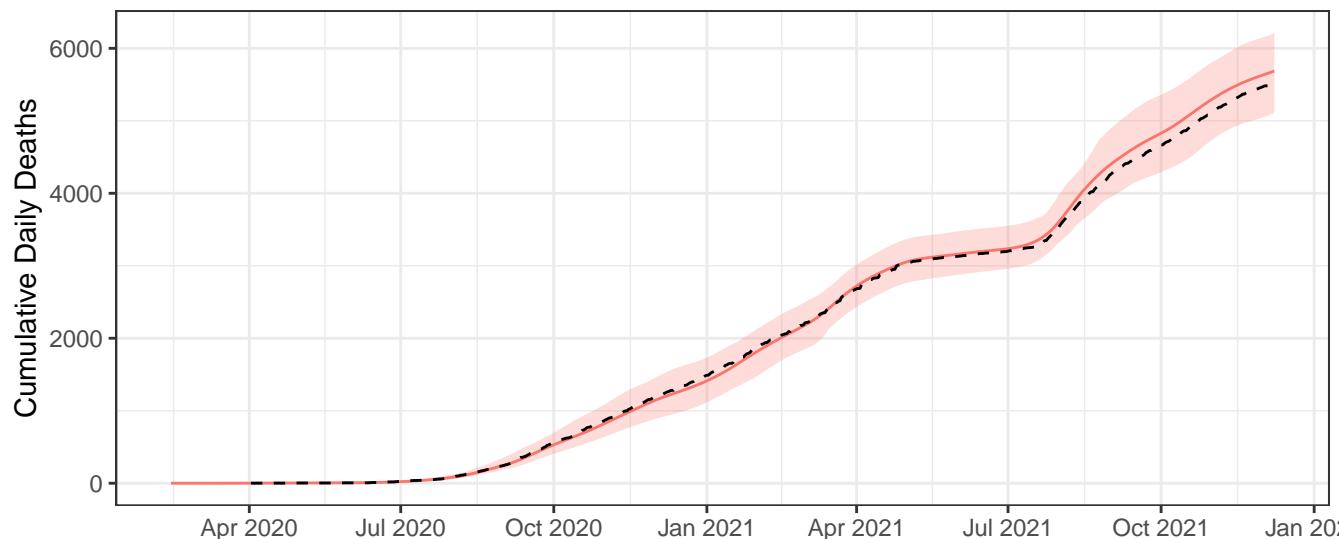

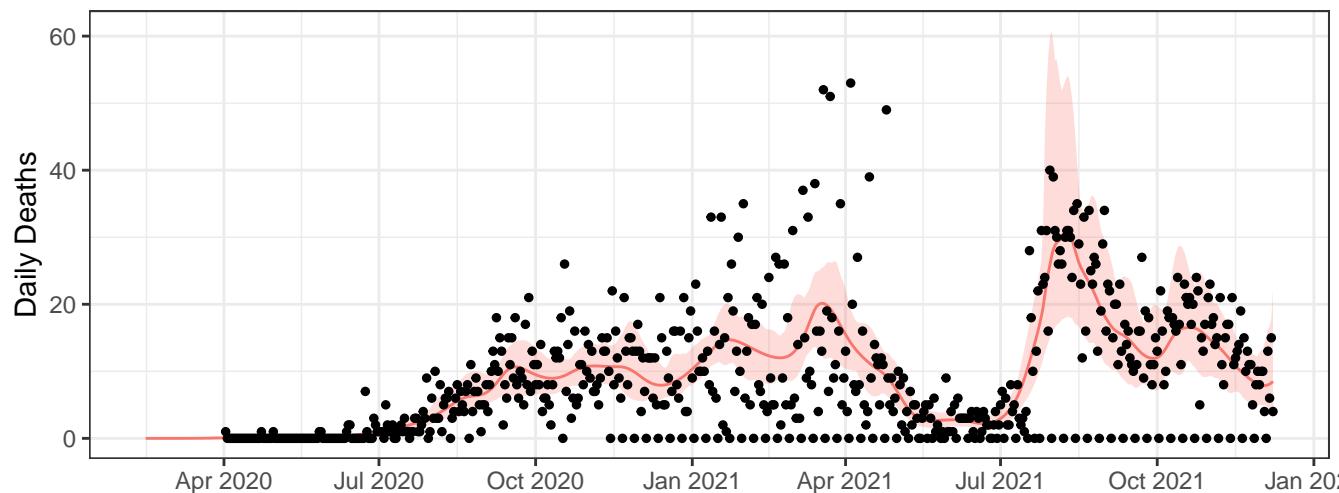

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Liberia

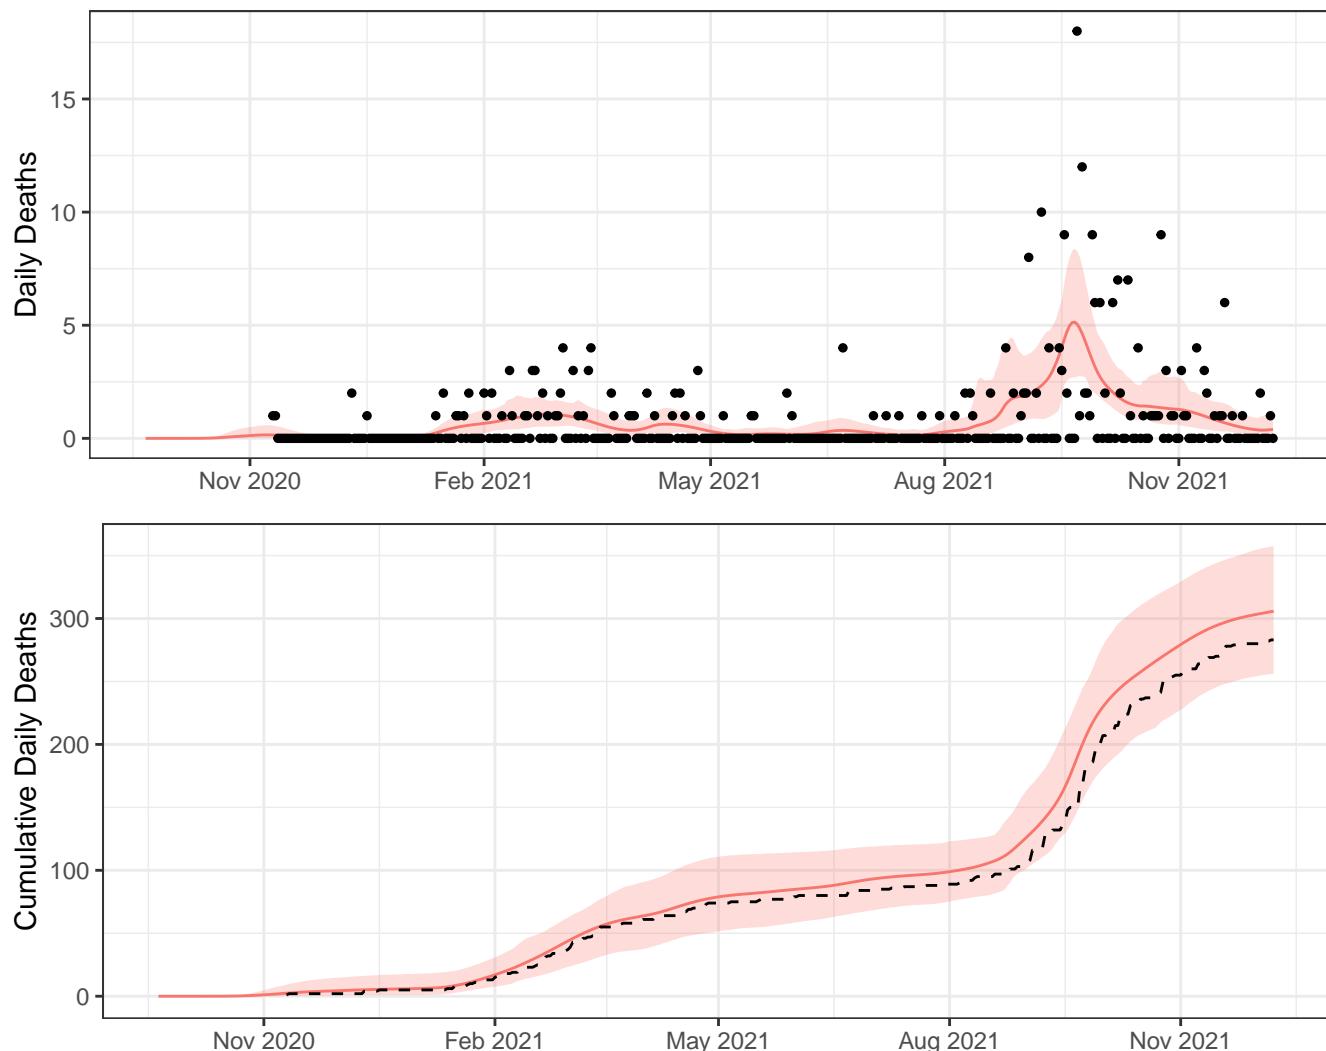

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Libya

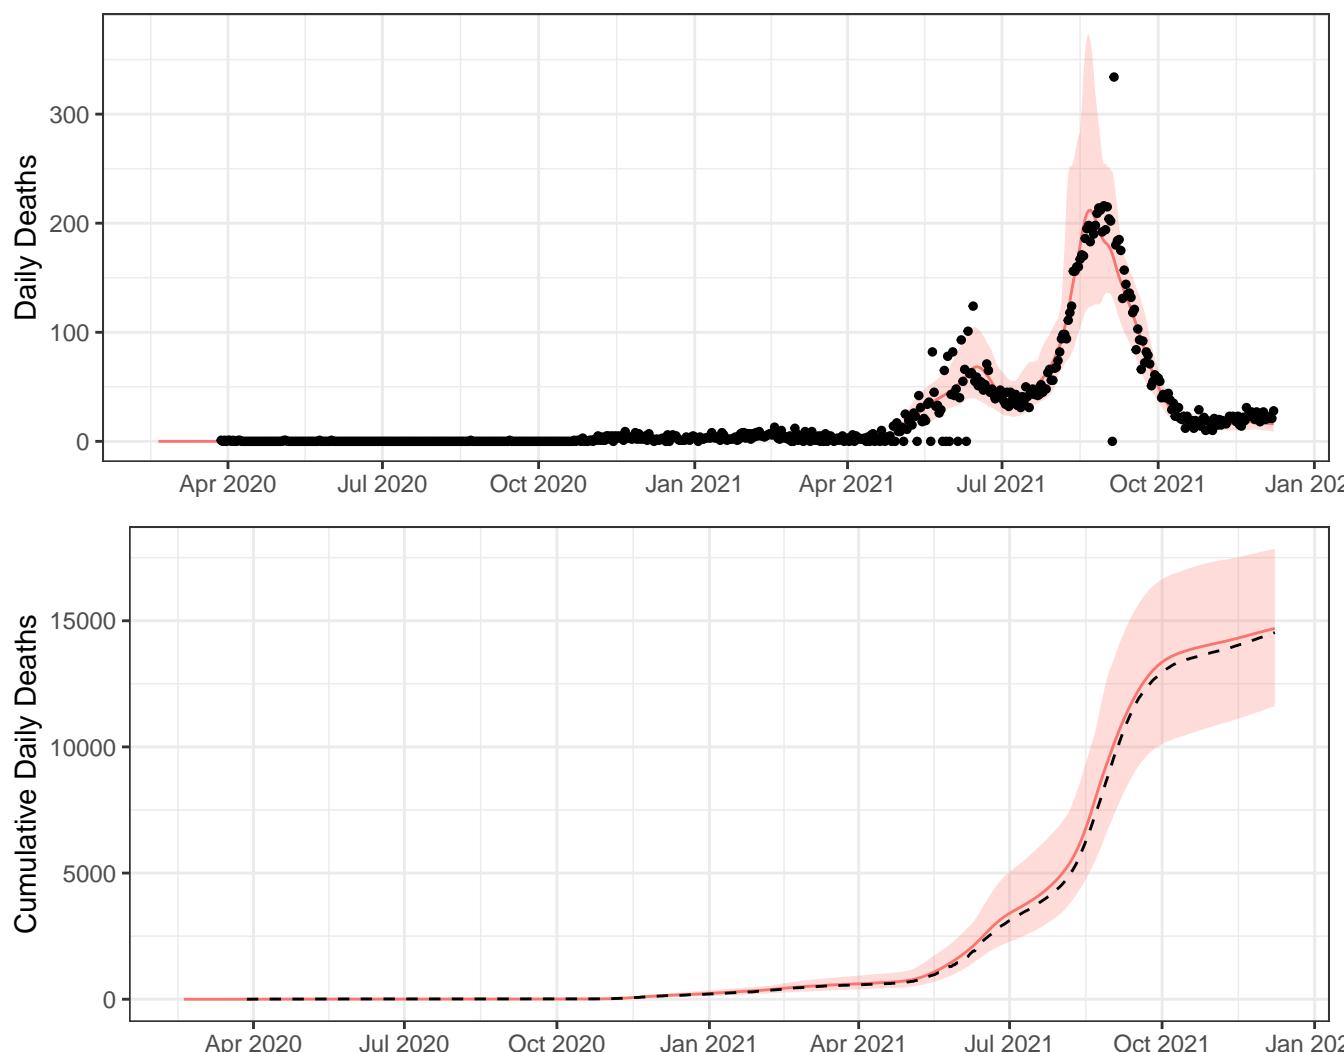

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# St. Lucia

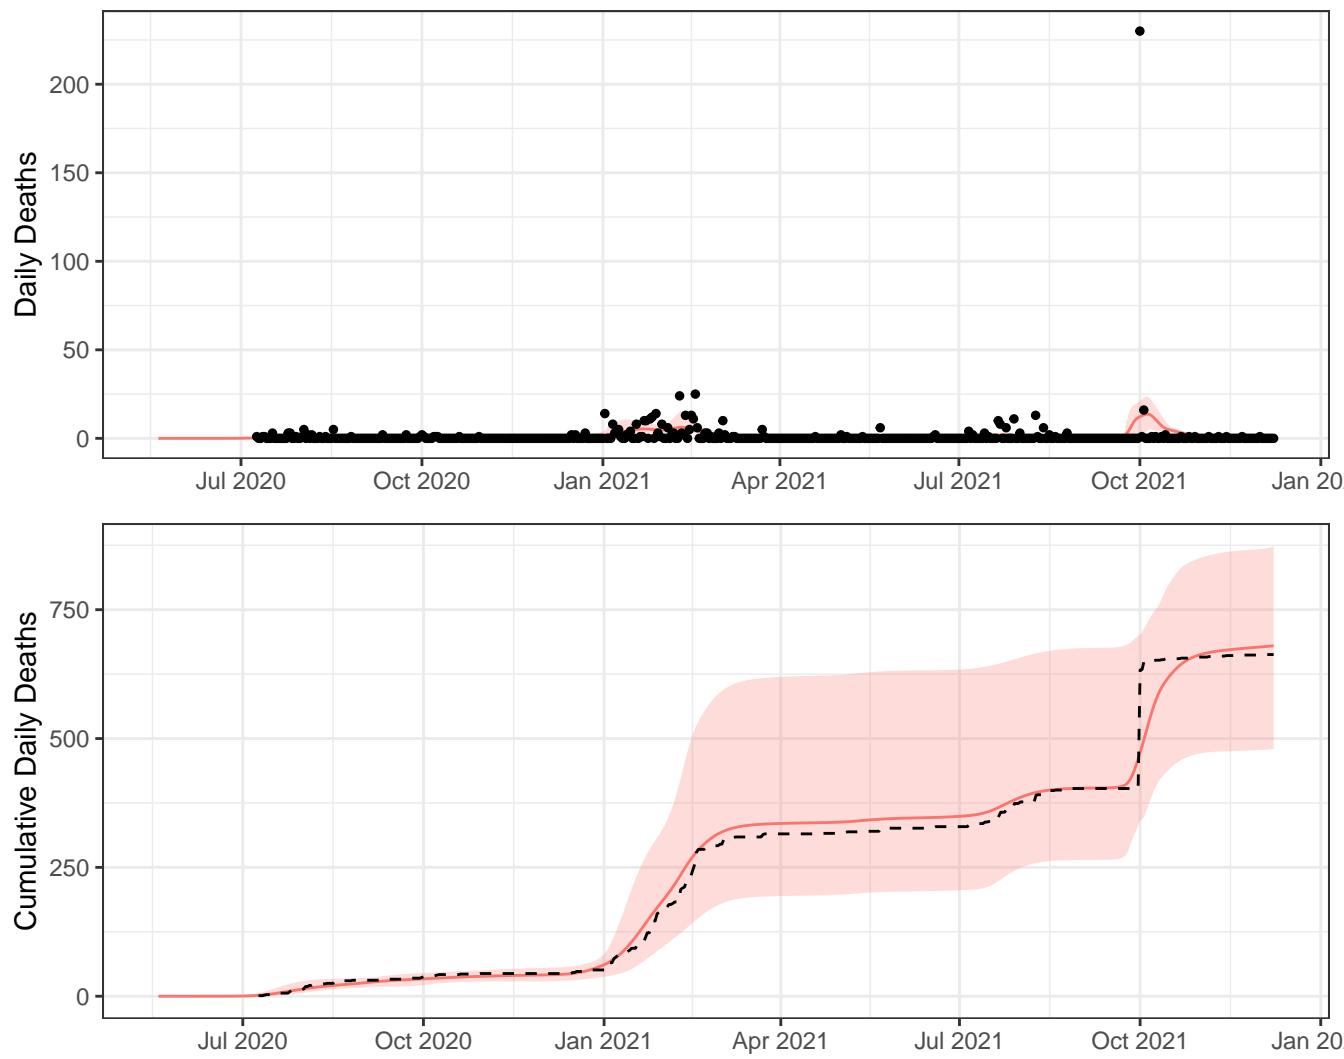

Daily deaths are included with reported COVID–19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Sri Lanka

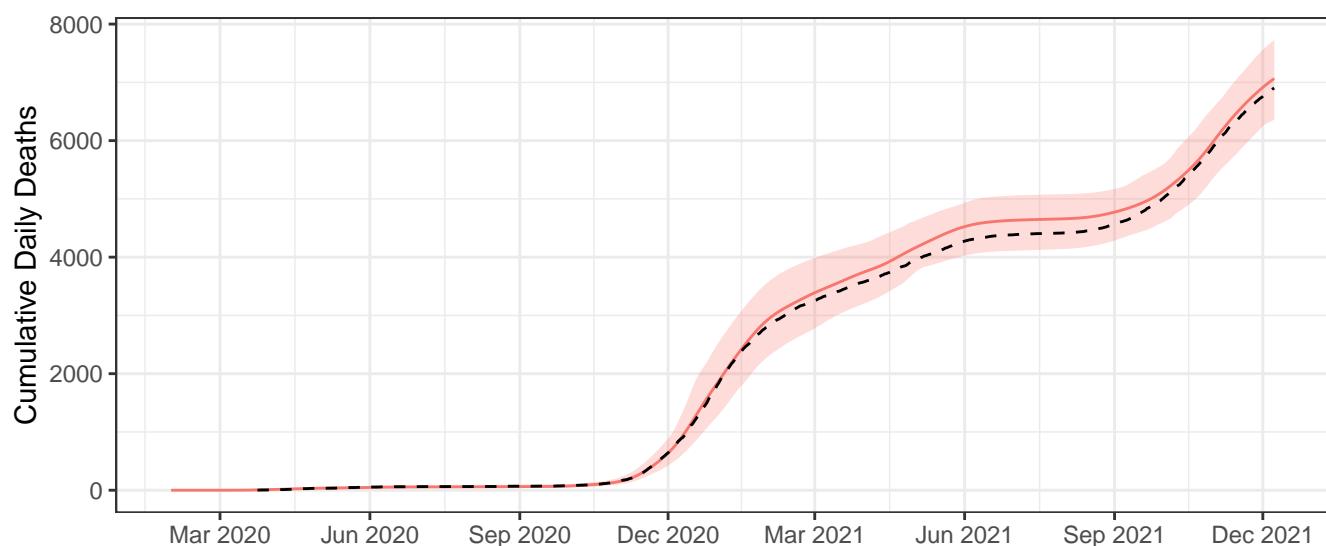

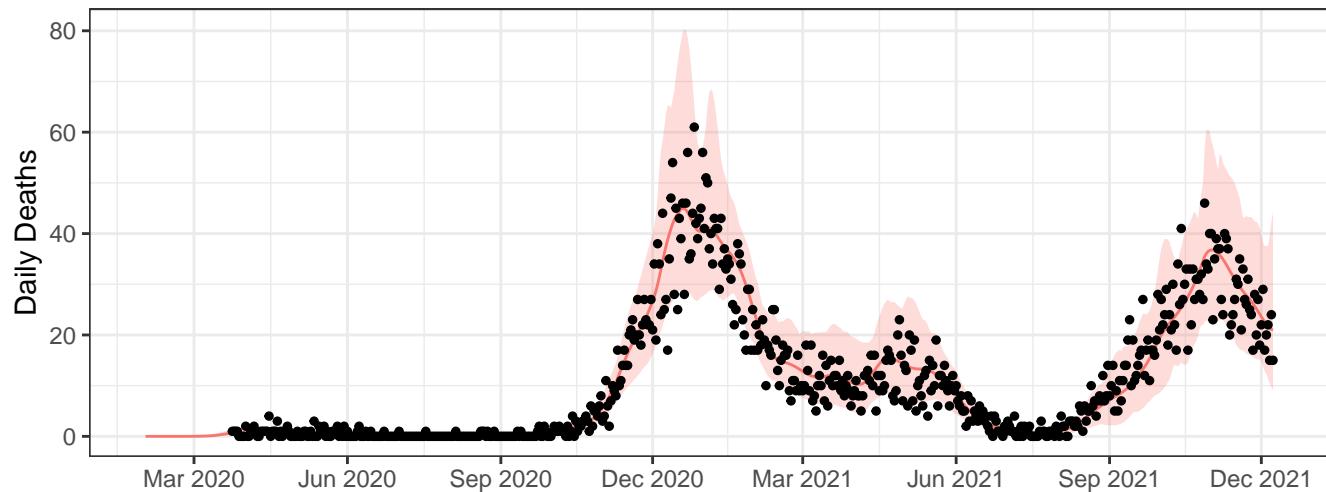

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Lesotho

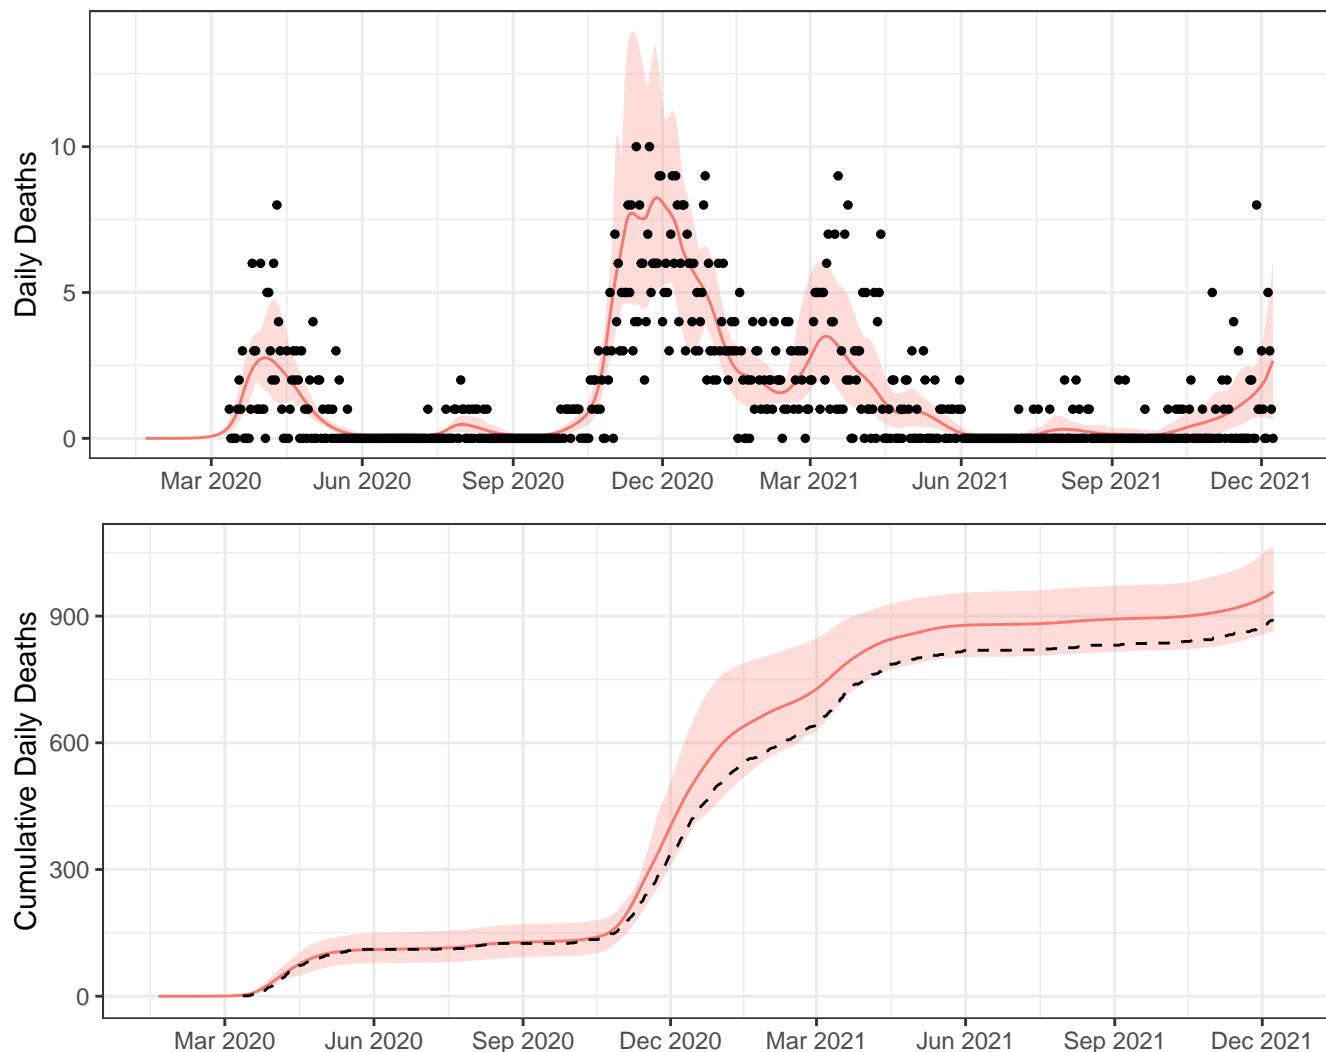

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Lithuania

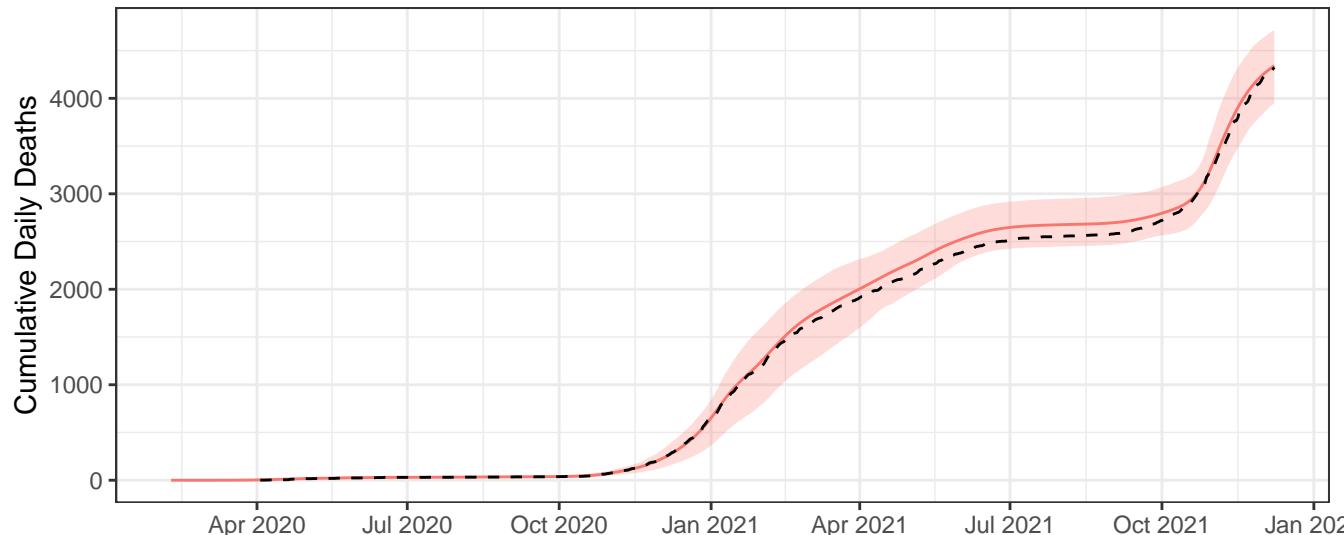

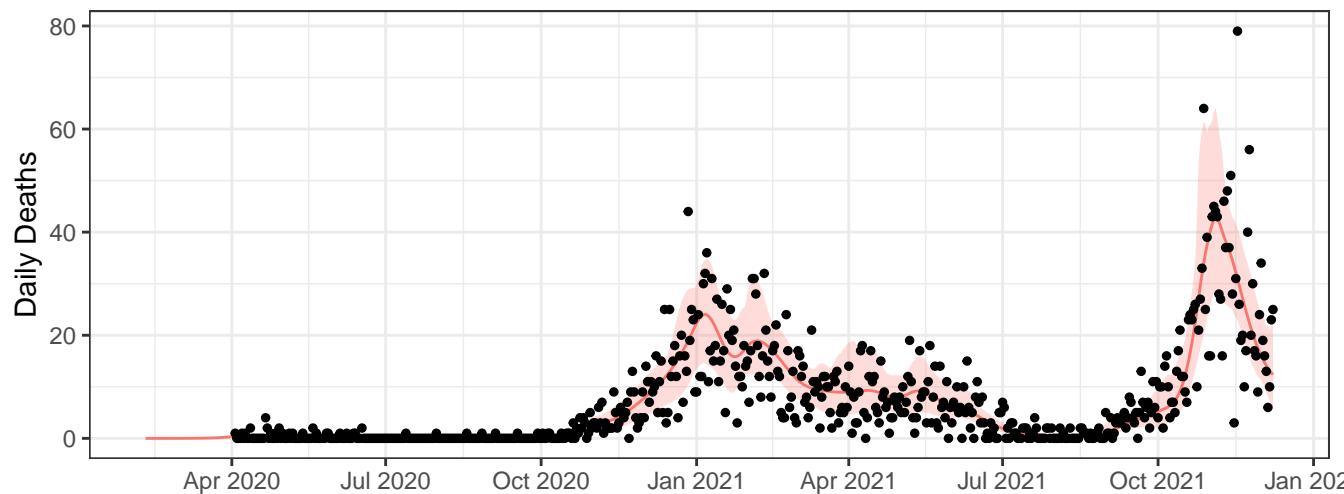

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Luxembourg

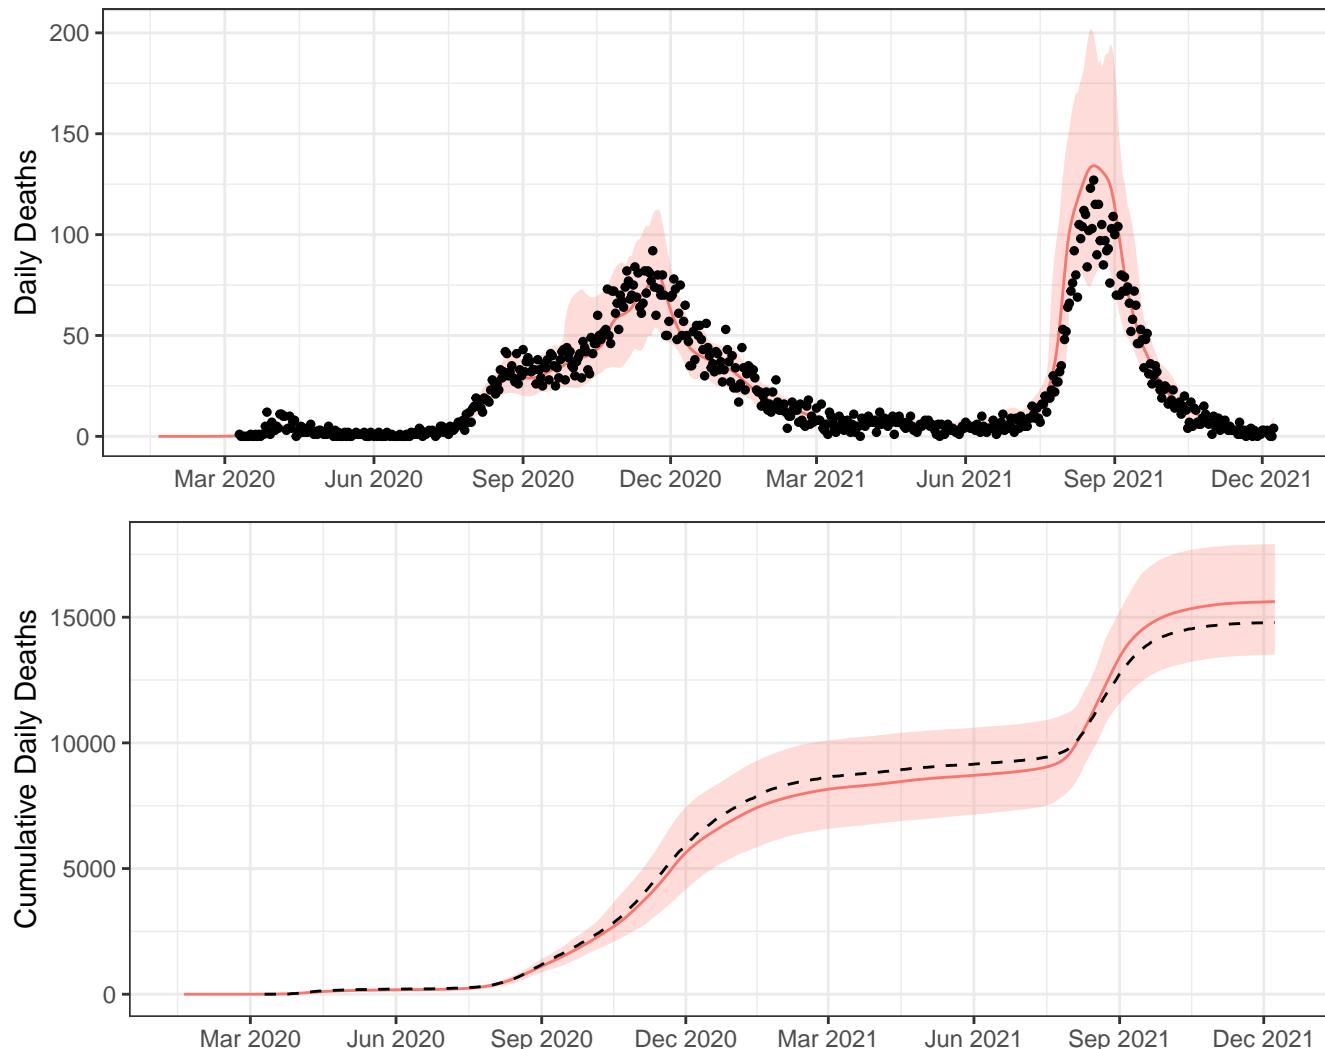

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Latvia

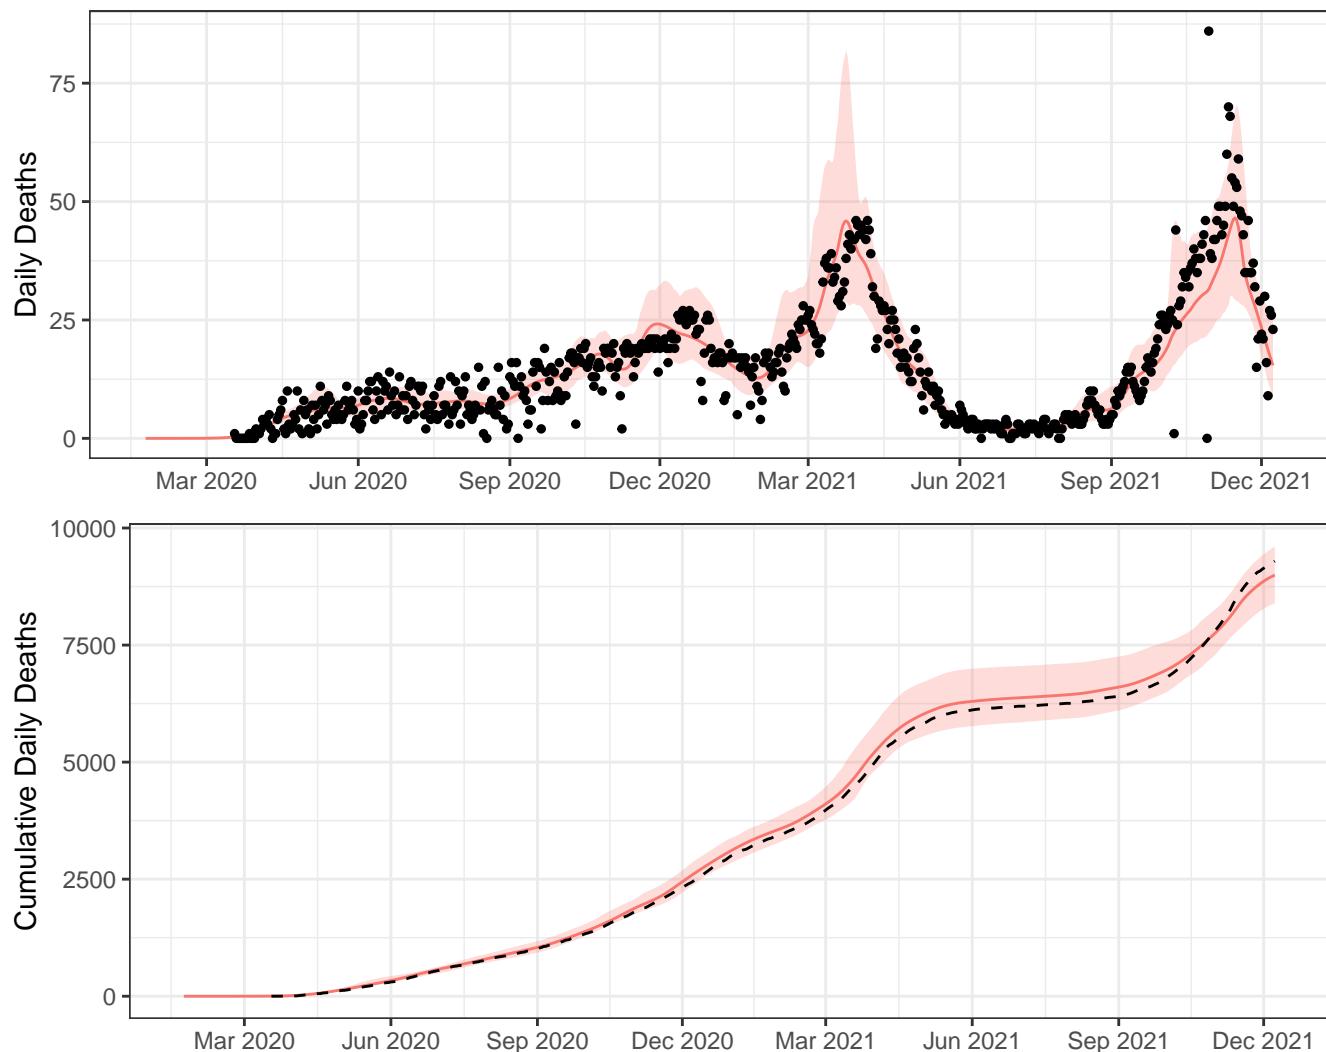

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Morocco

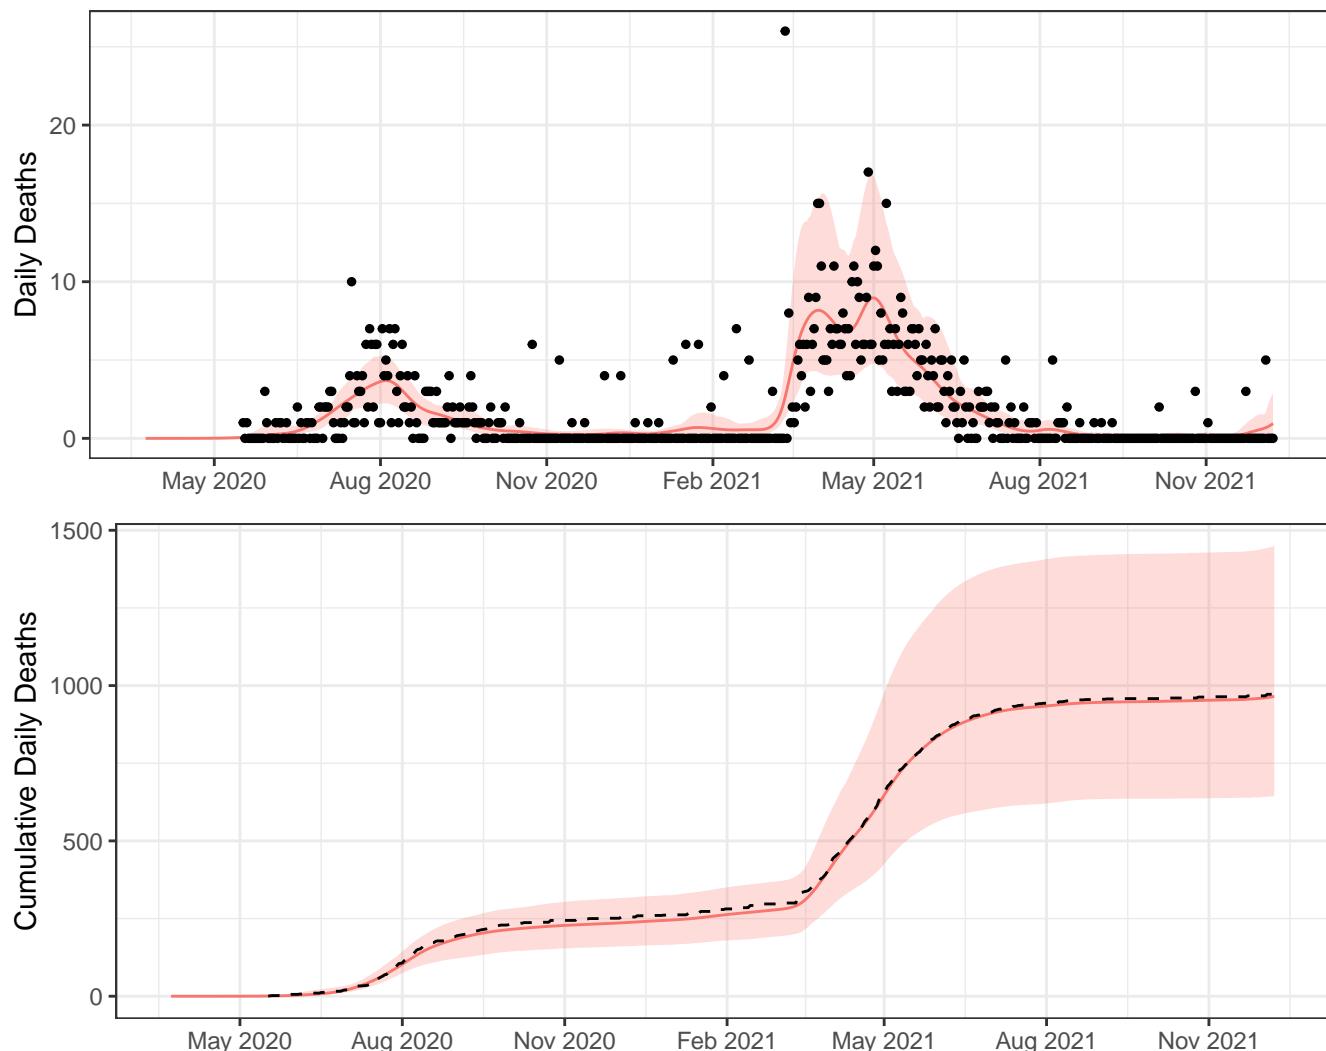

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Moldova

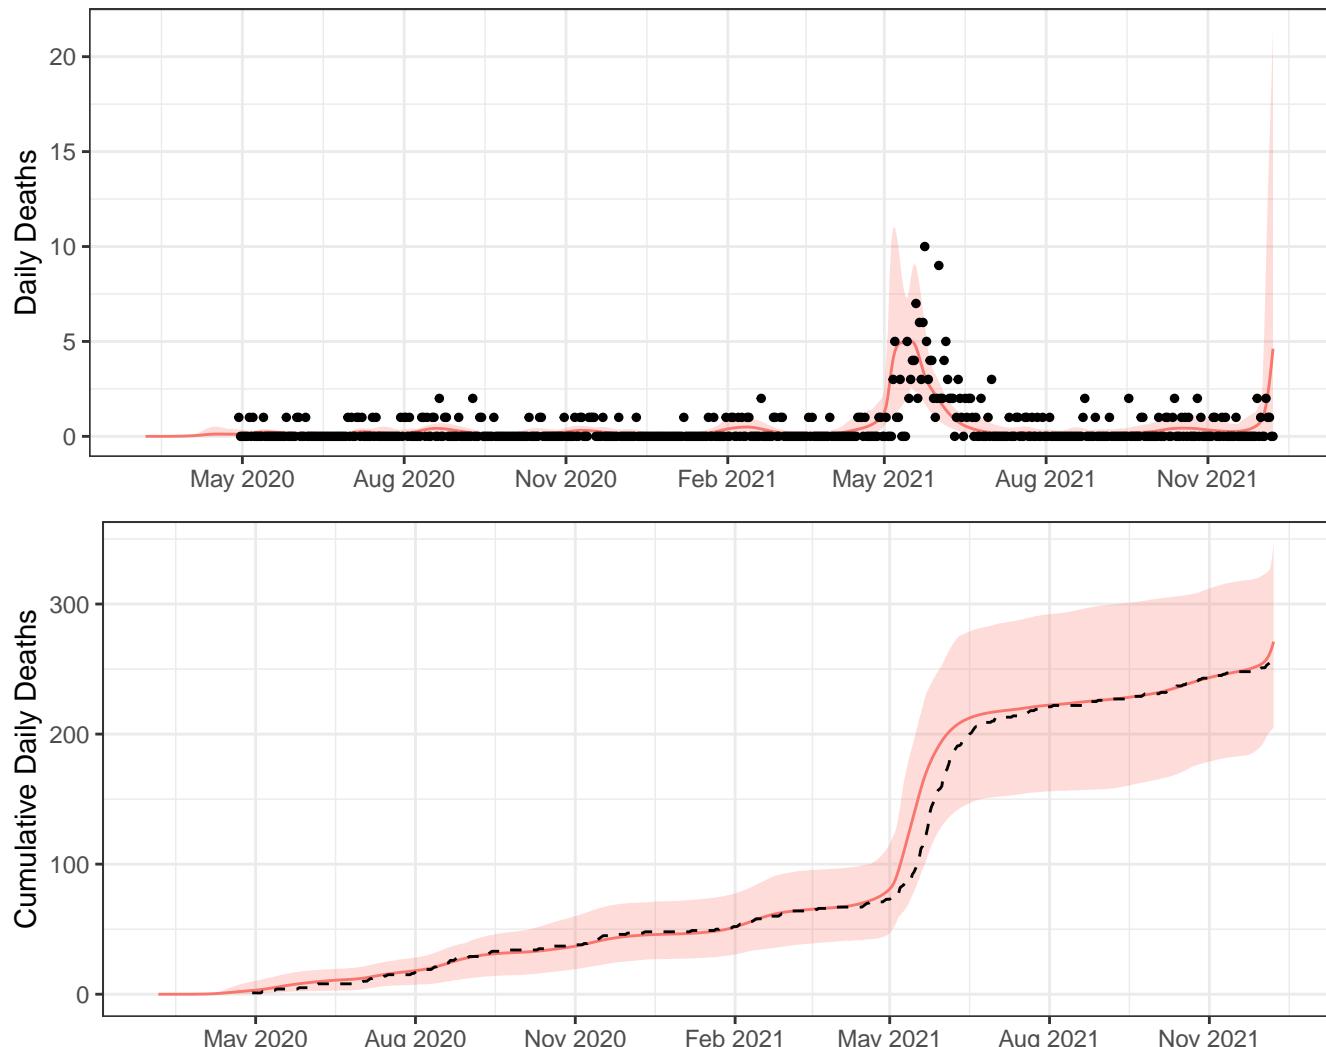

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Madagascar

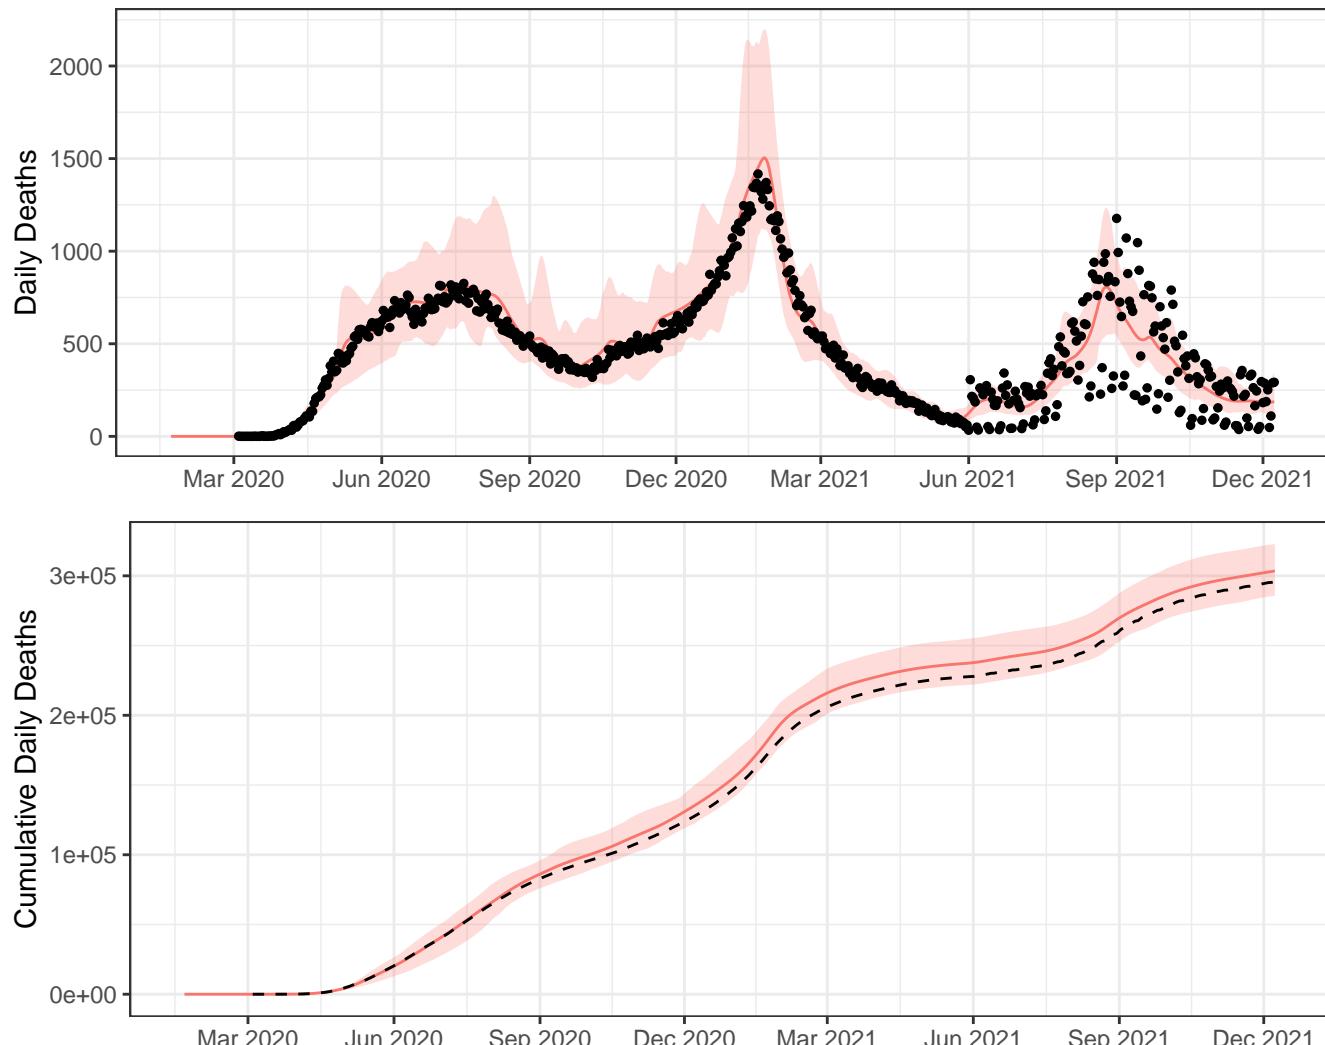

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Maldives

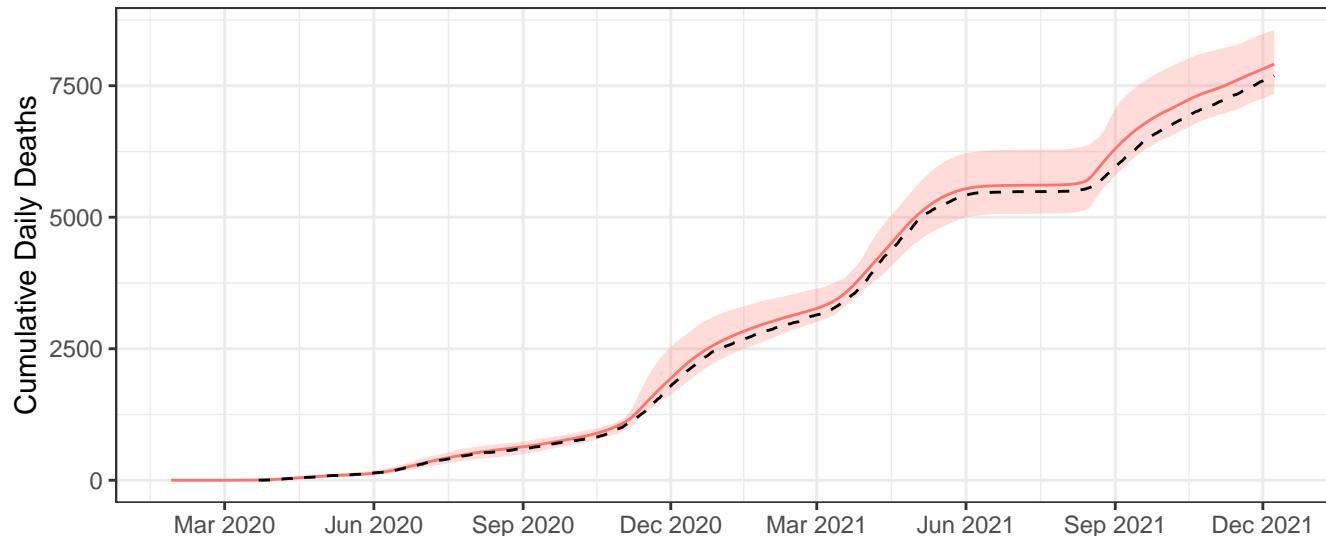

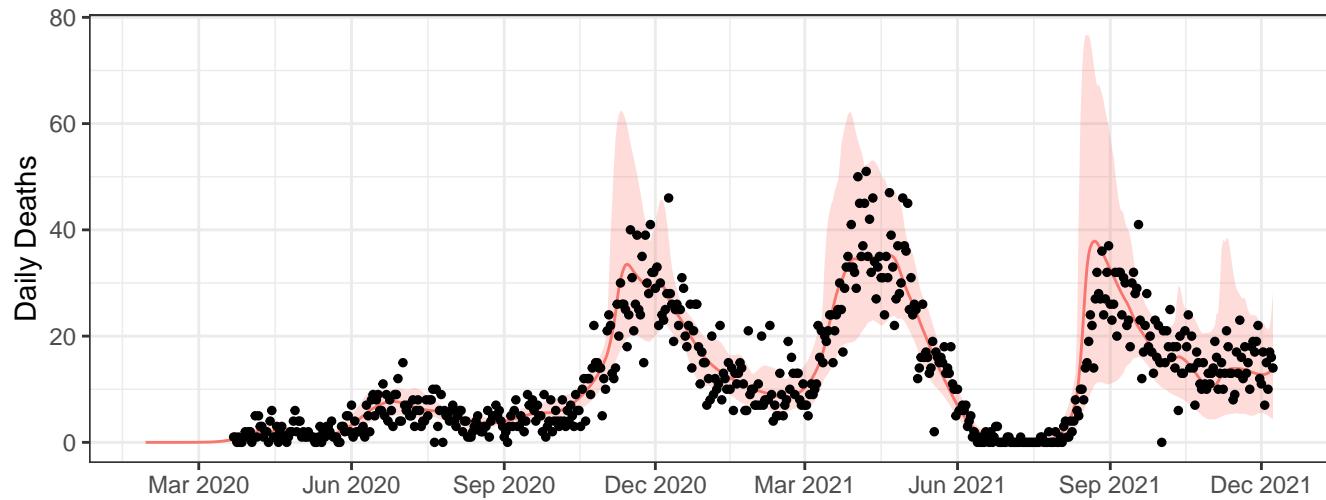

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mexico

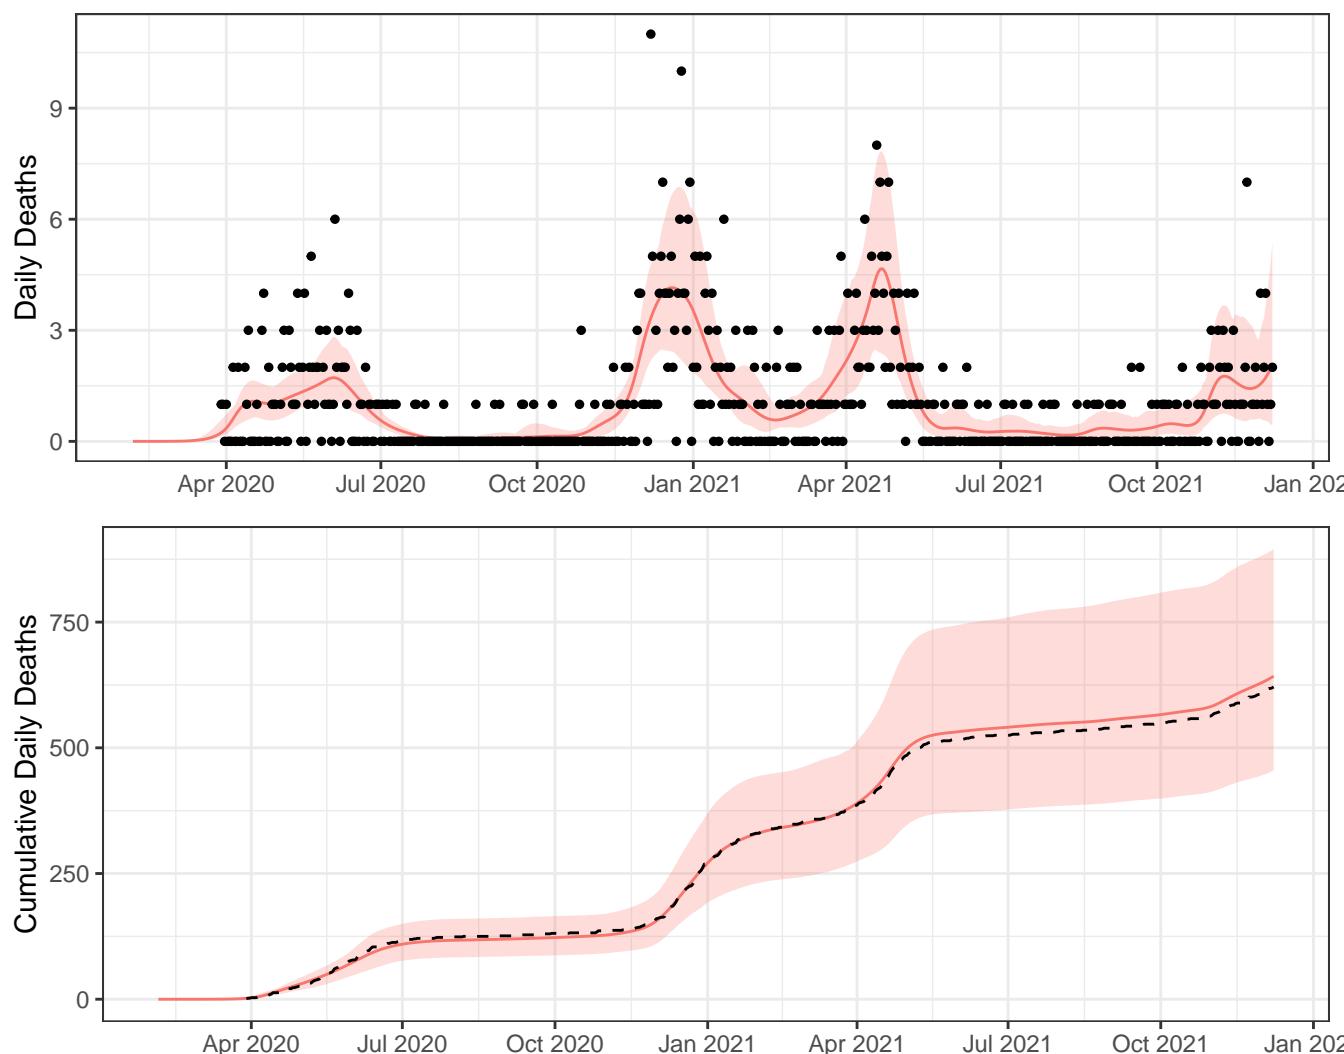

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# North Macedonia

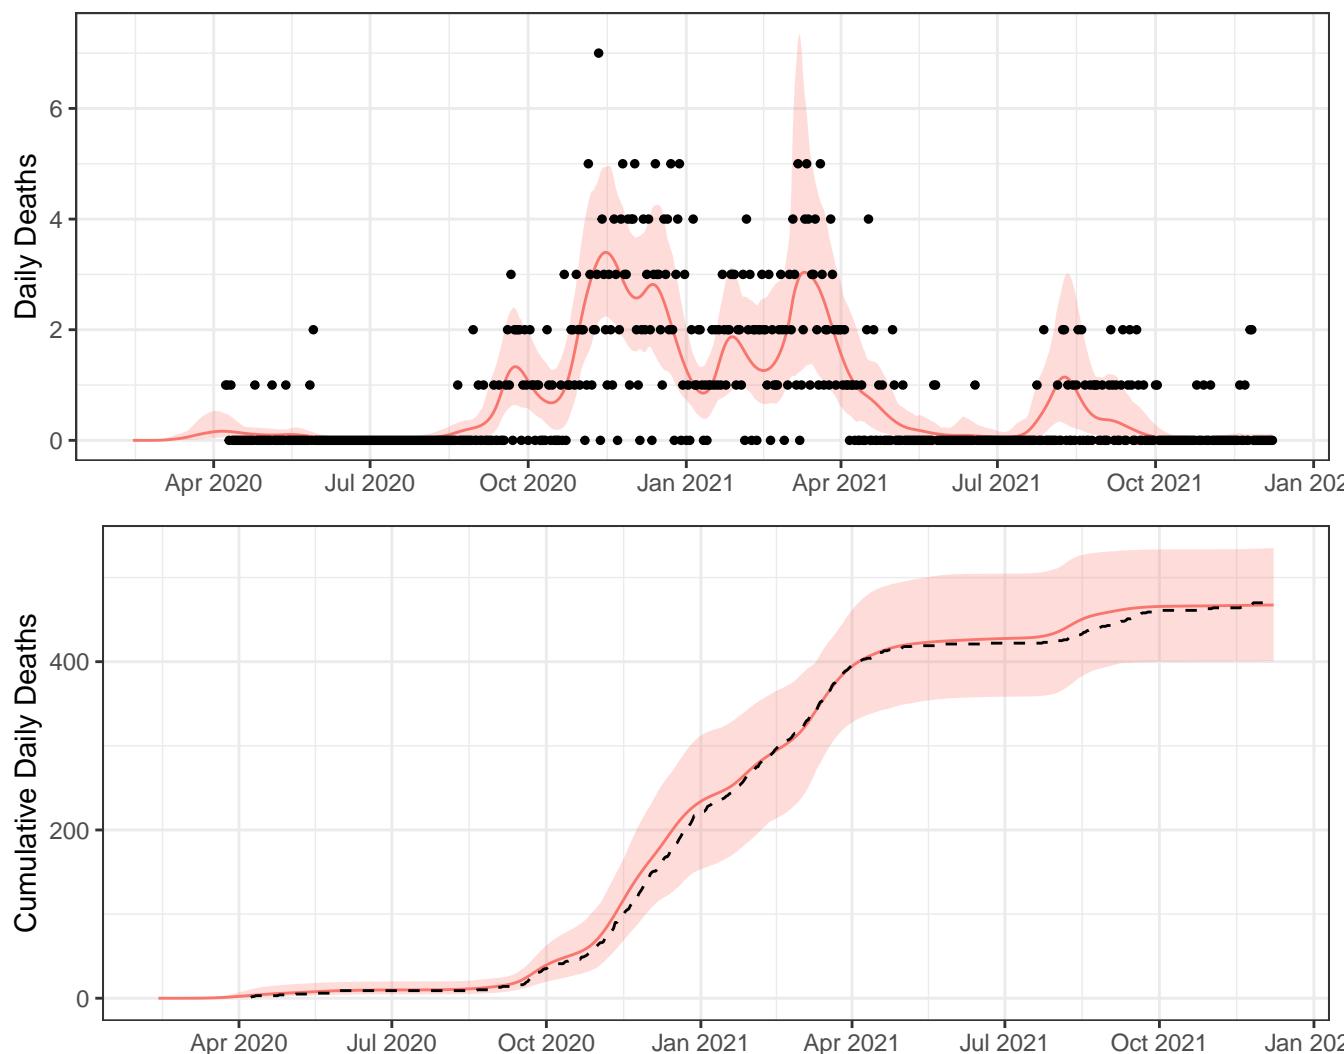

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mali

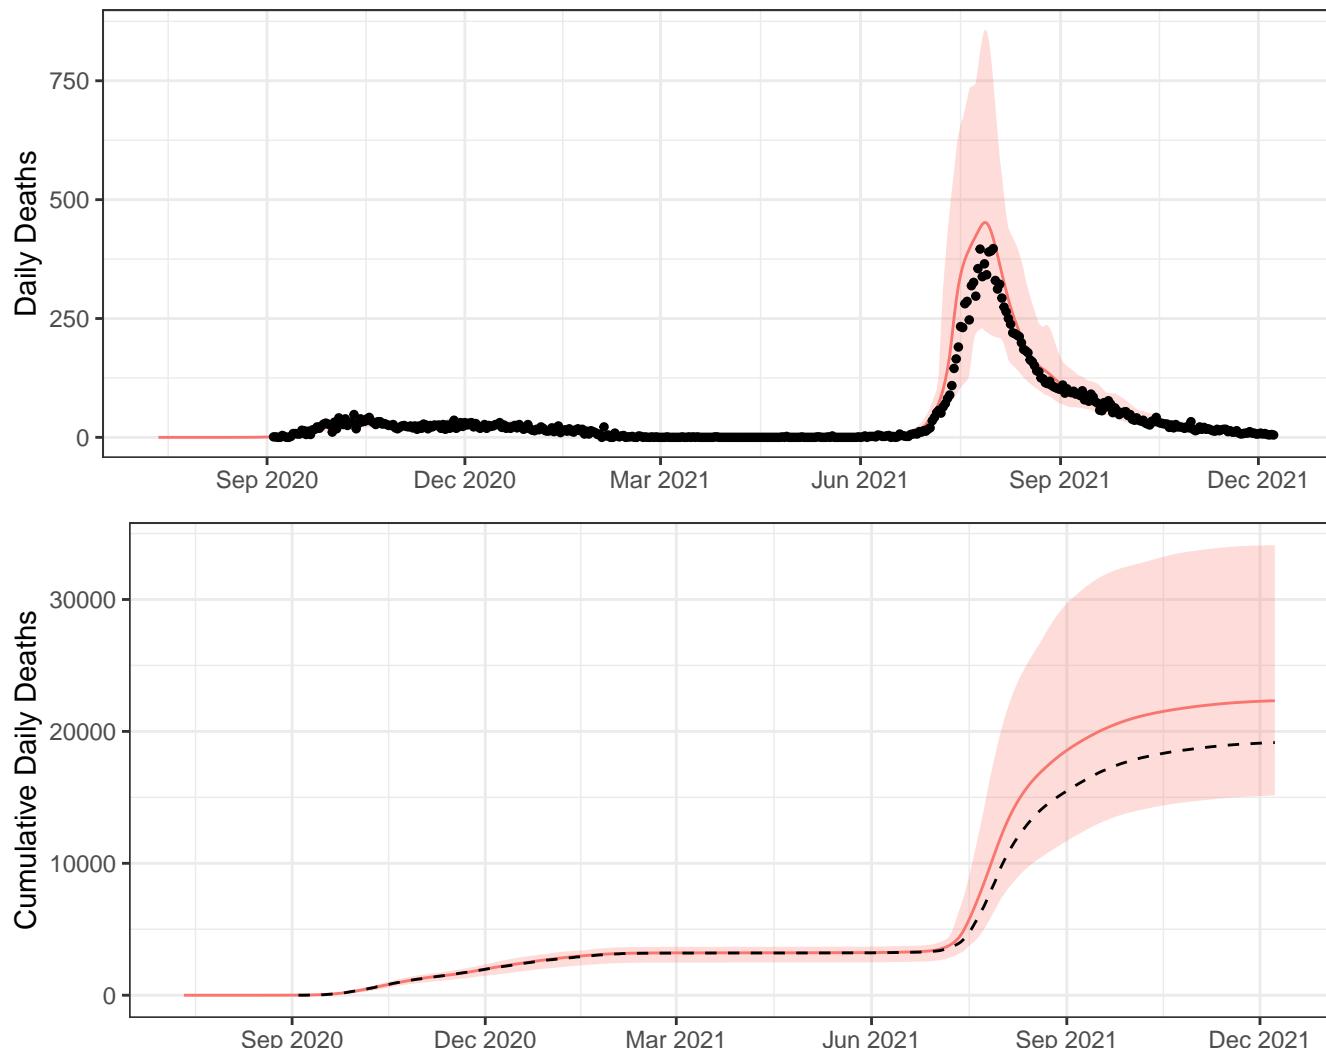

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Malta

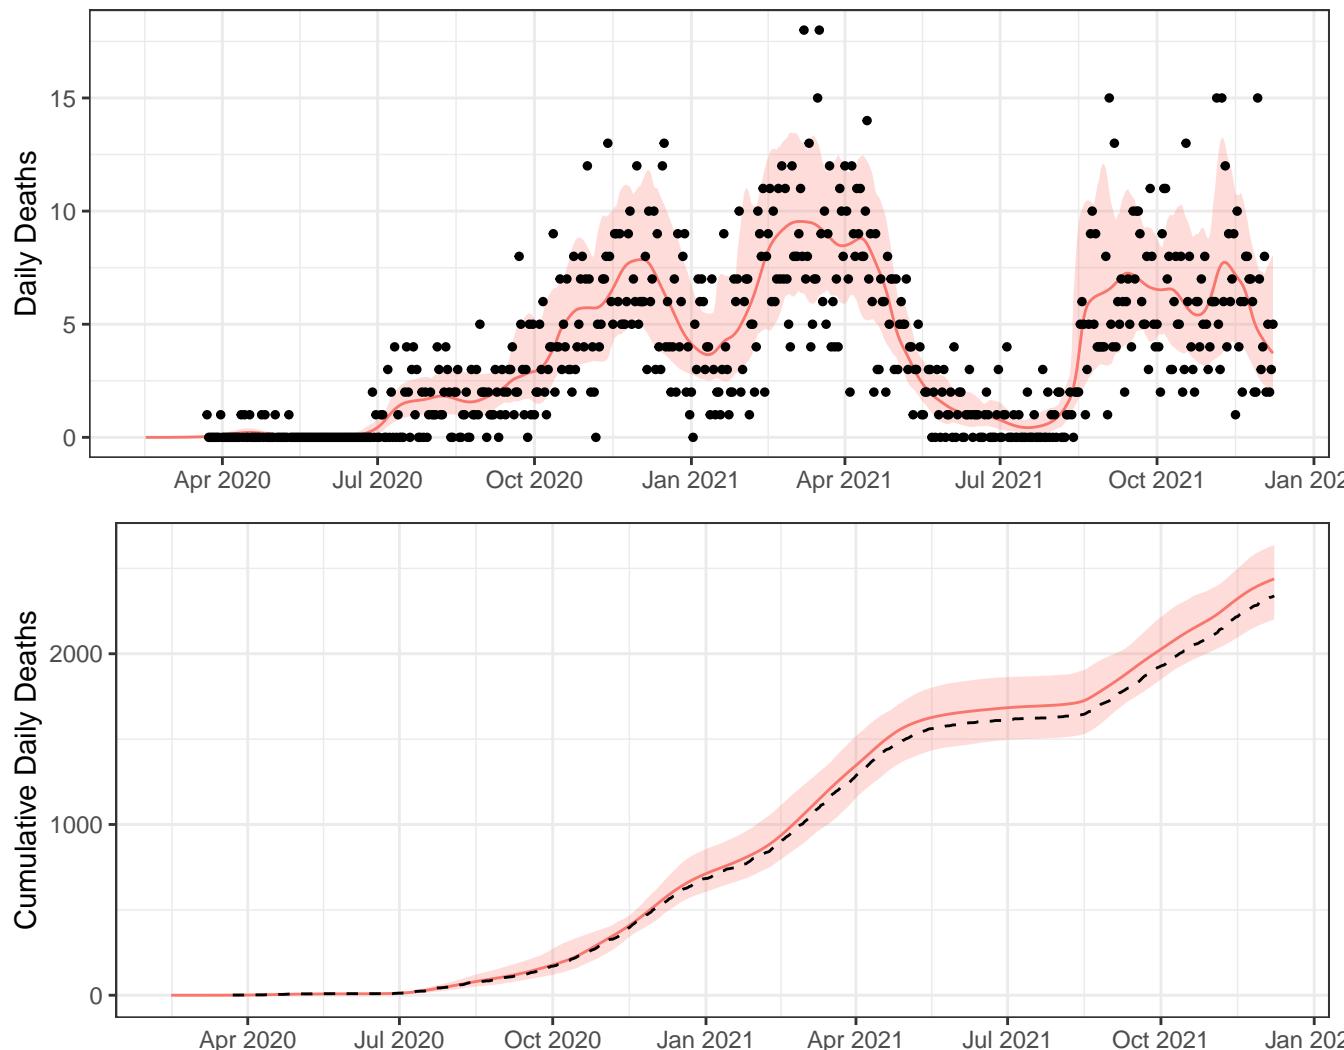

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Myanmar

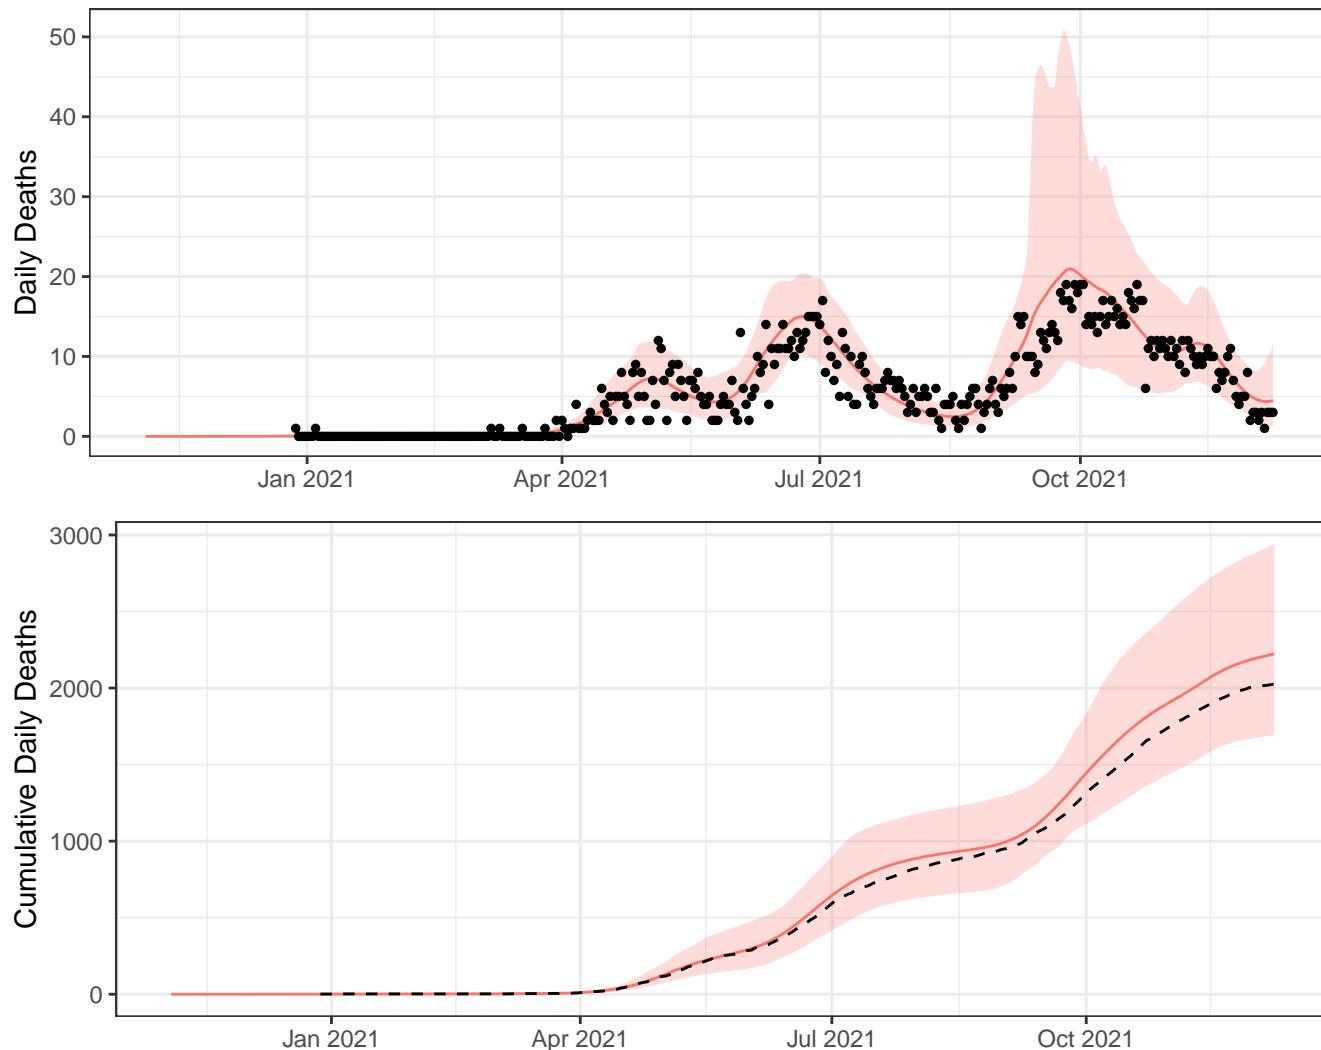

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Montenegro

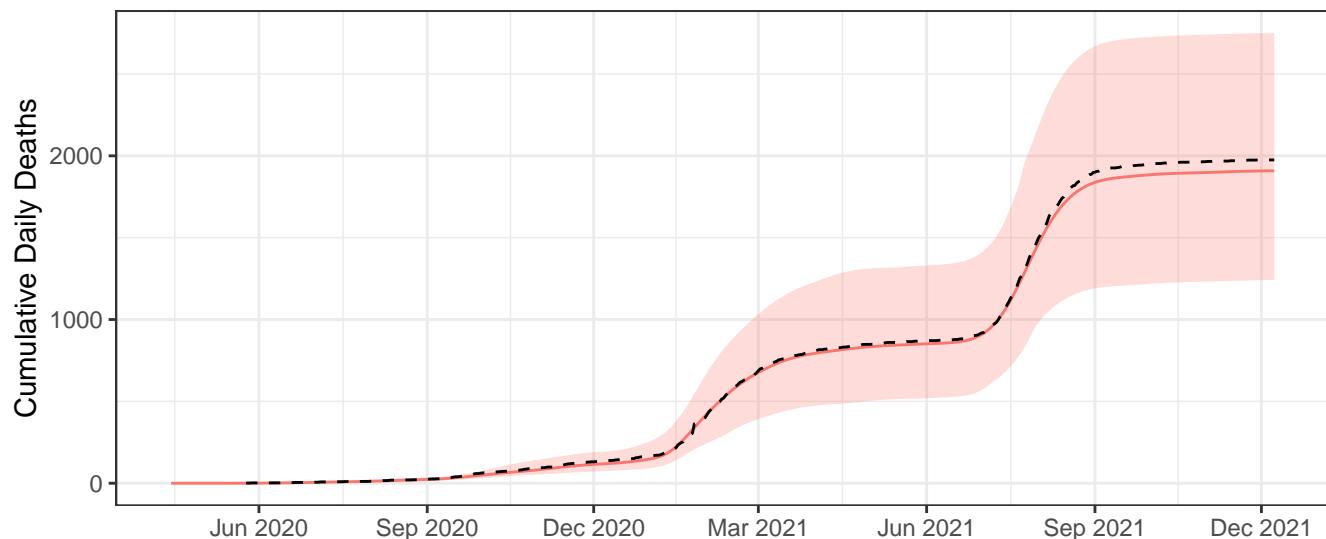

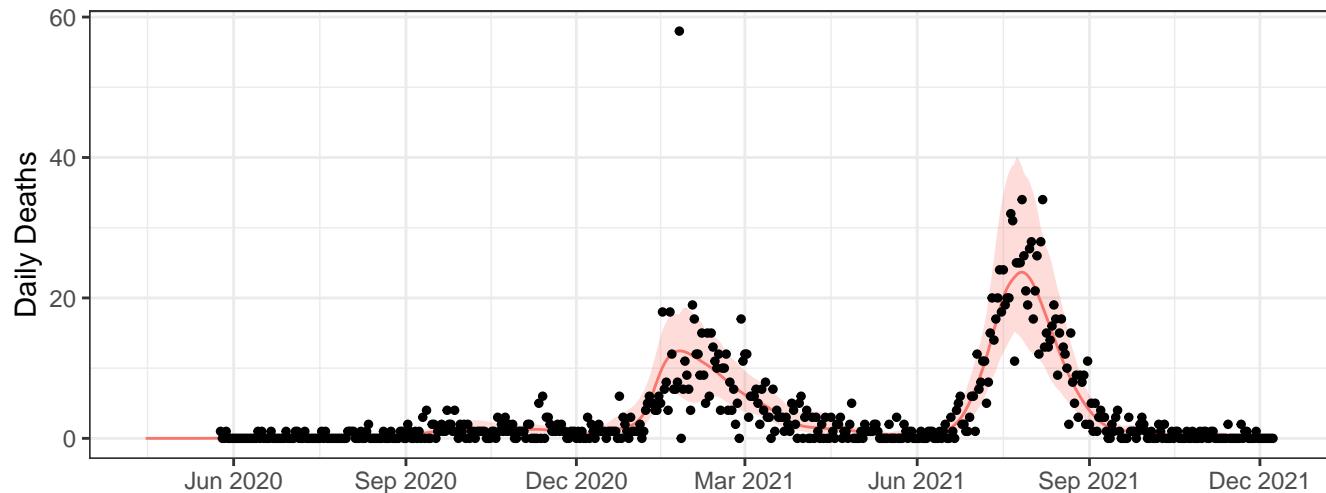

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mongolia

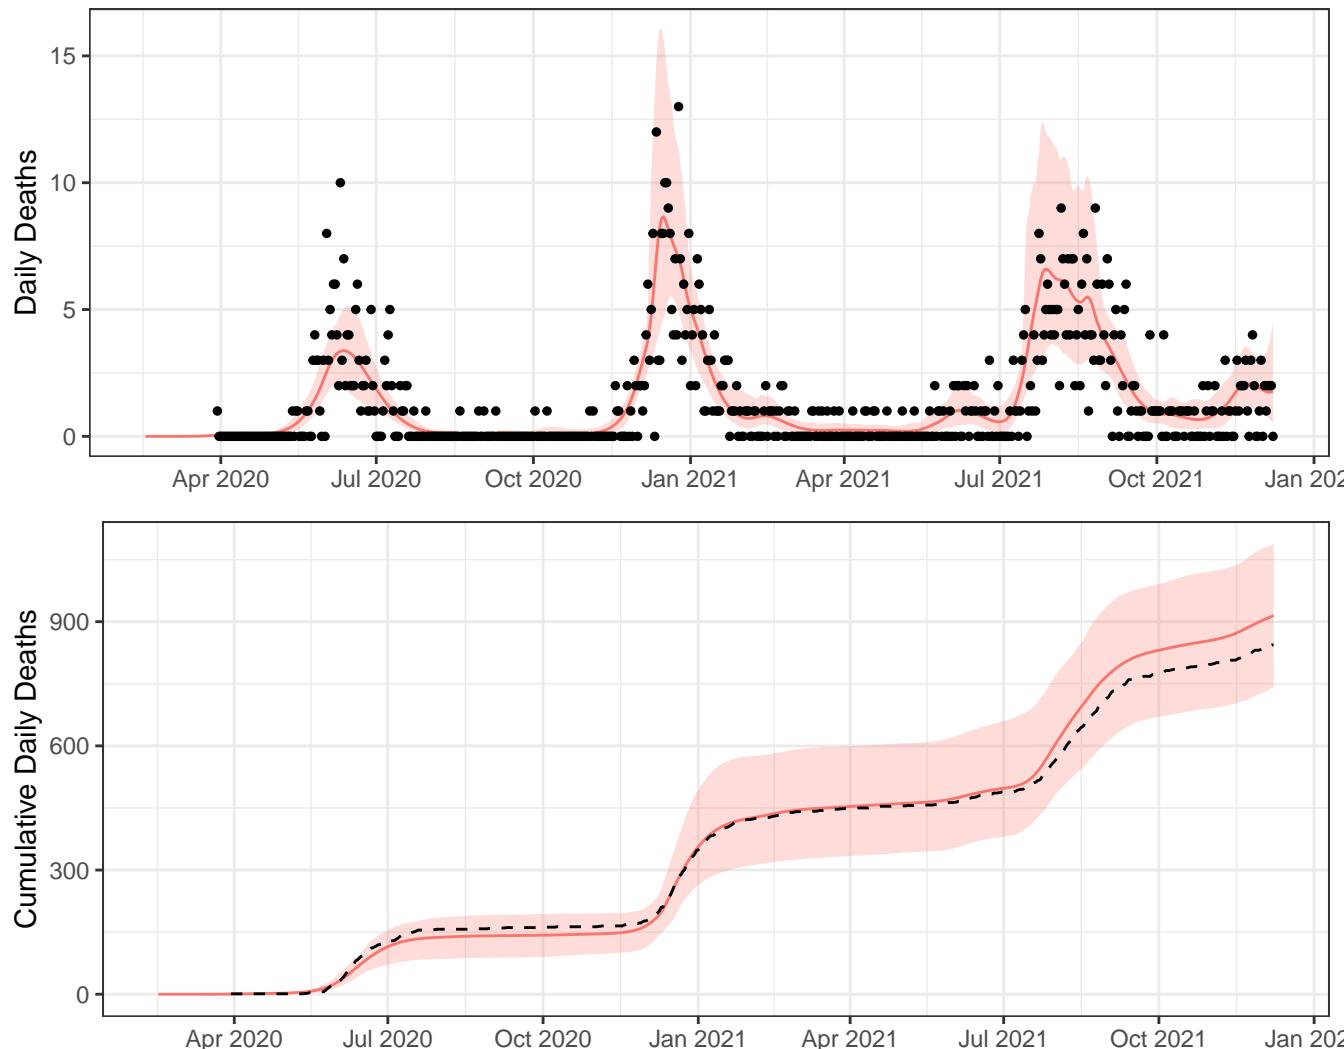

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mozambique

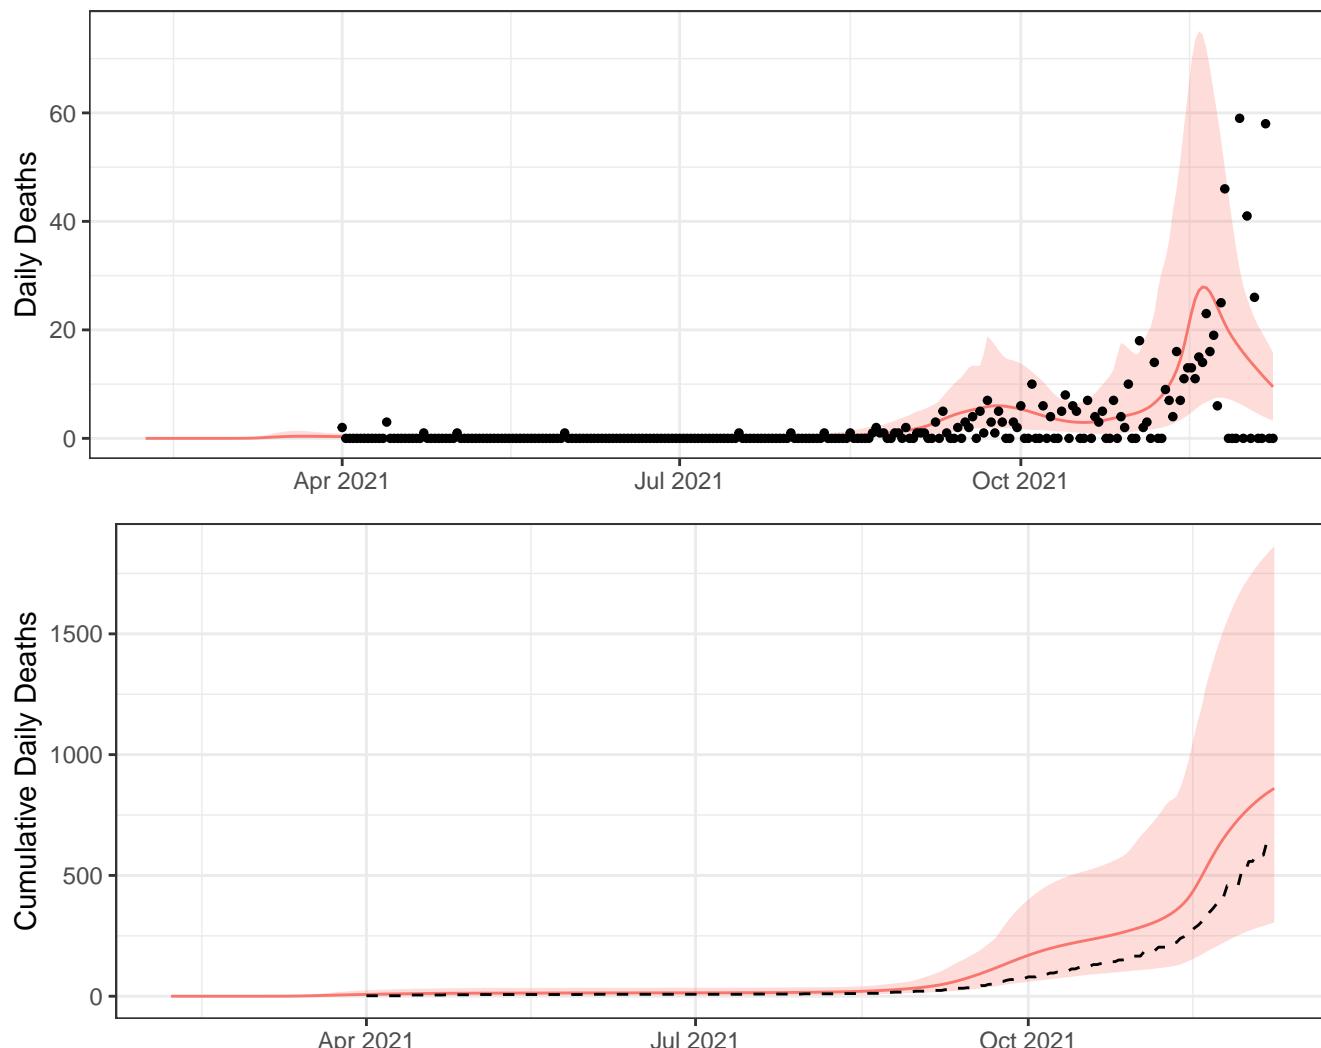

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mauritania

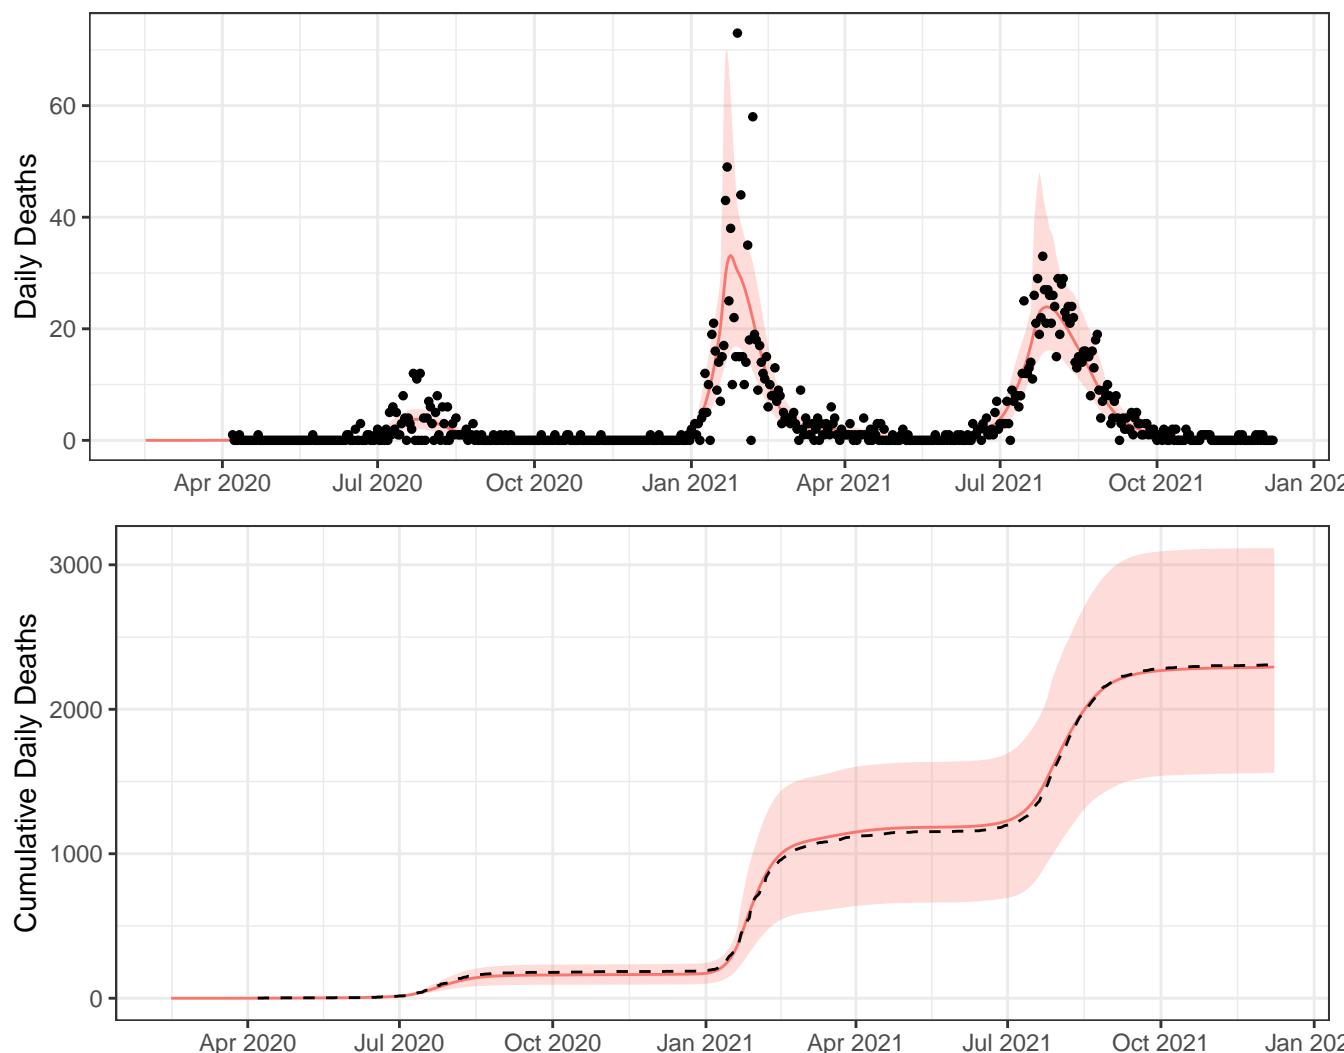

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Mauritius

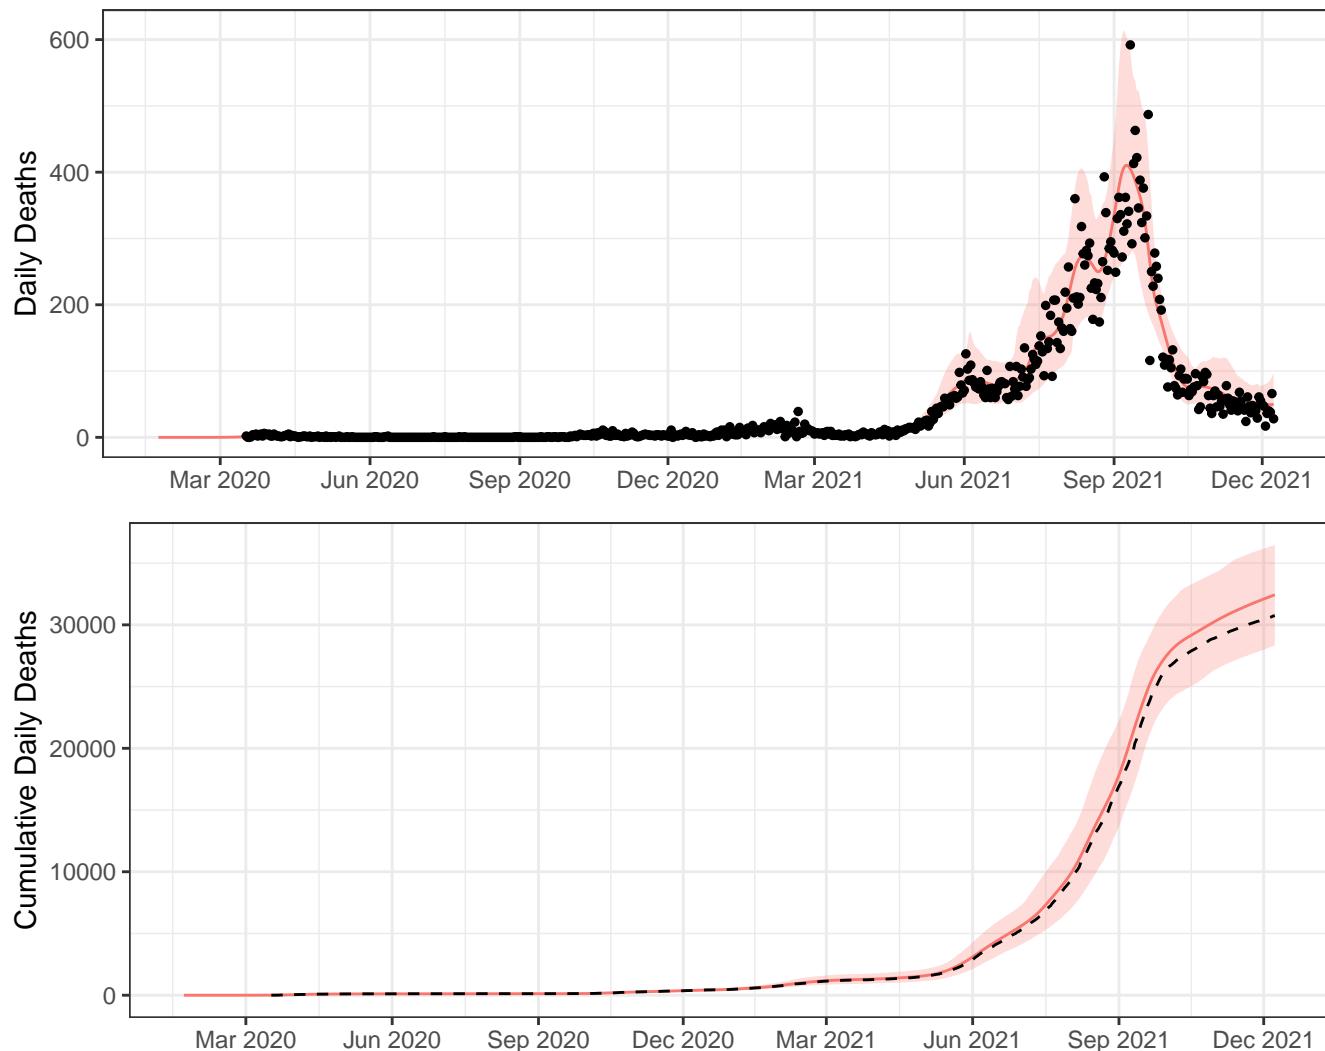

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Malawi

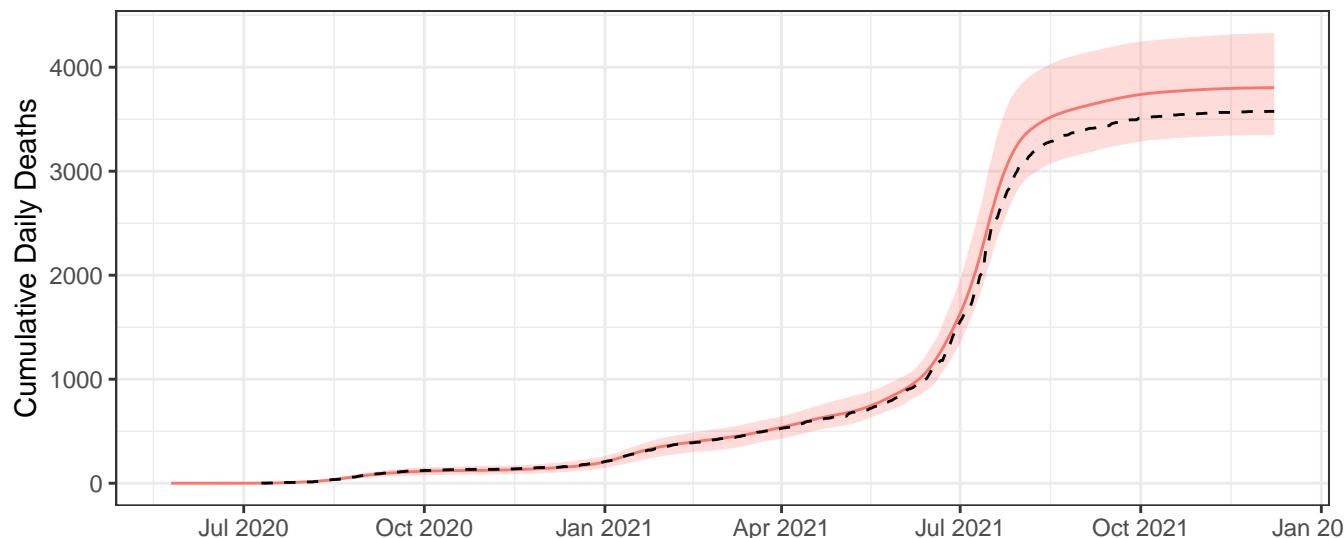

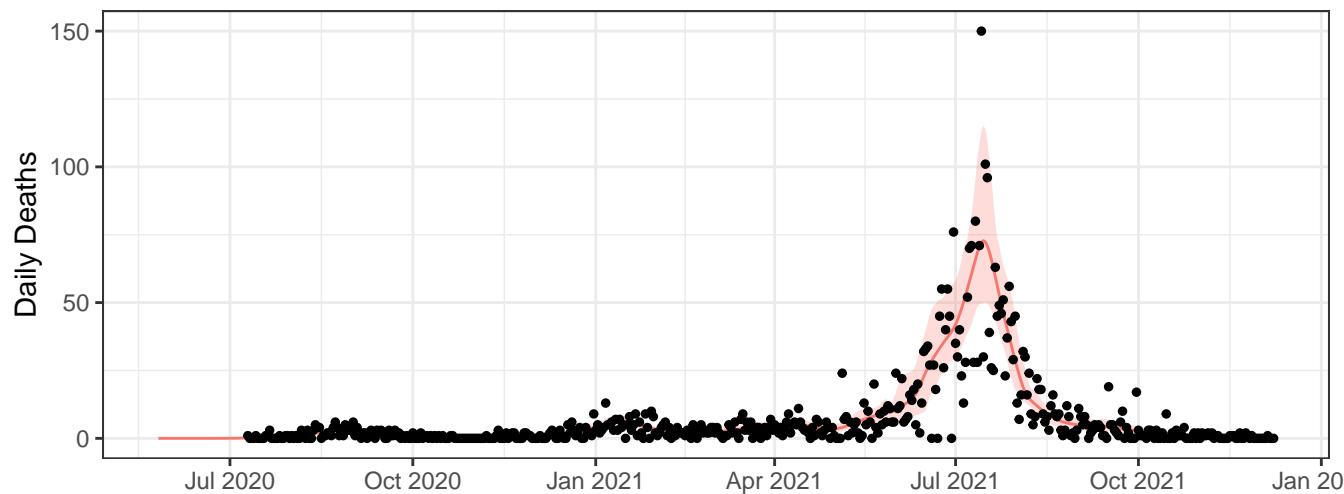

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Malaysia

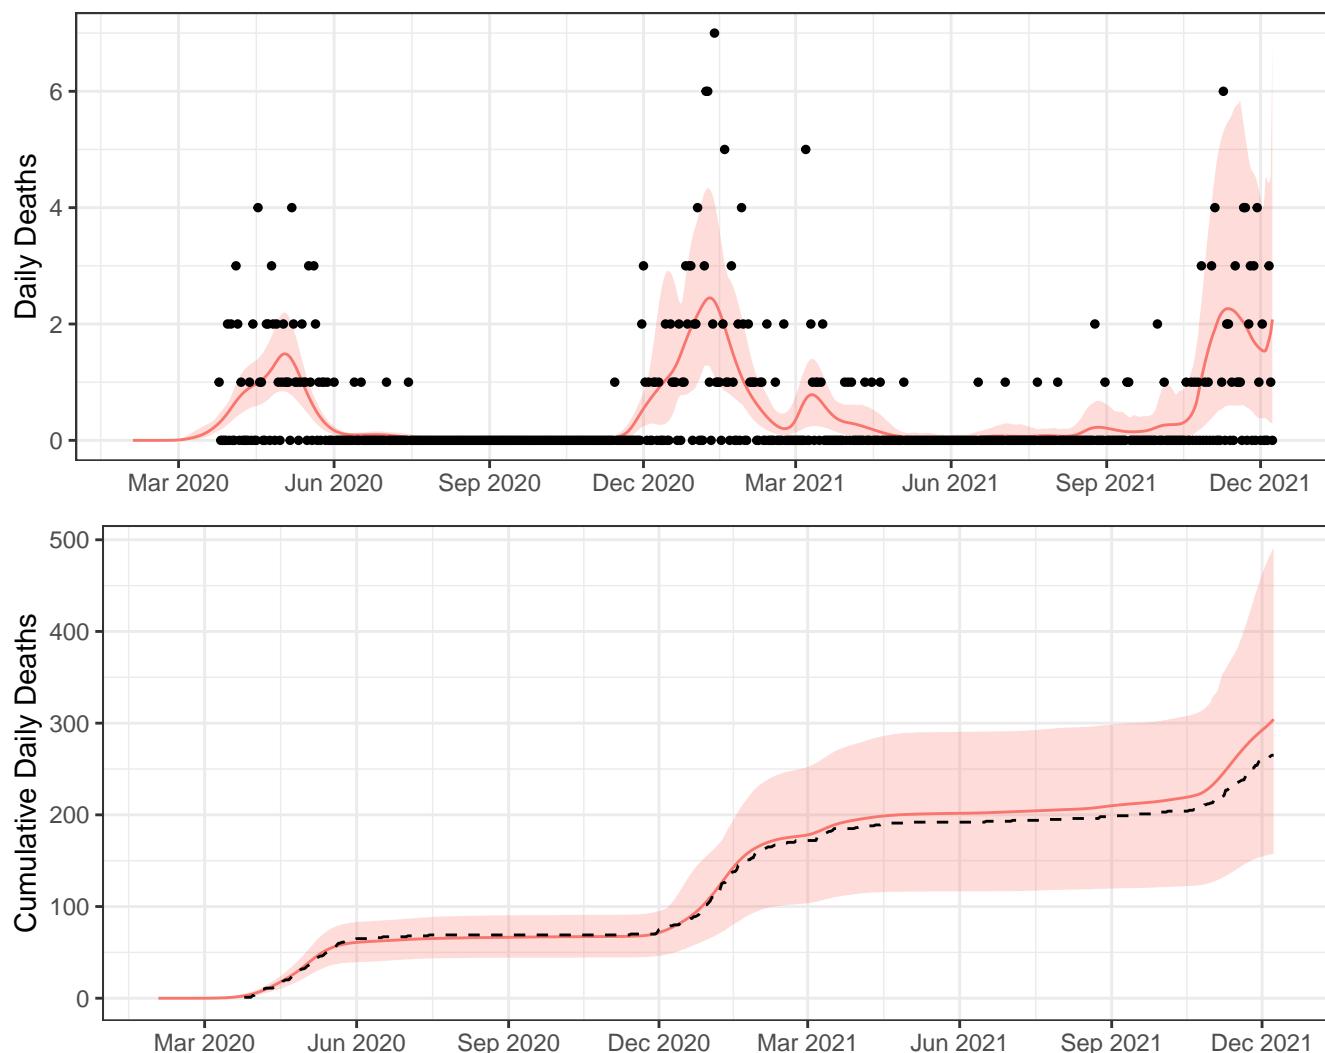

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Namibia

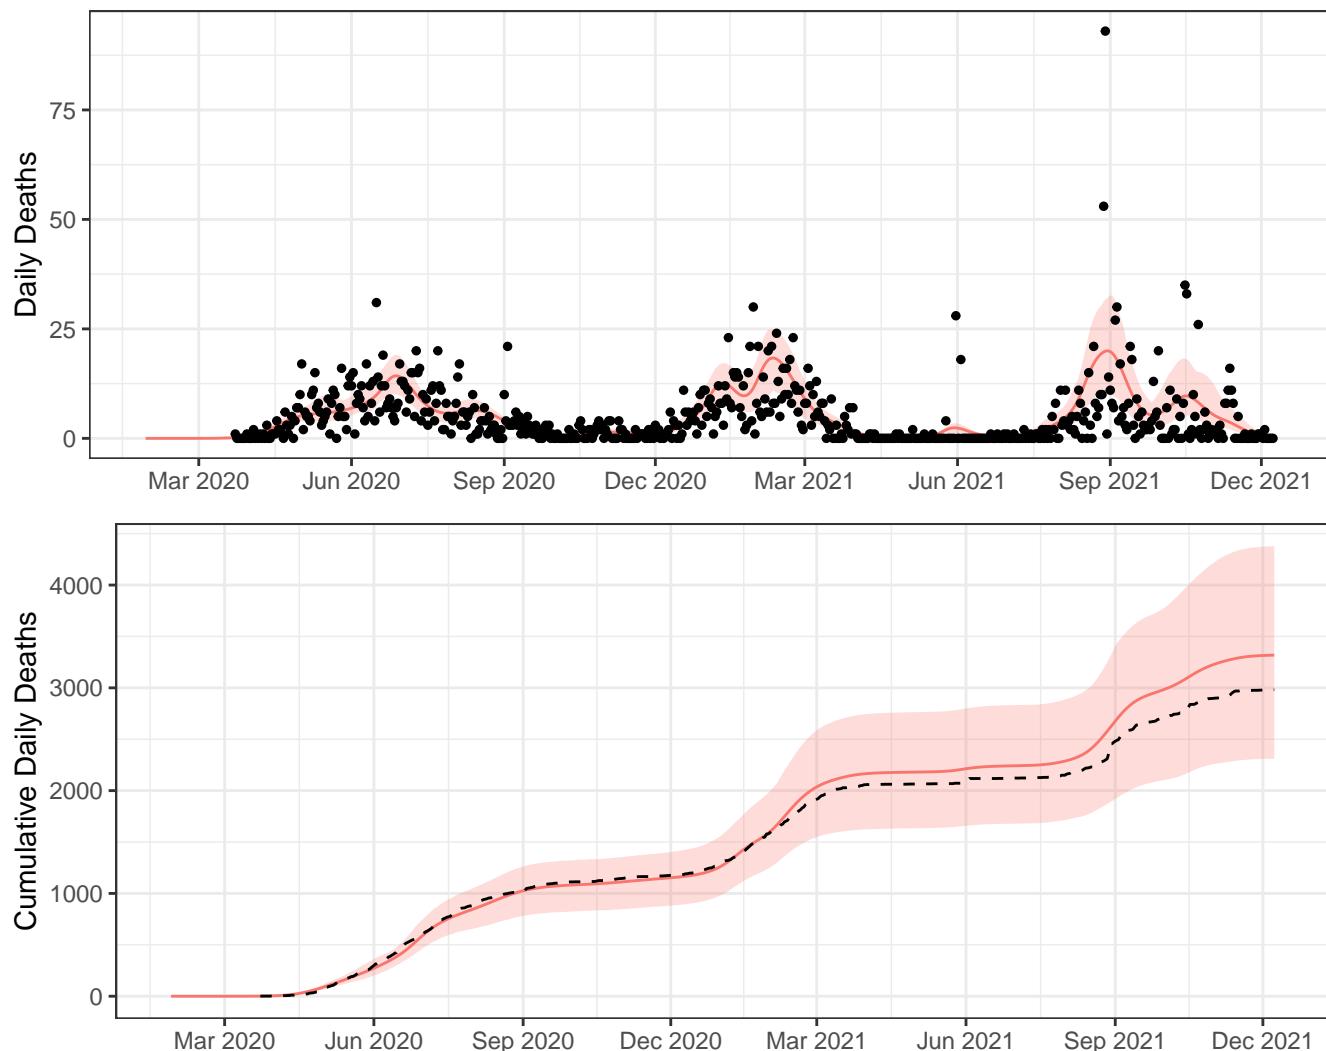

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Niger

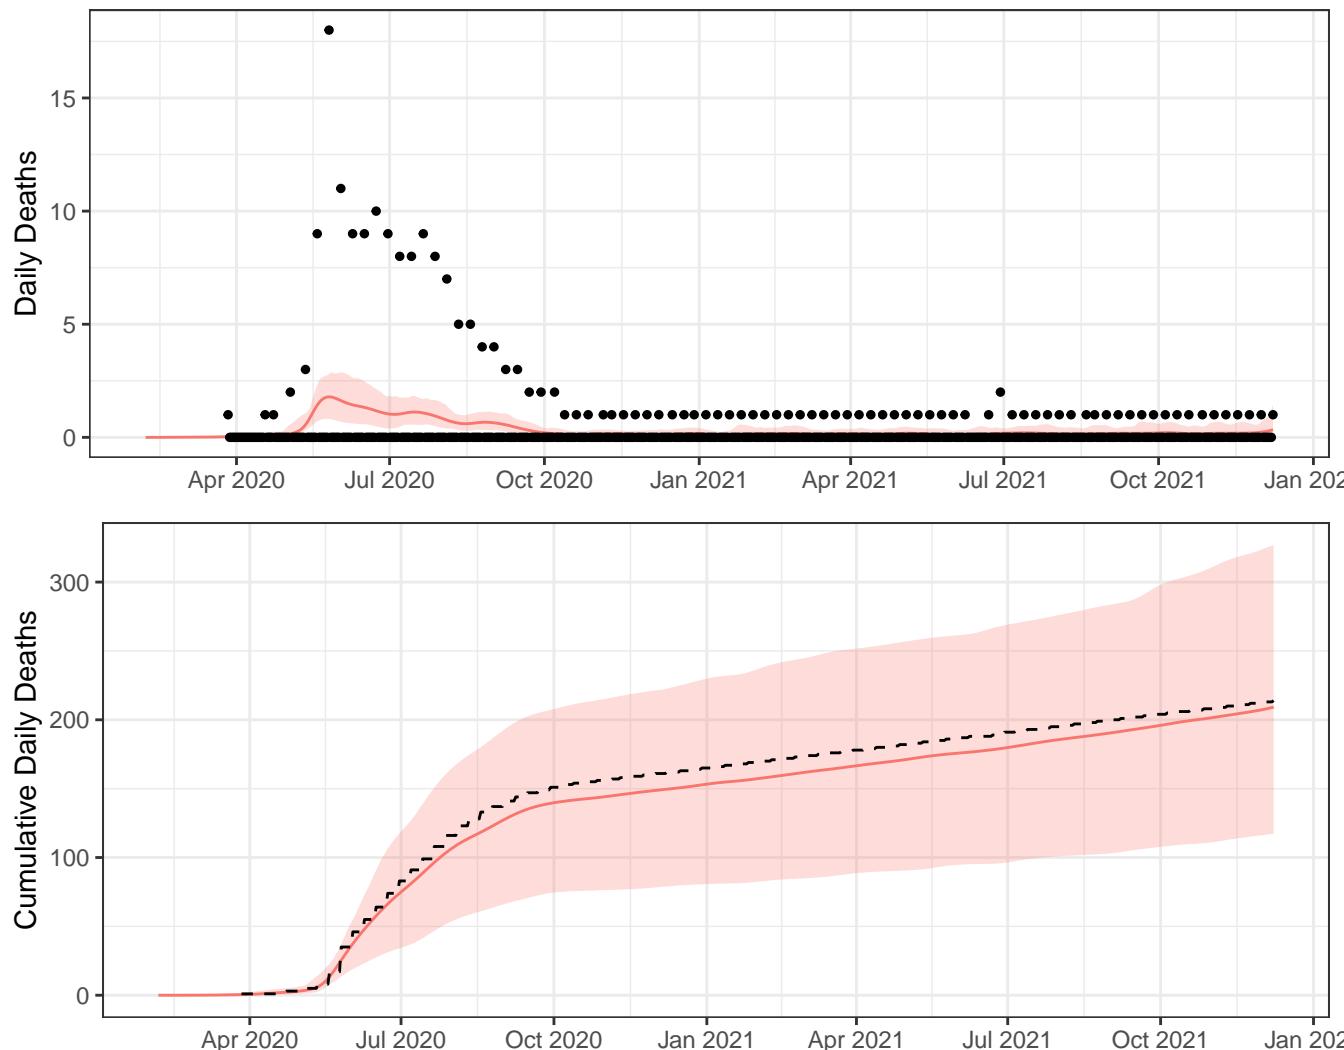

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Nigeria

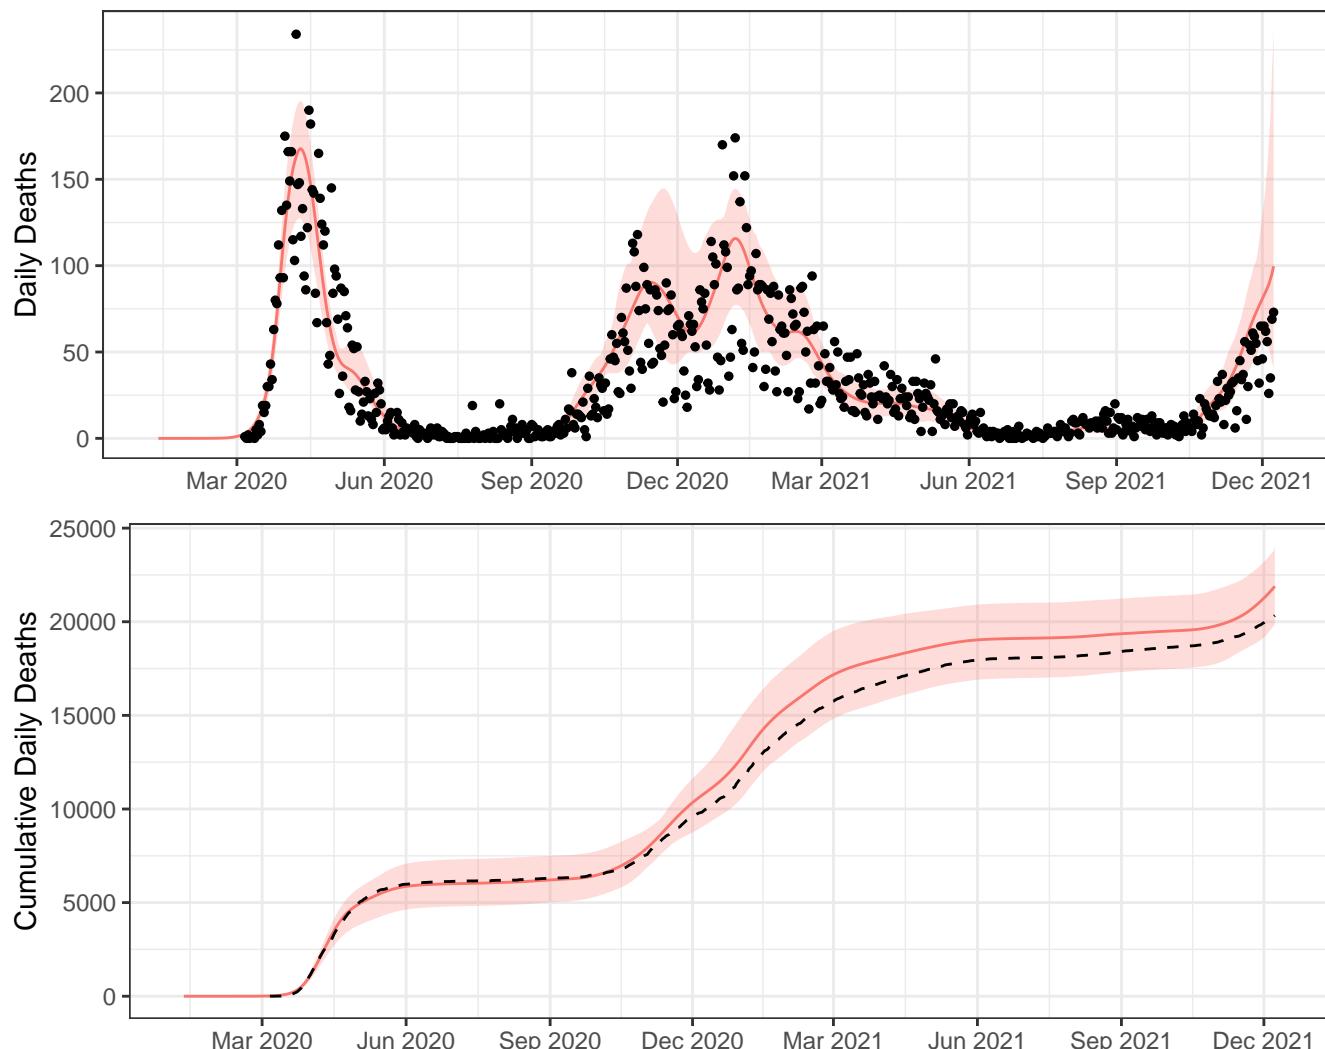

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Nicaragua

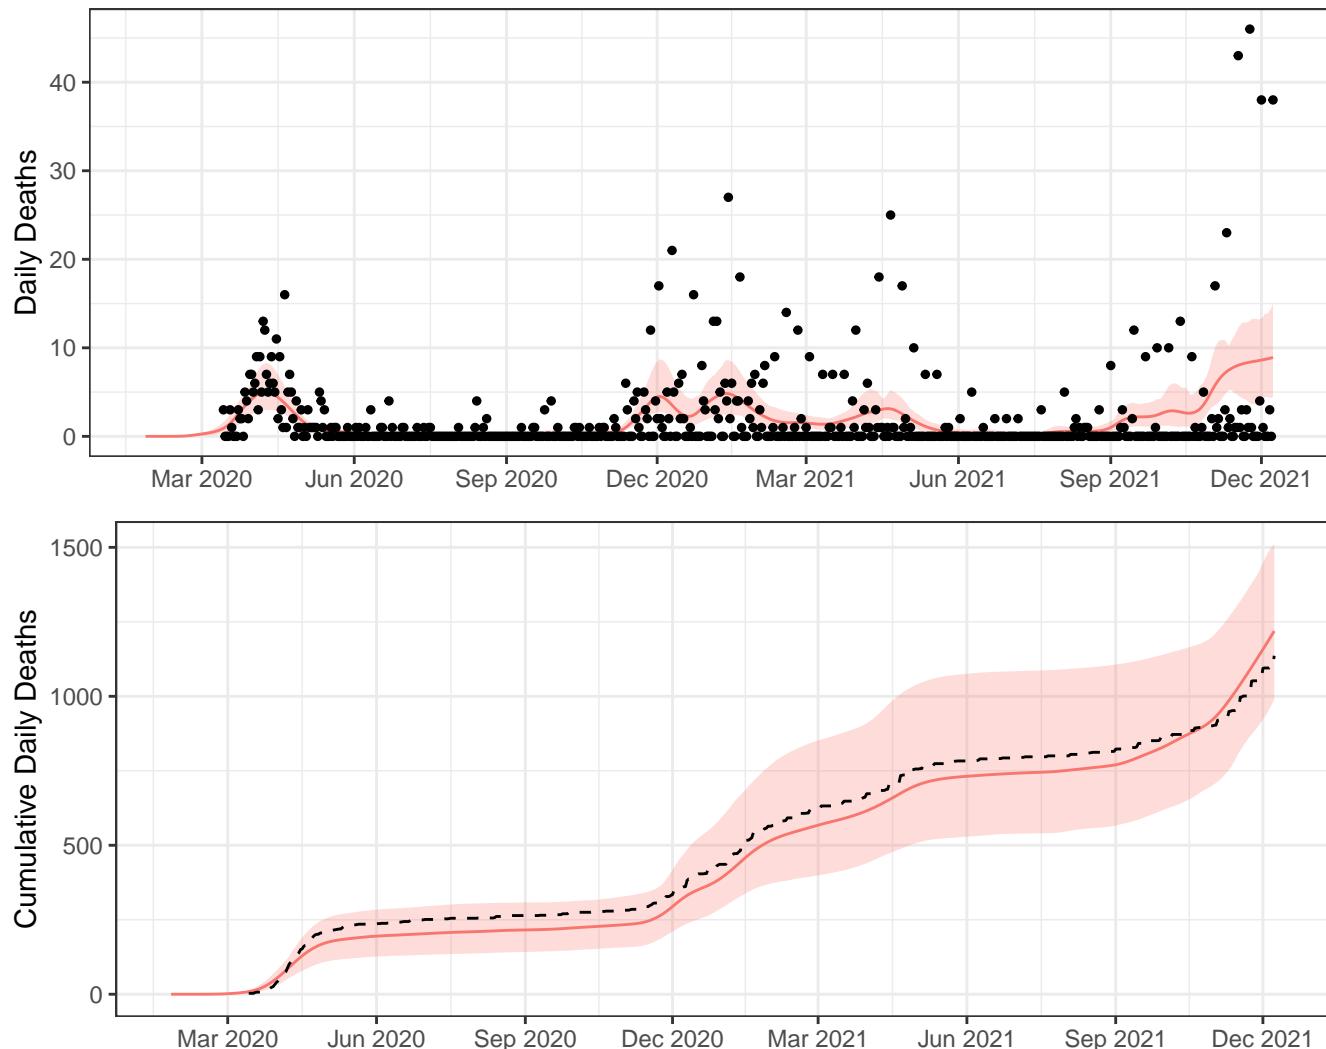

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Netherlands

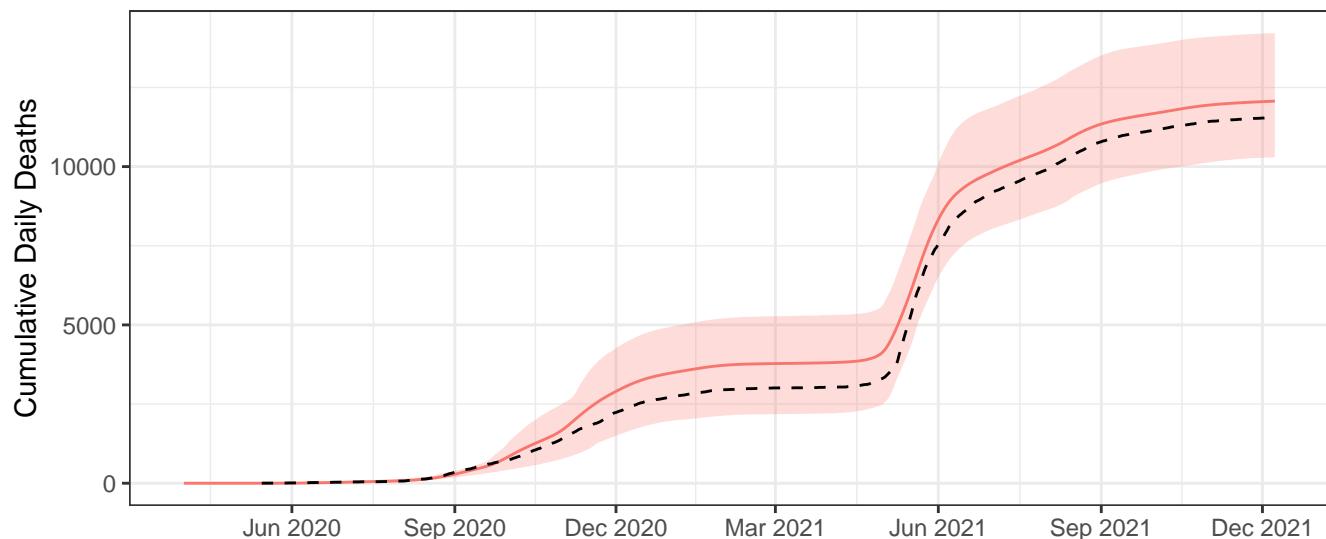

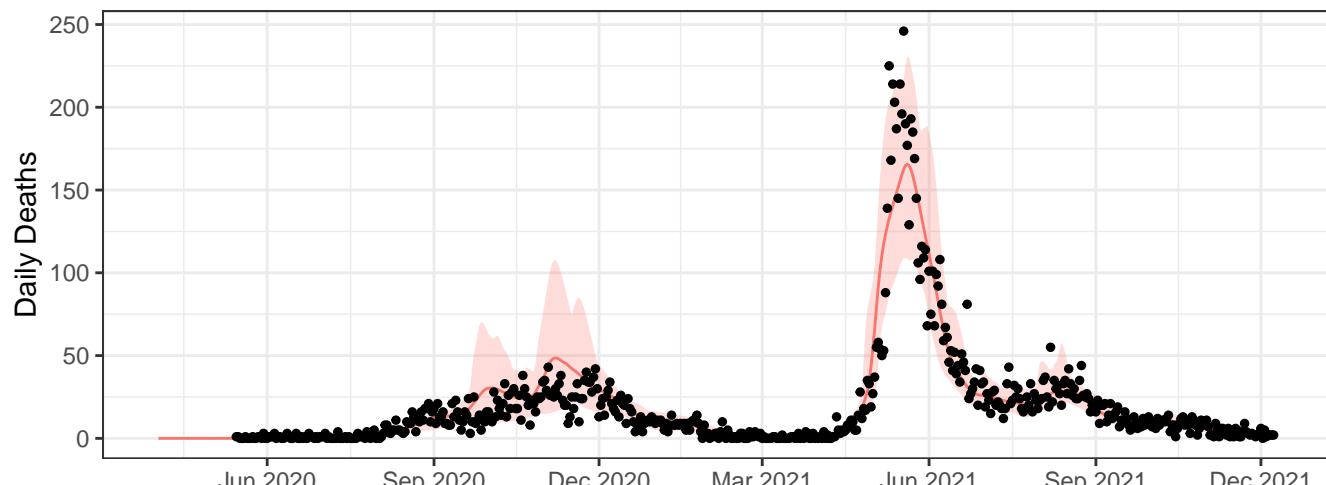

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Norway

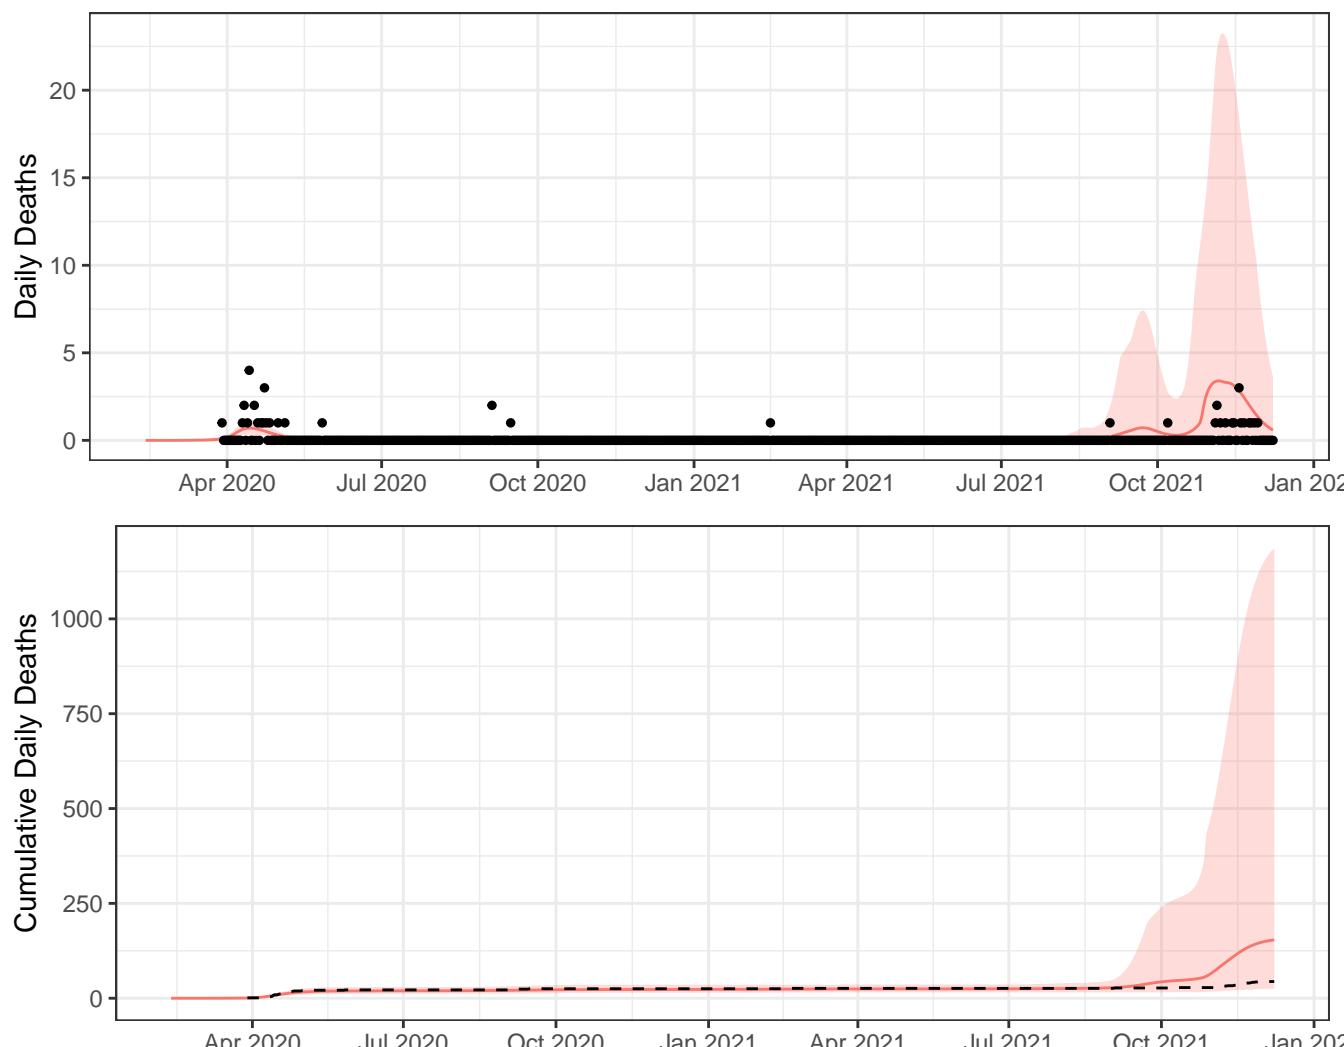

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Nepal

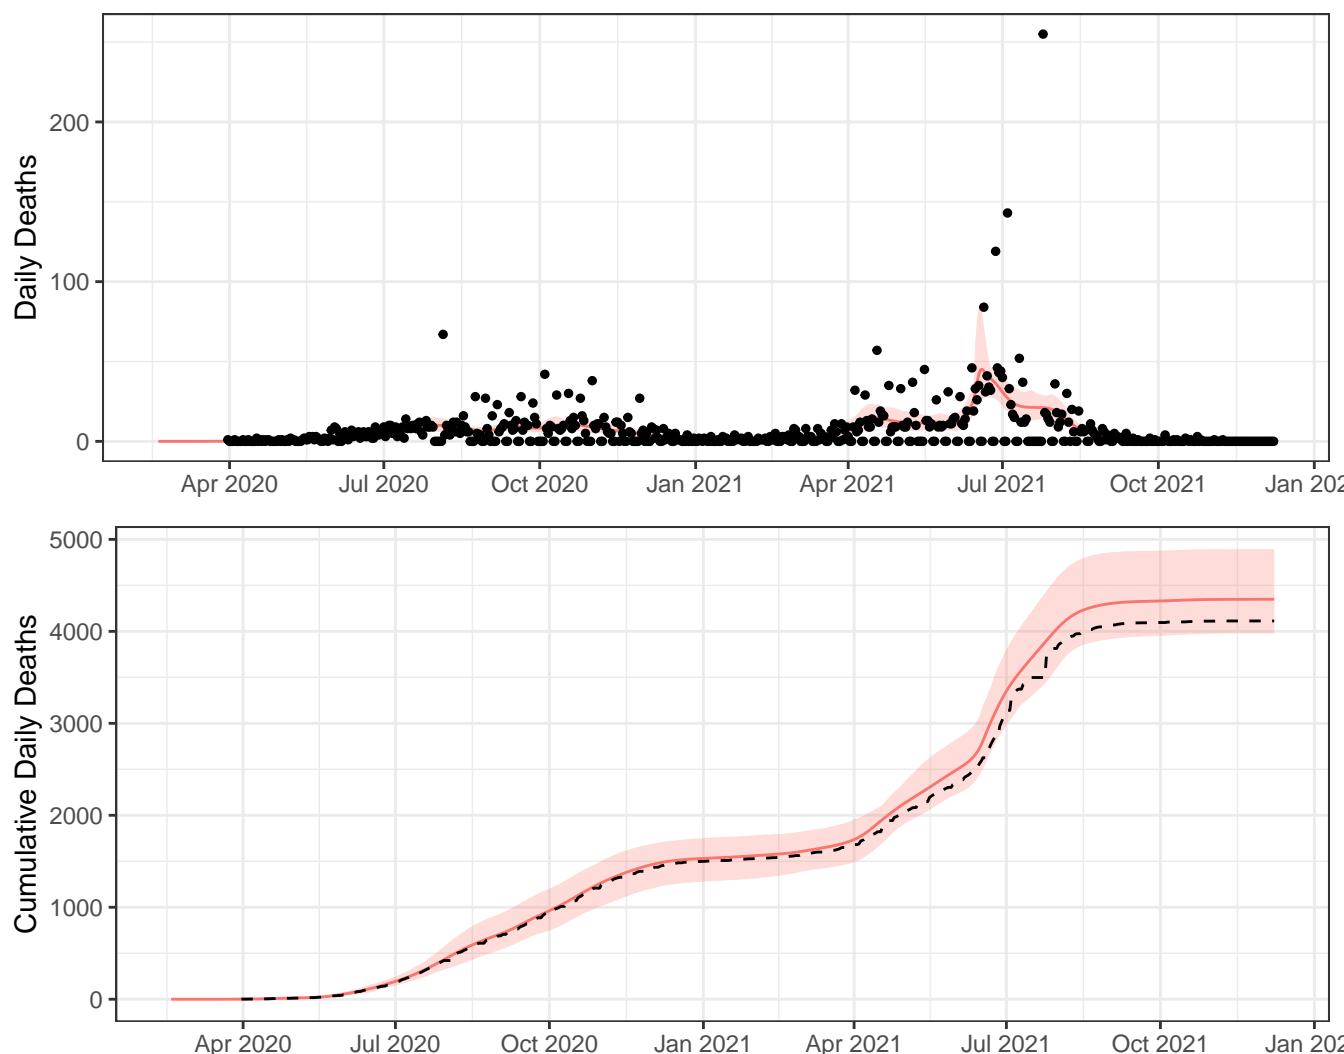

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# New Zealand

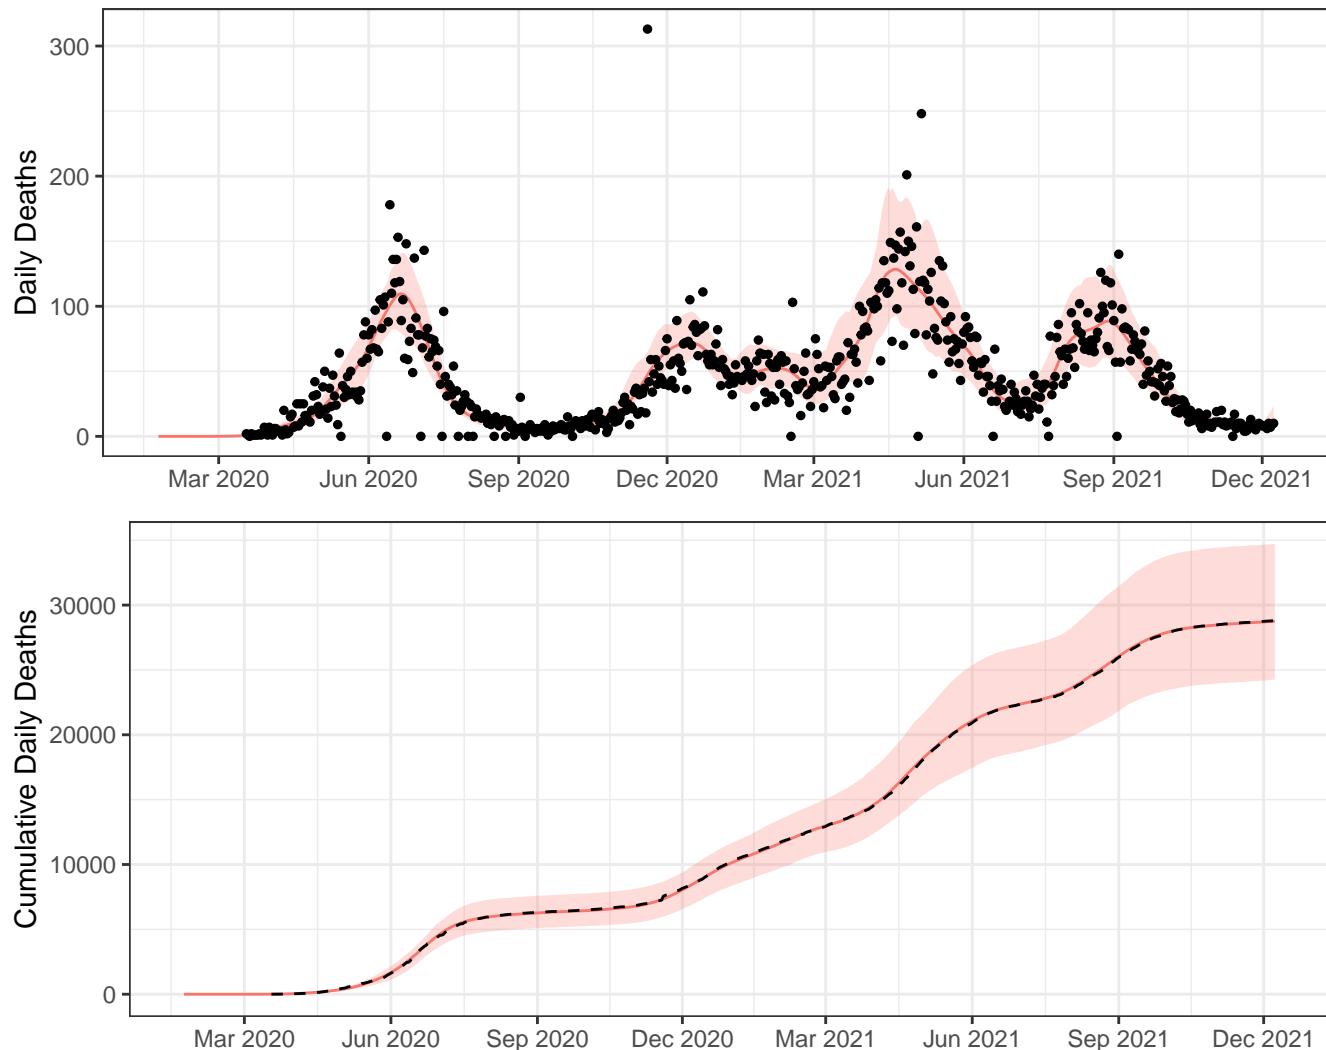

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Oman

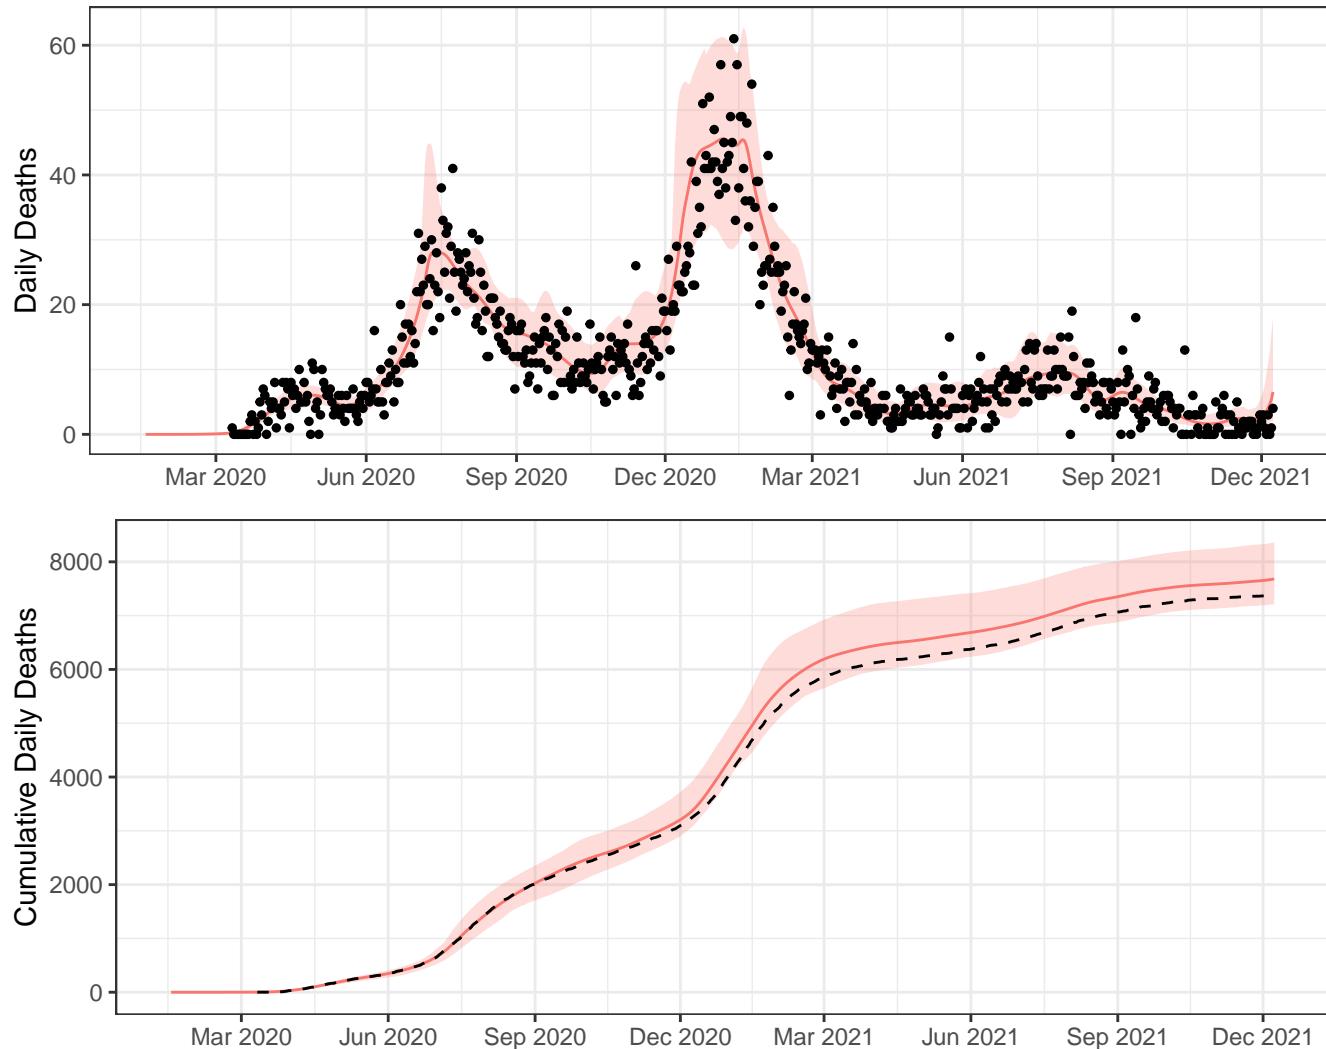

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Pakistan

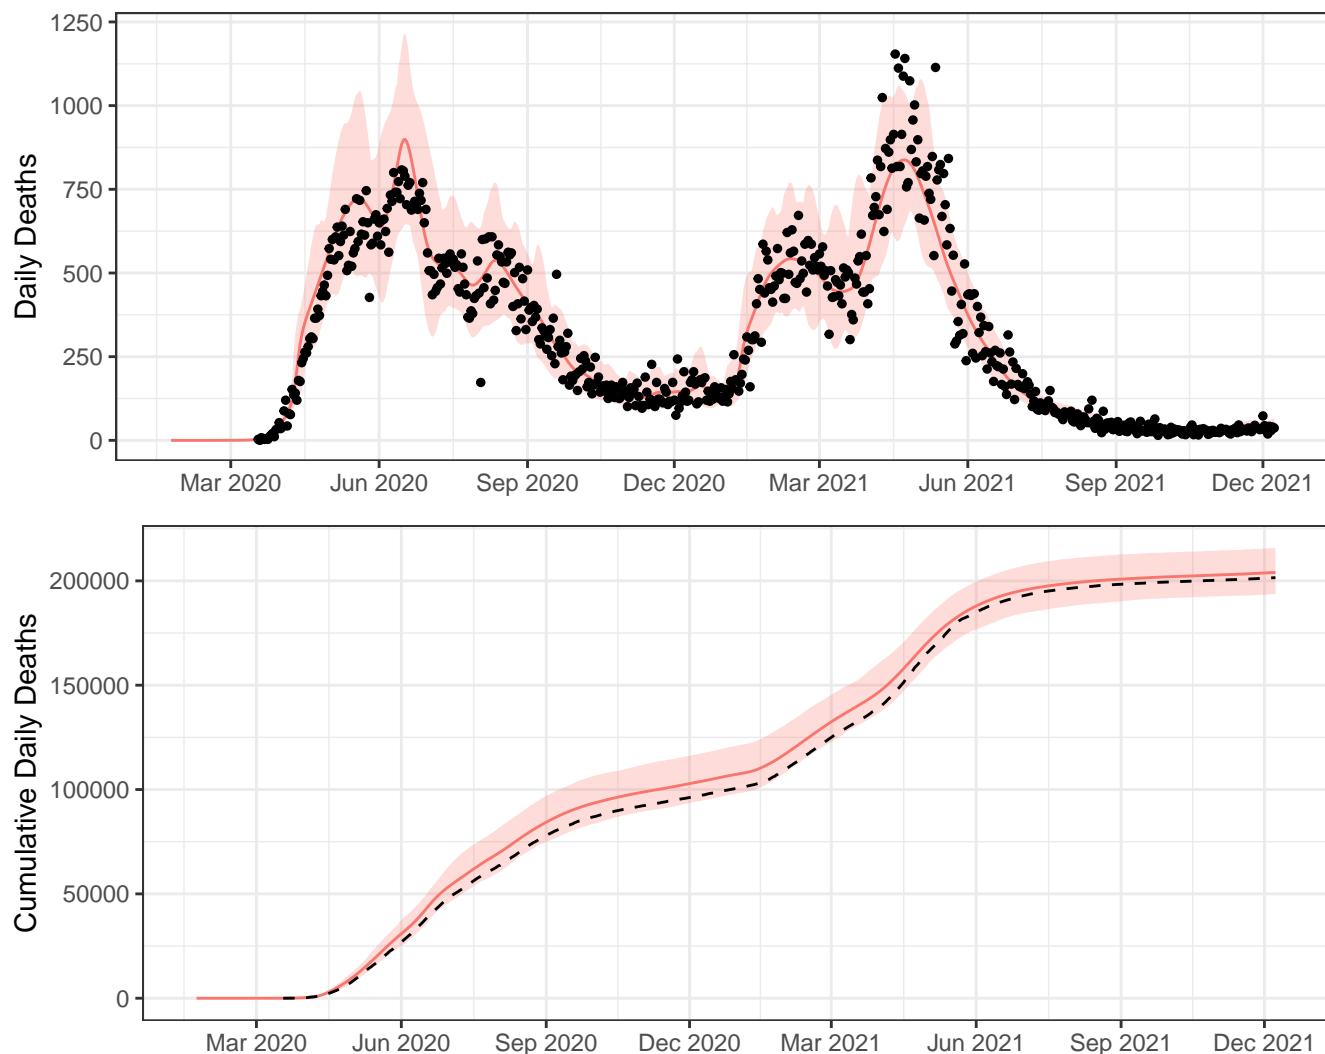

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Panama

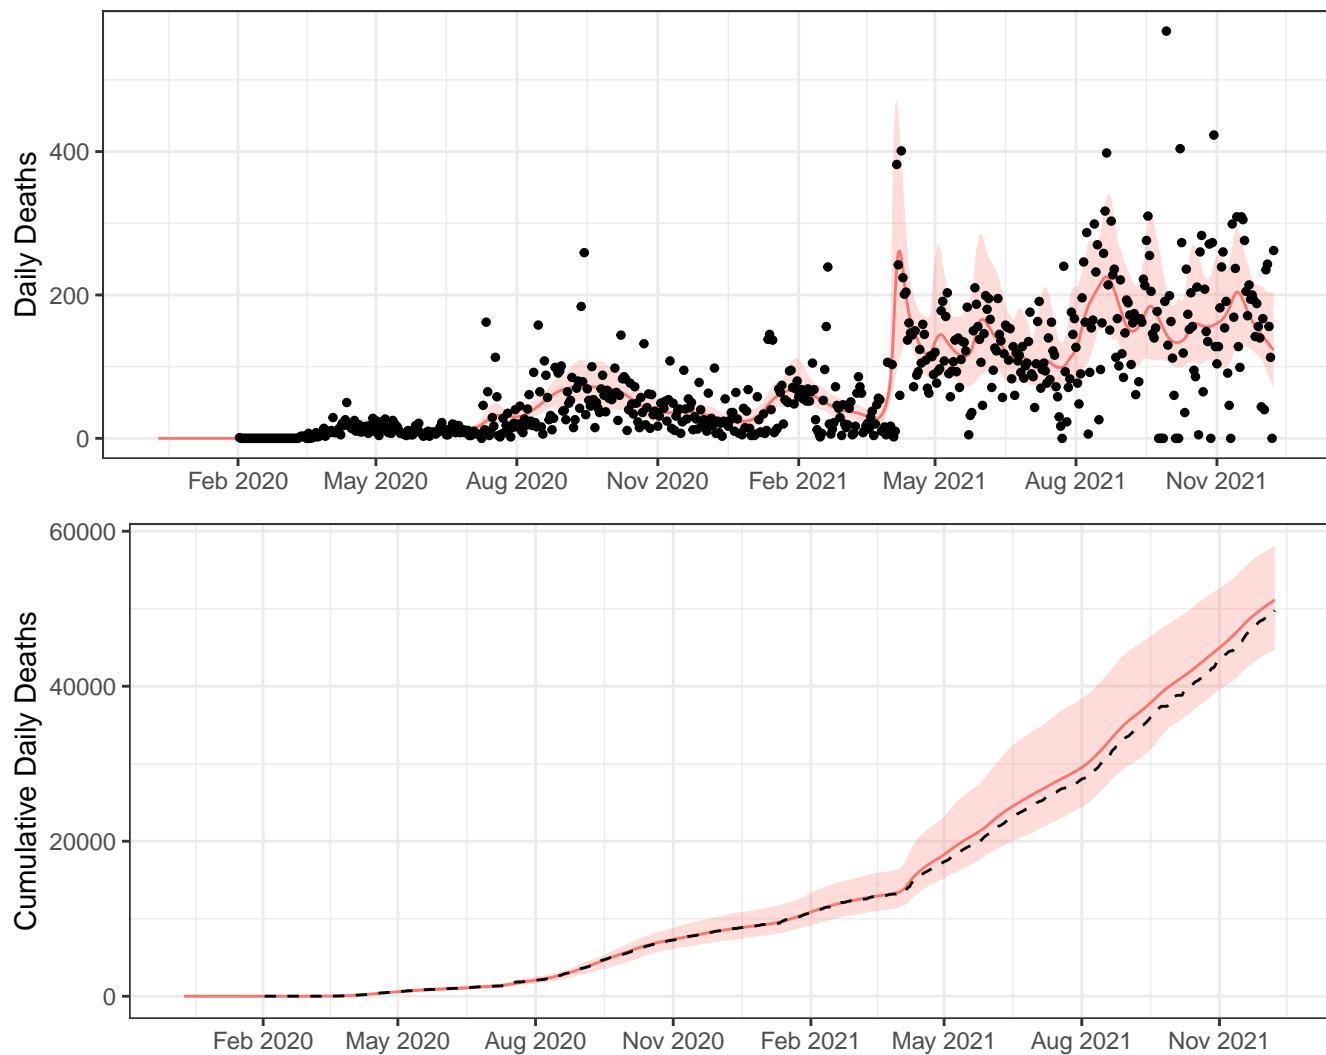

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Peru

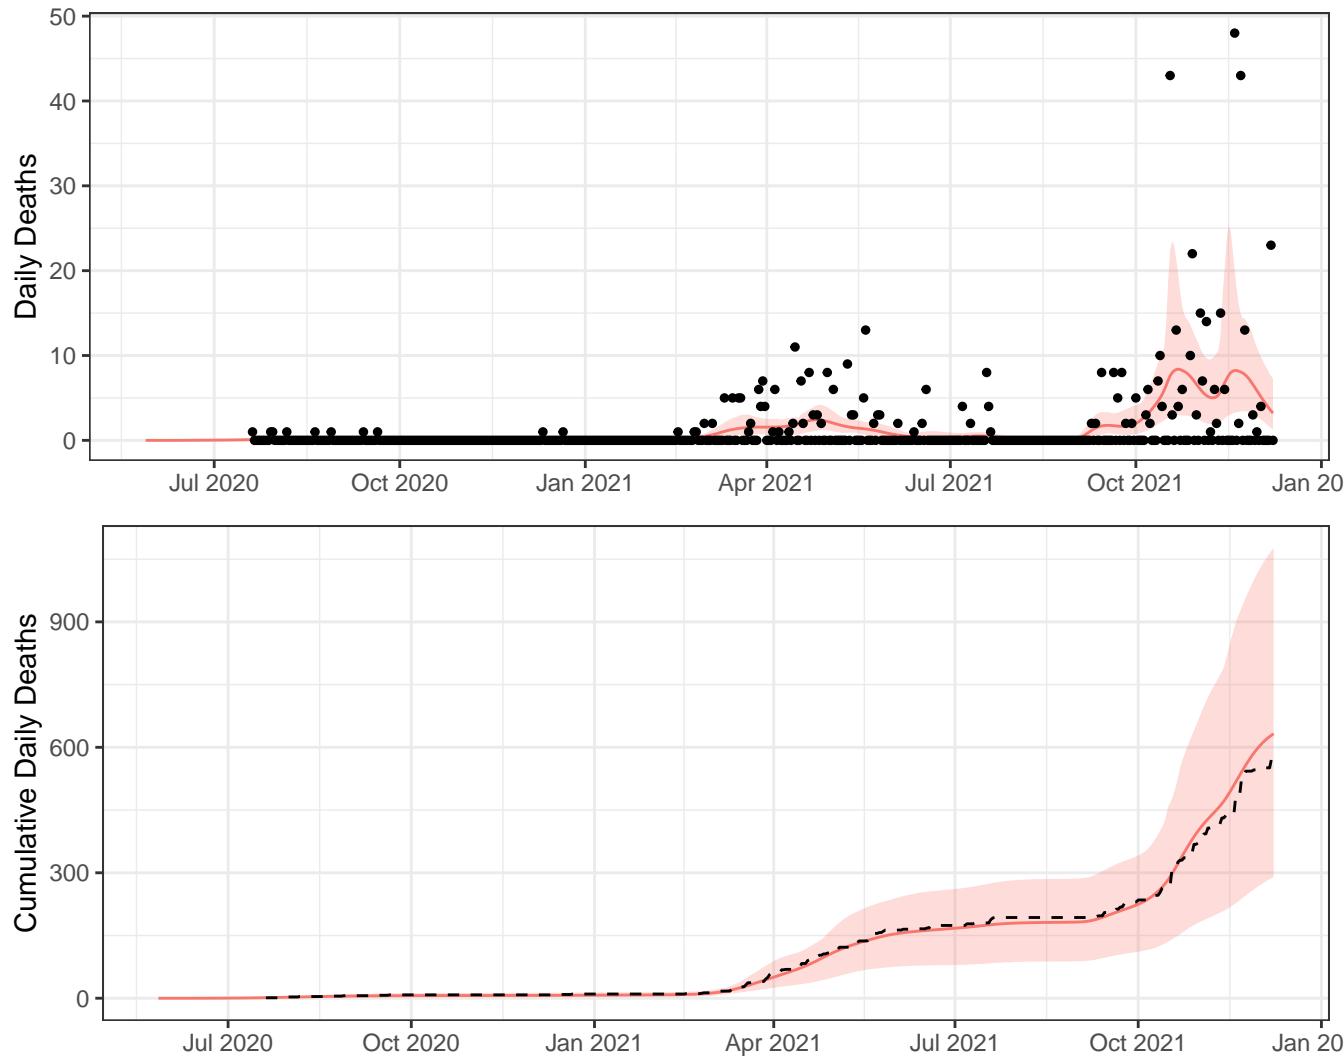

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Philippines

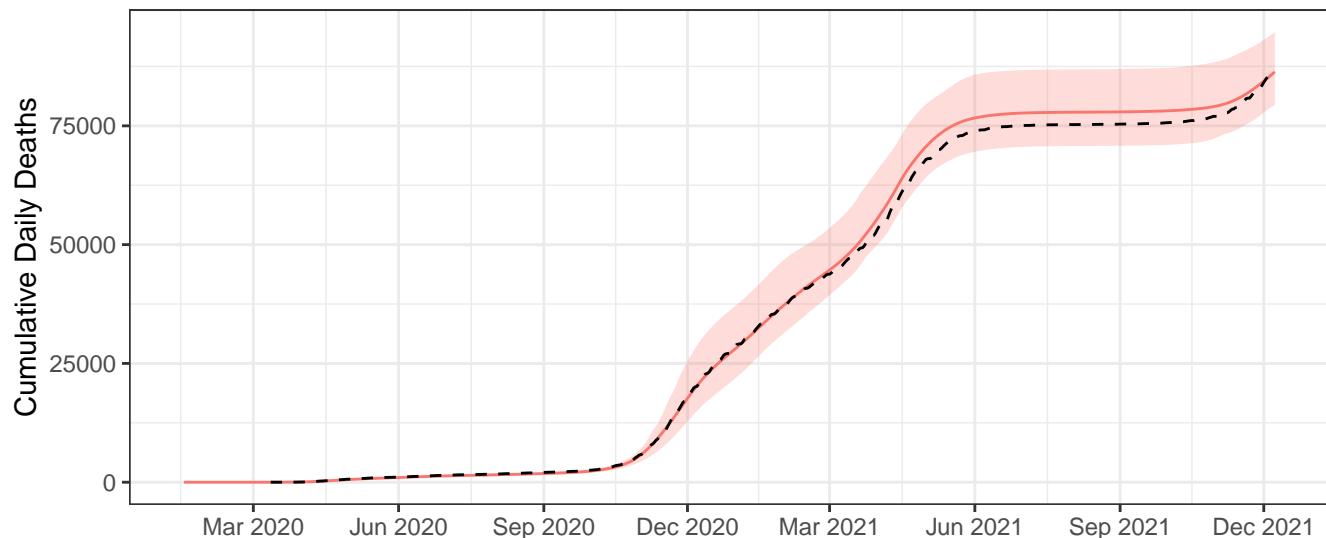

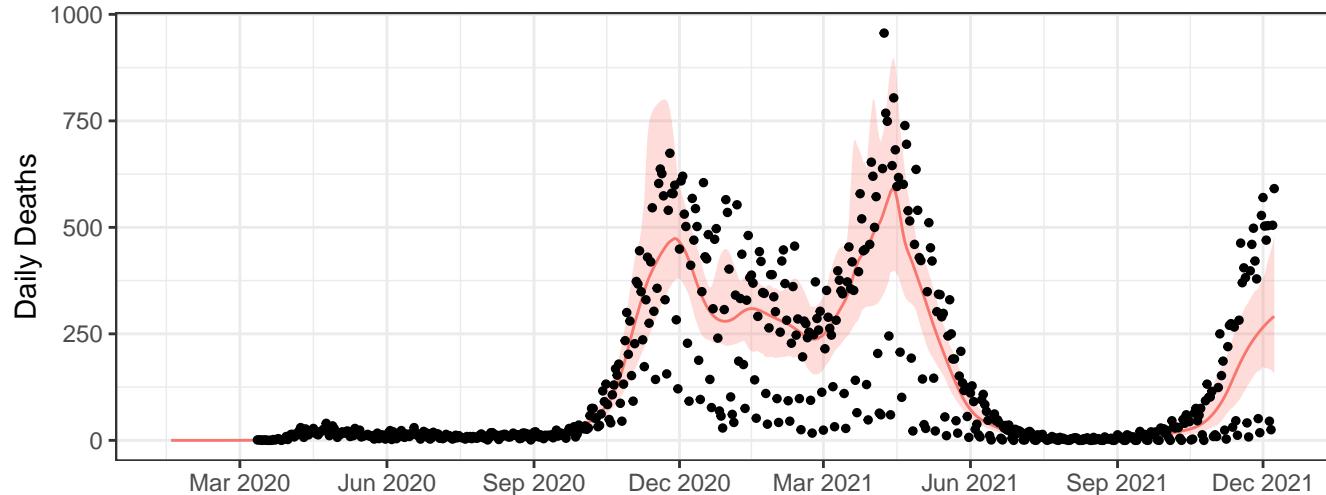

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Papua New Guinea

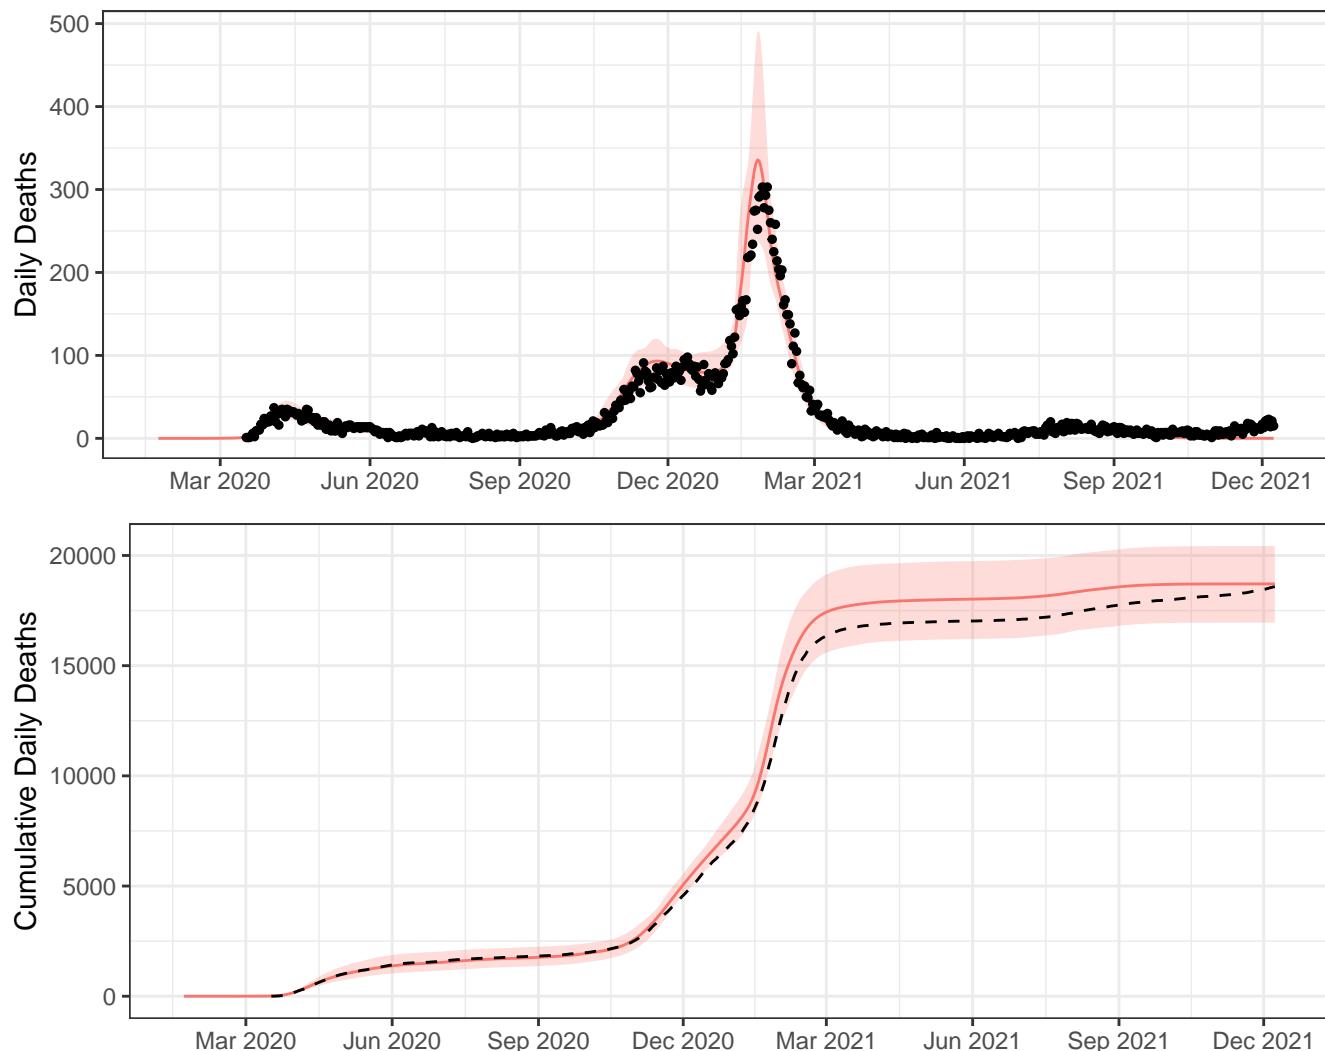

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Poland

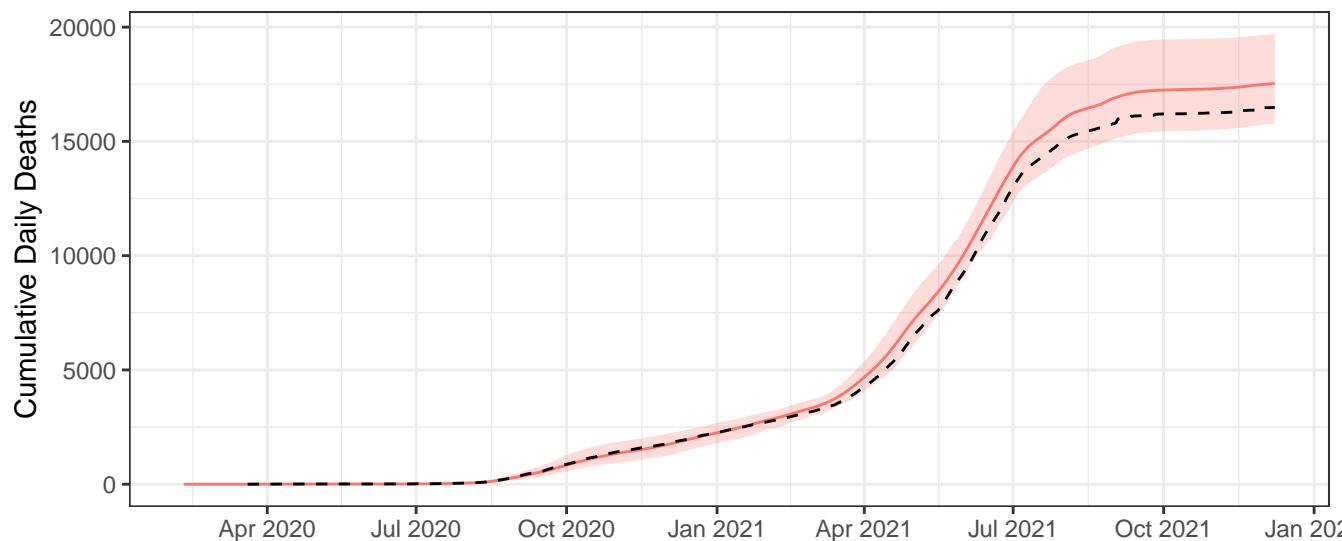

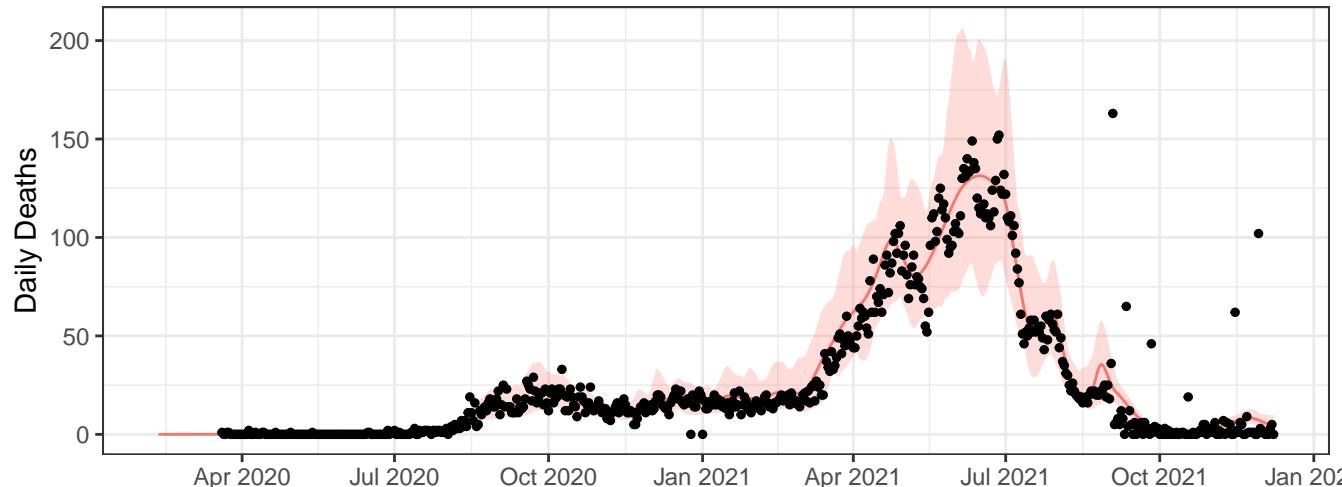

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Portugal

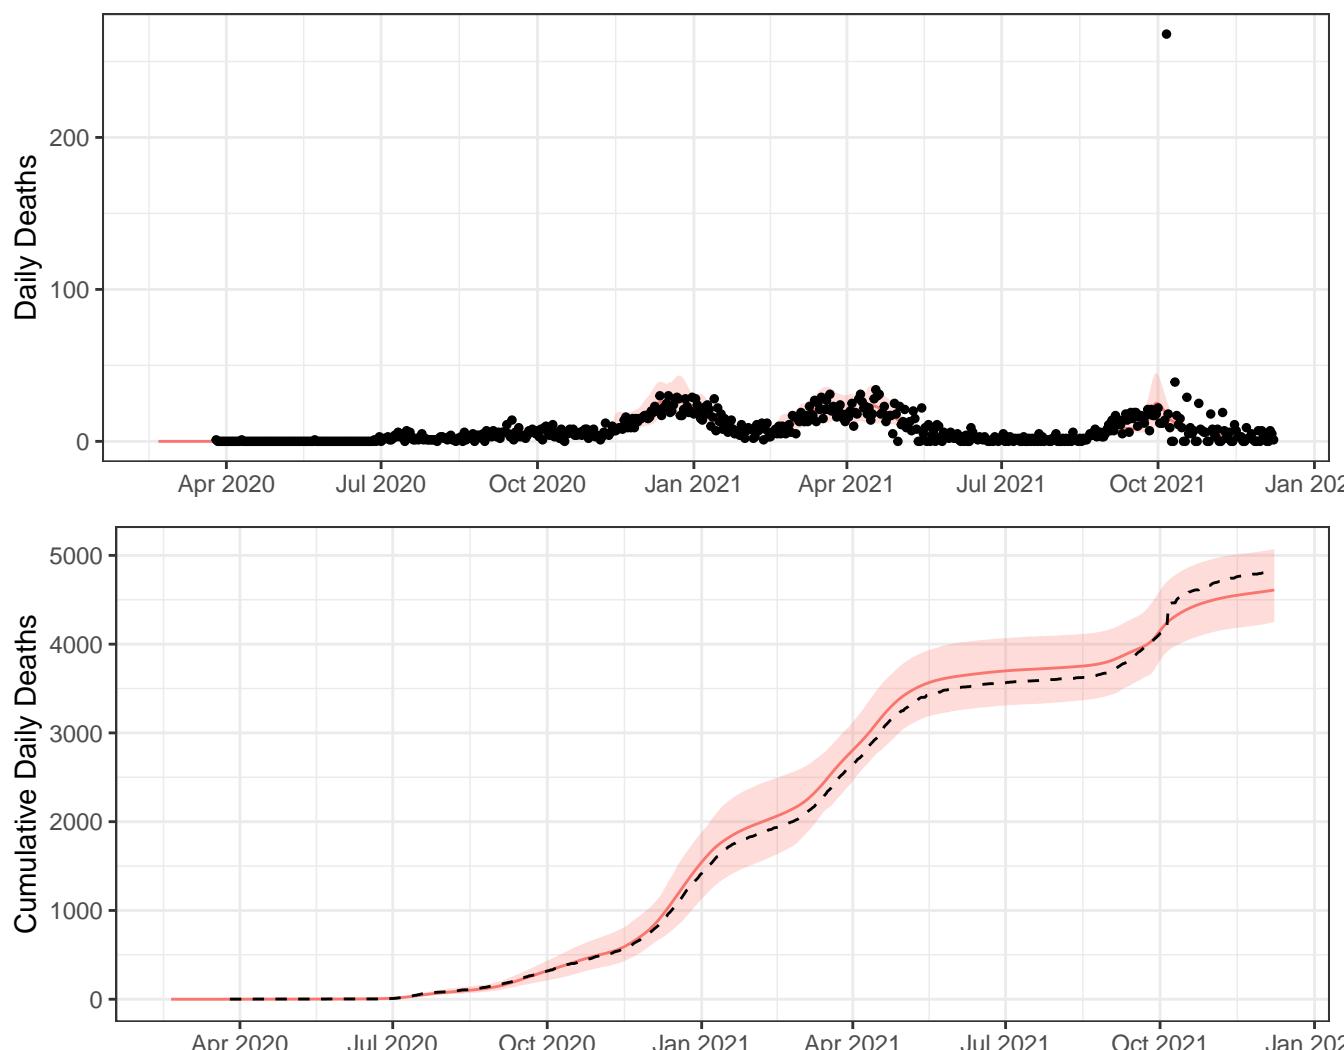

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Paraguay

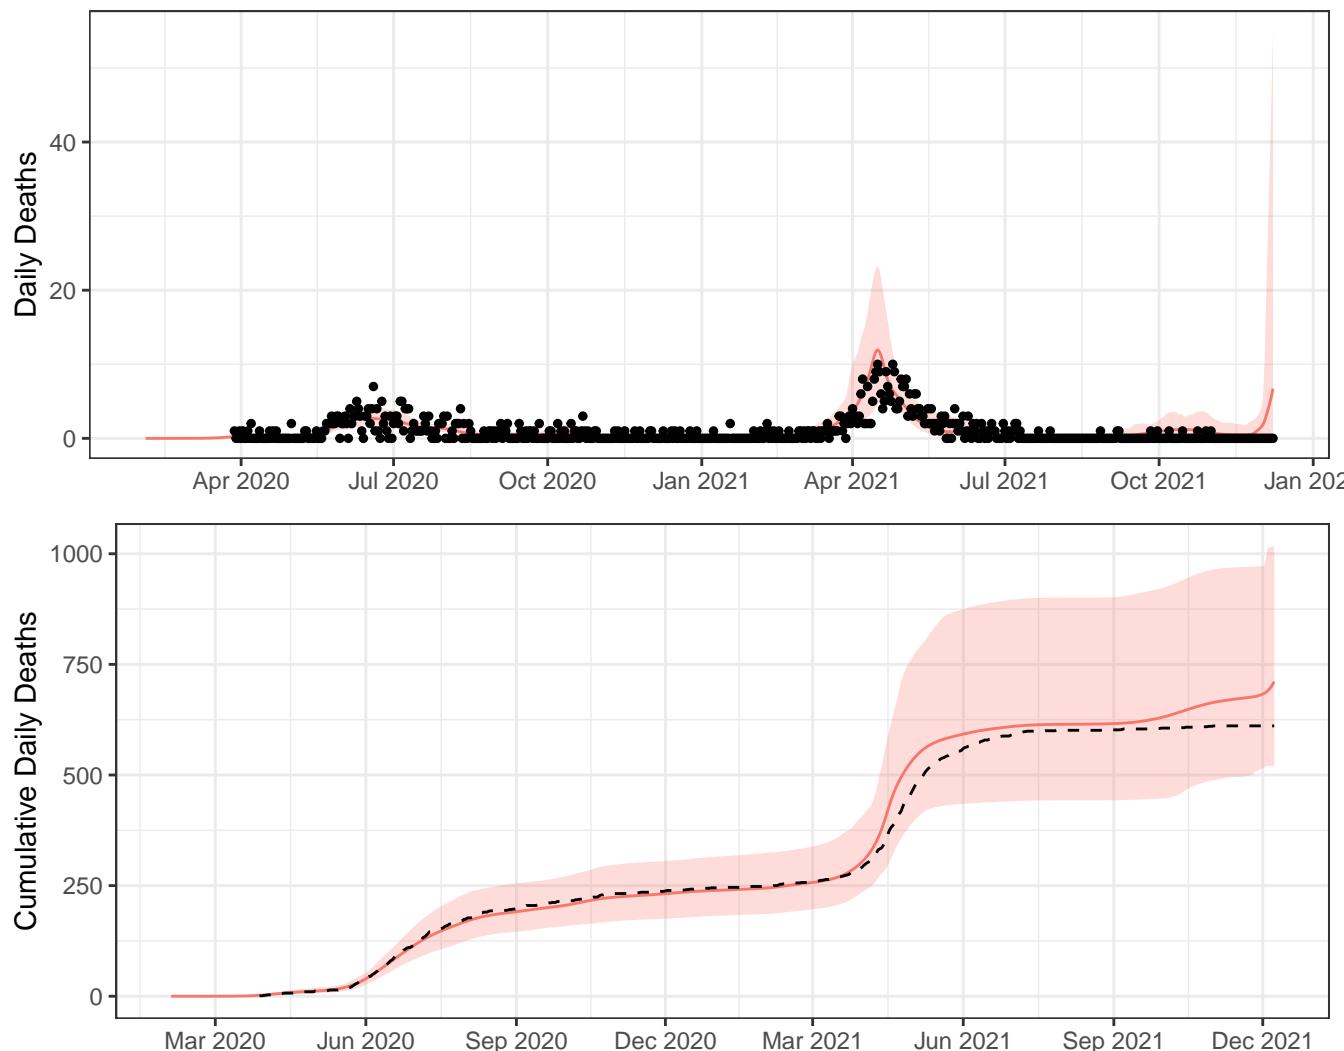

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# State of Palestine

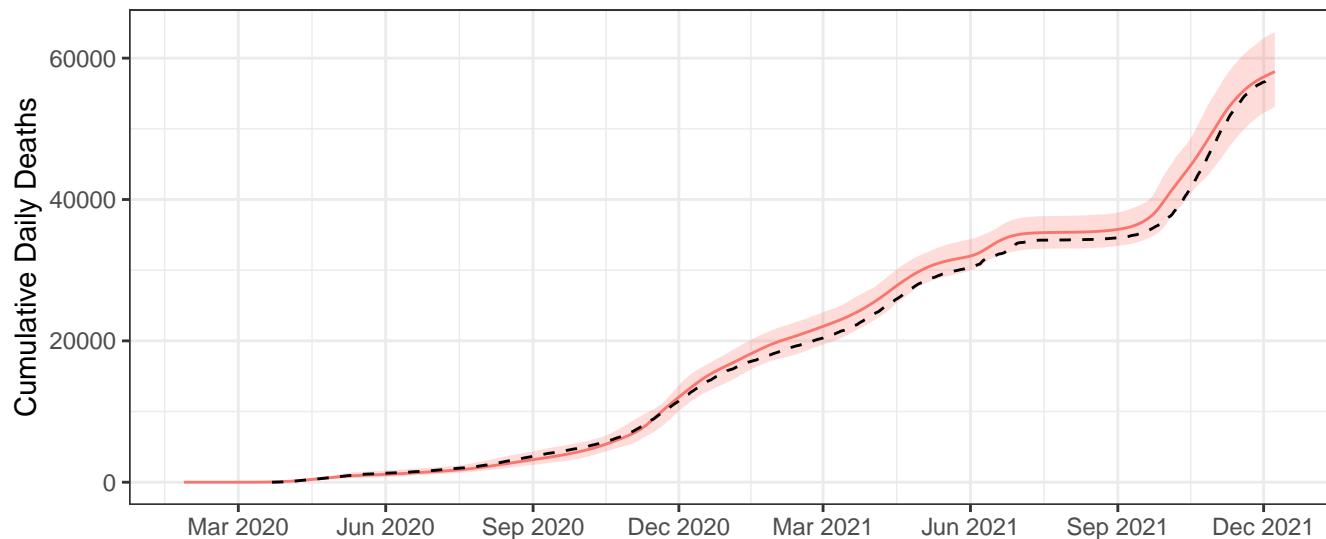

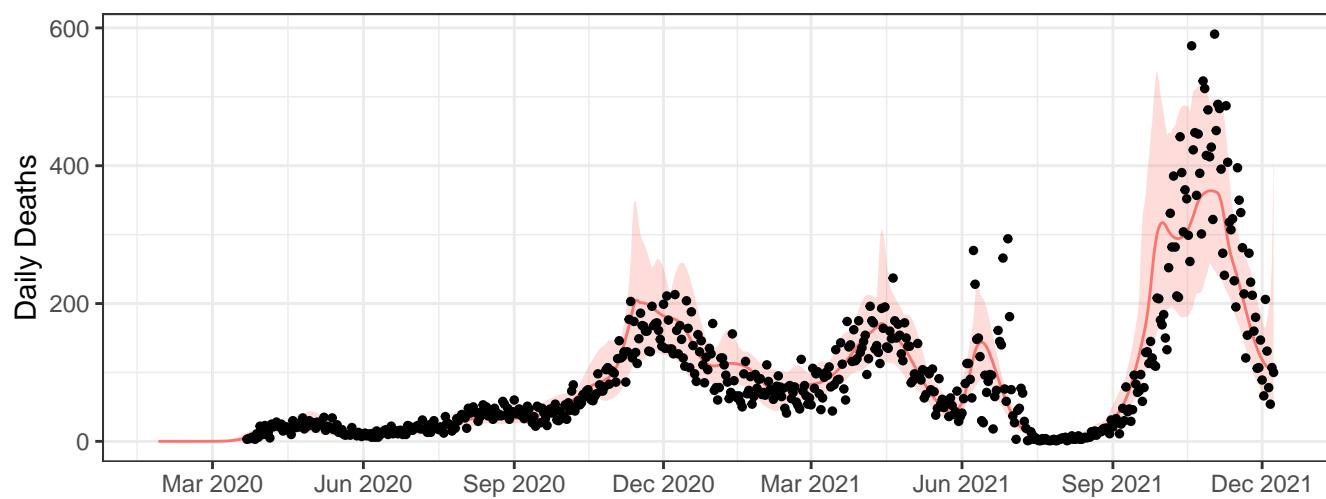

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Qatar

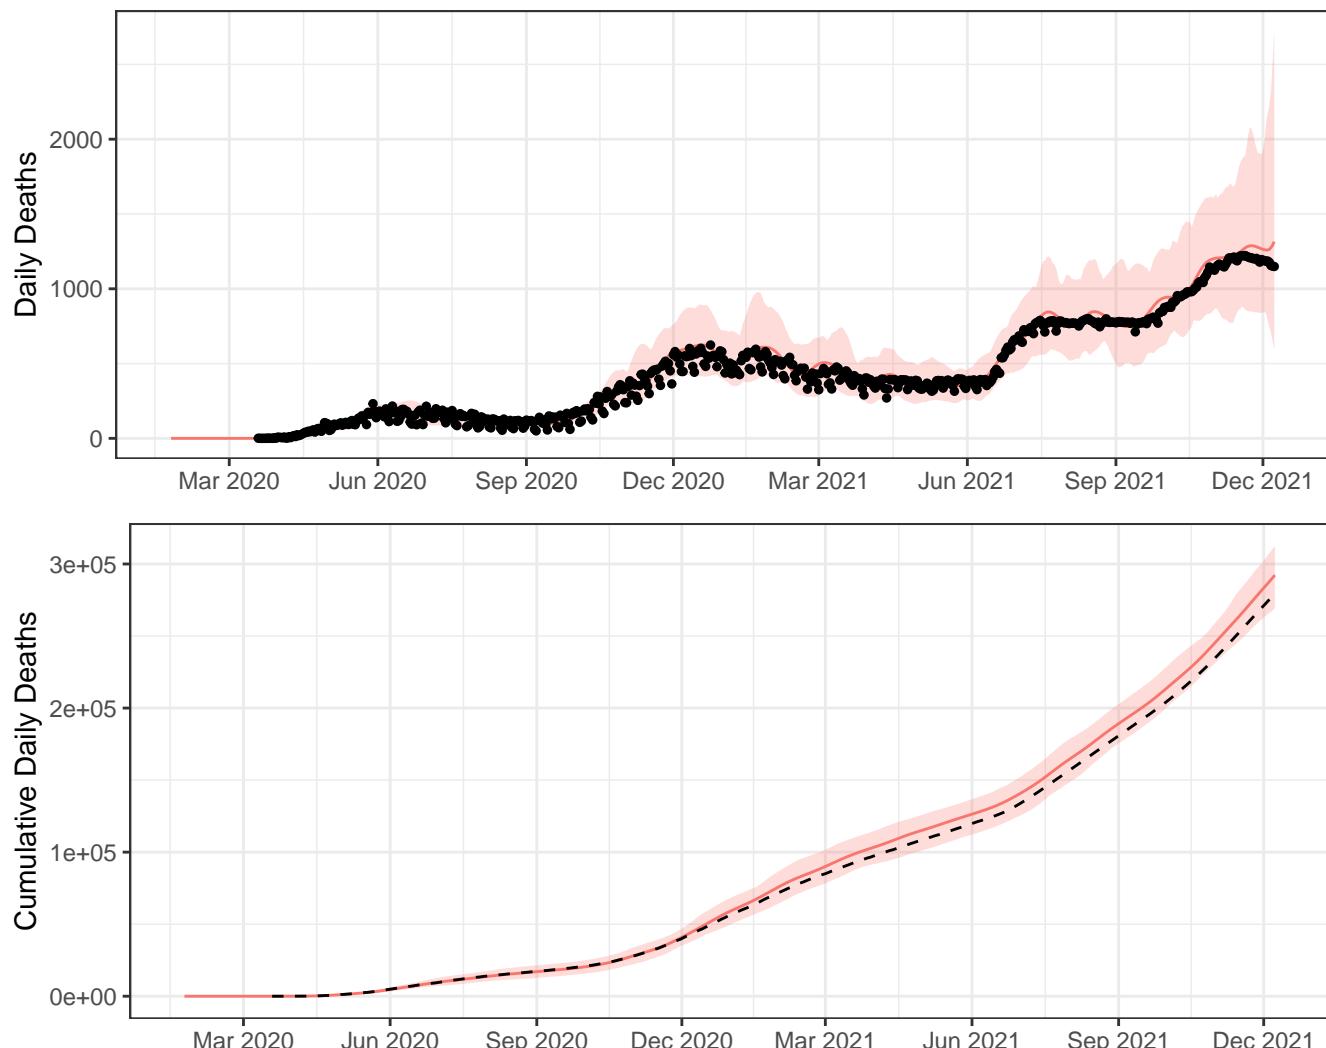

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Romania

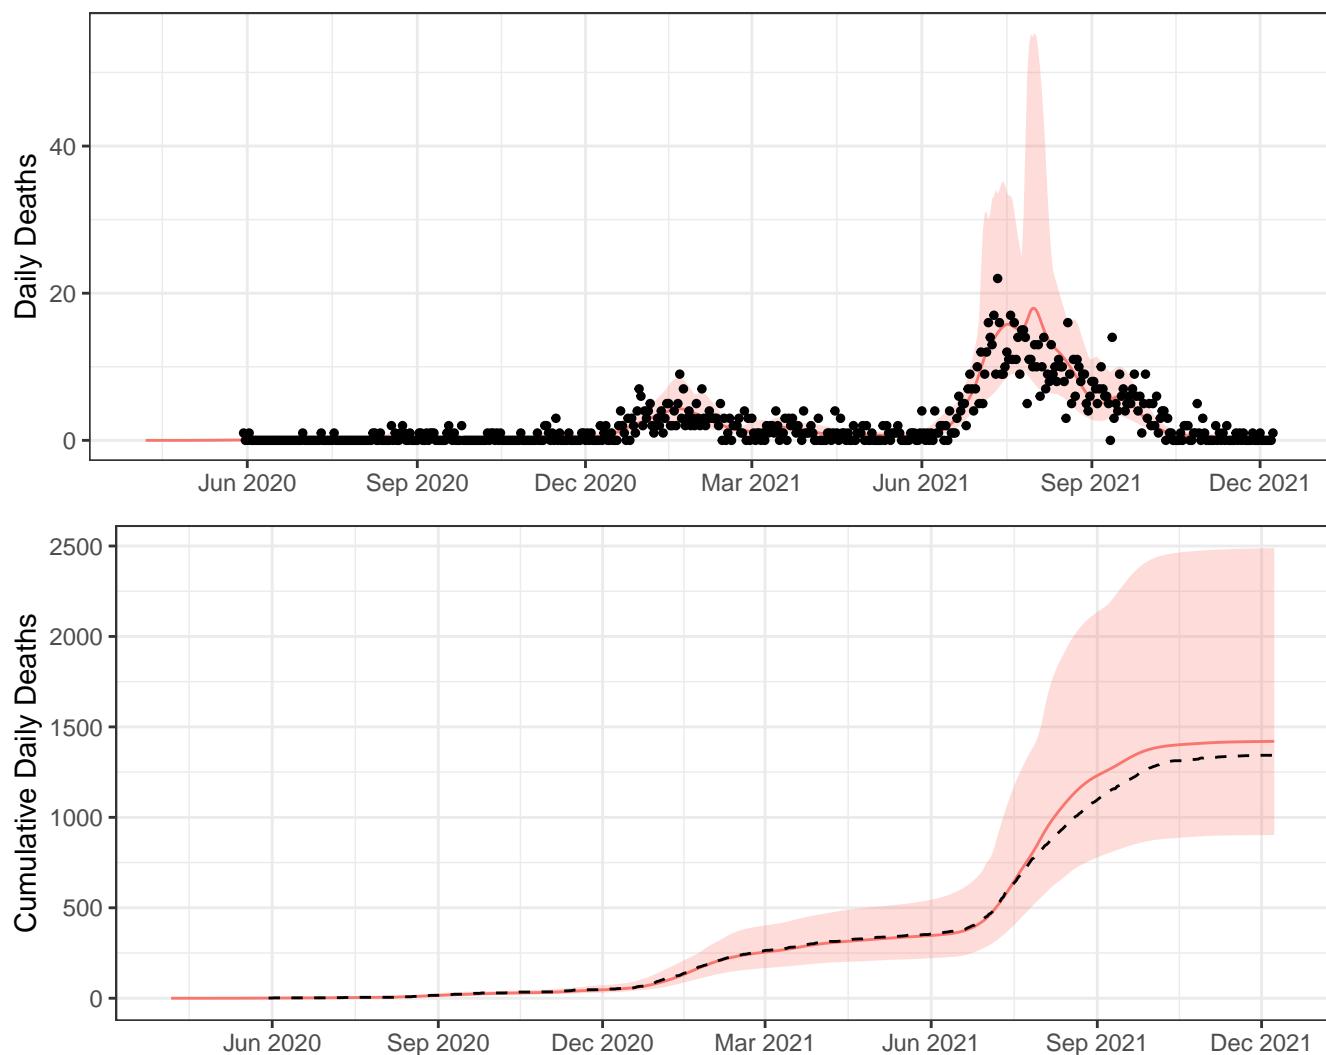

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Russia

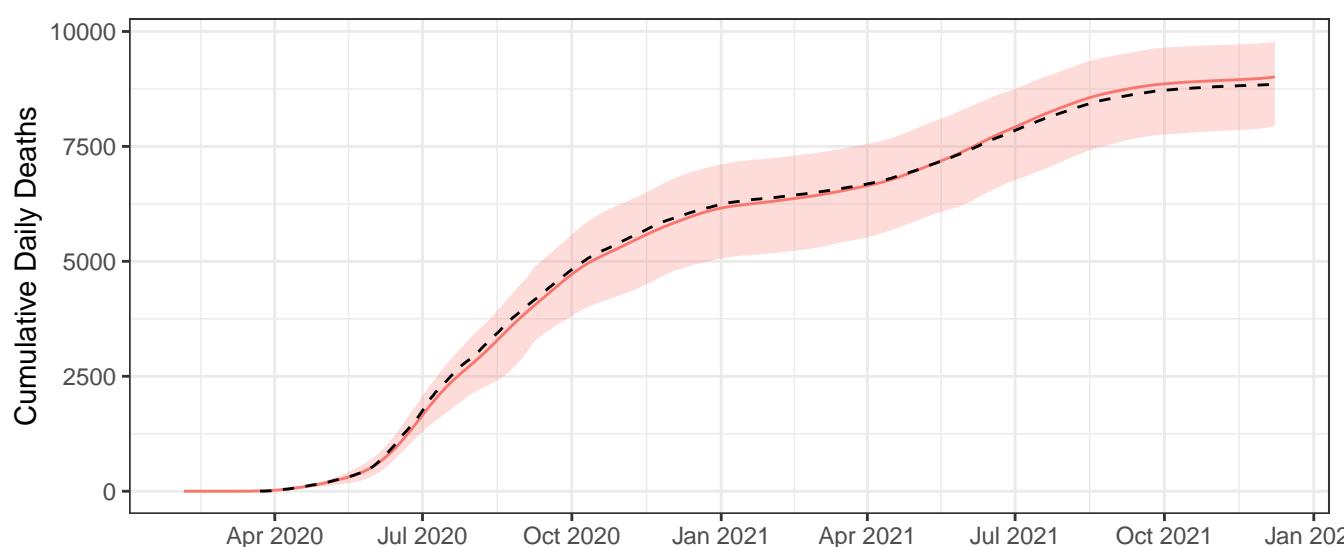

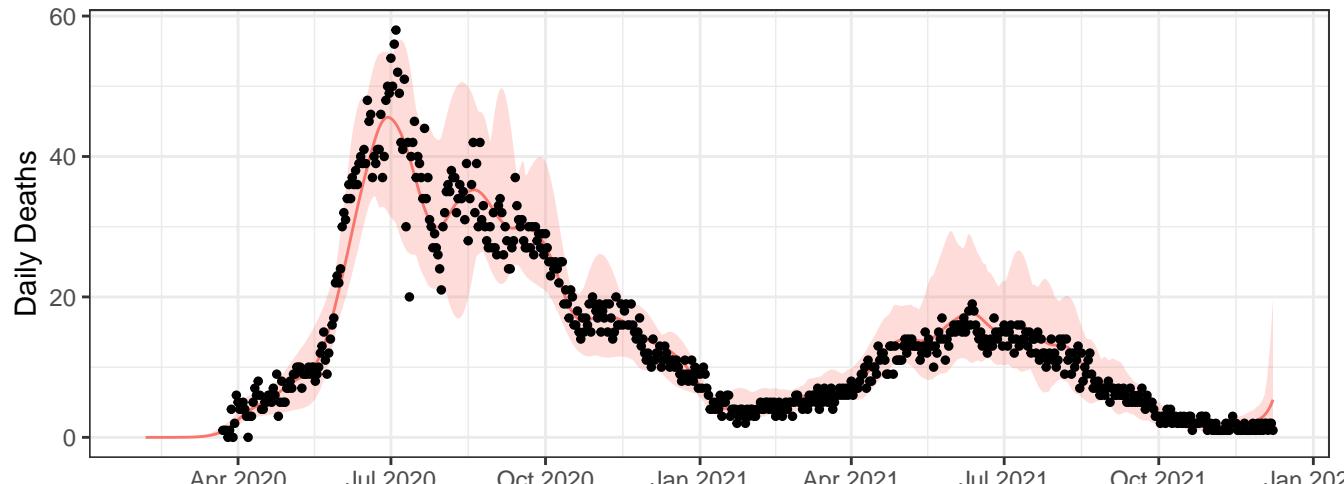

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Rwanda

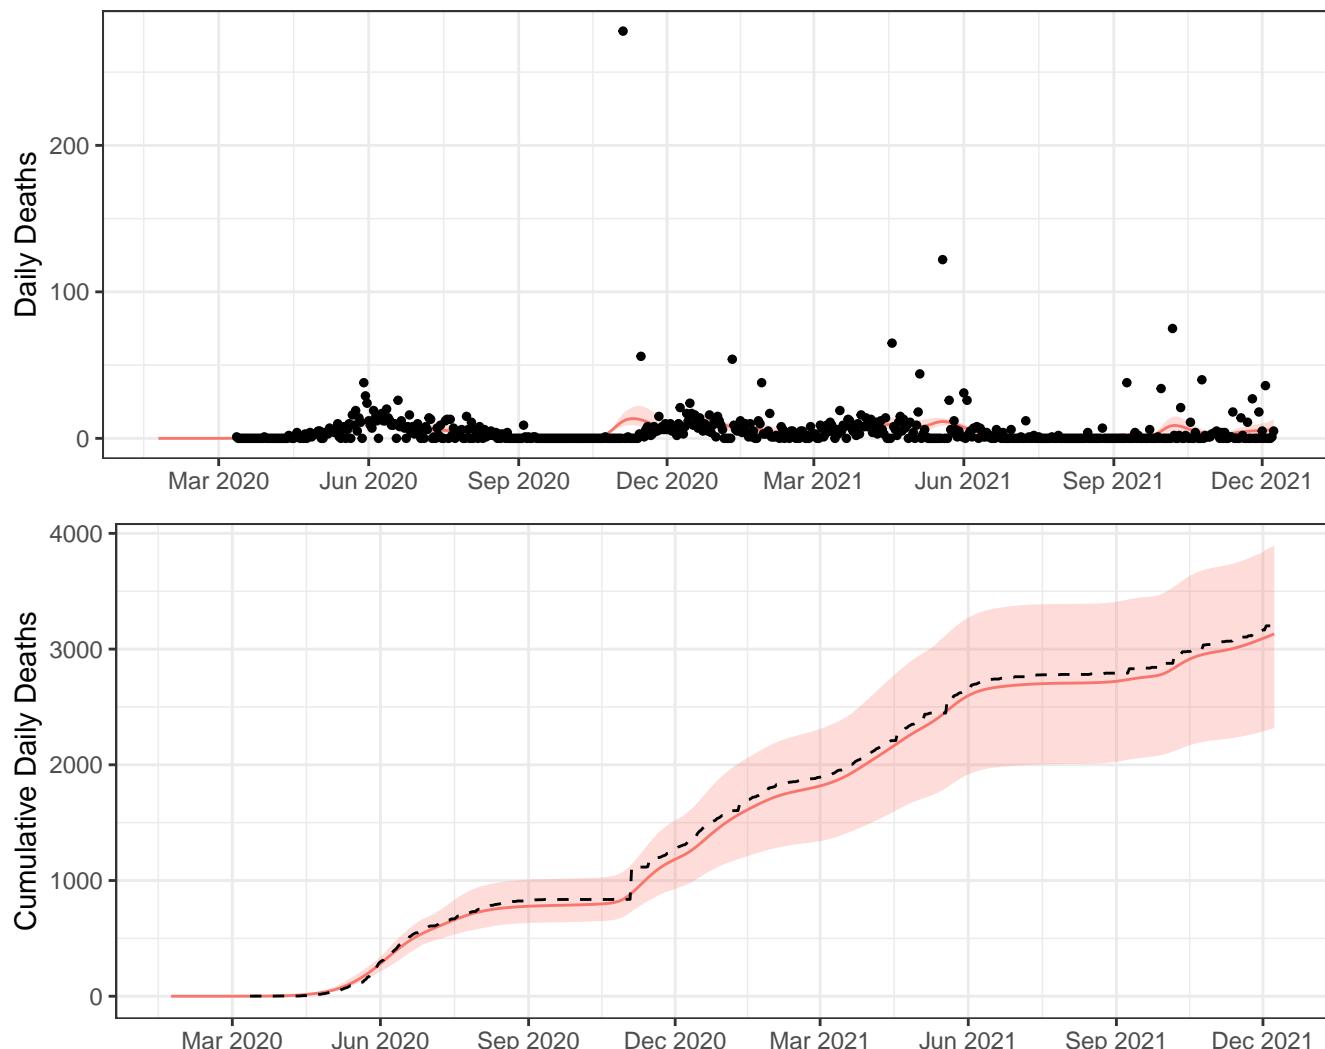

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Saudi Arabia

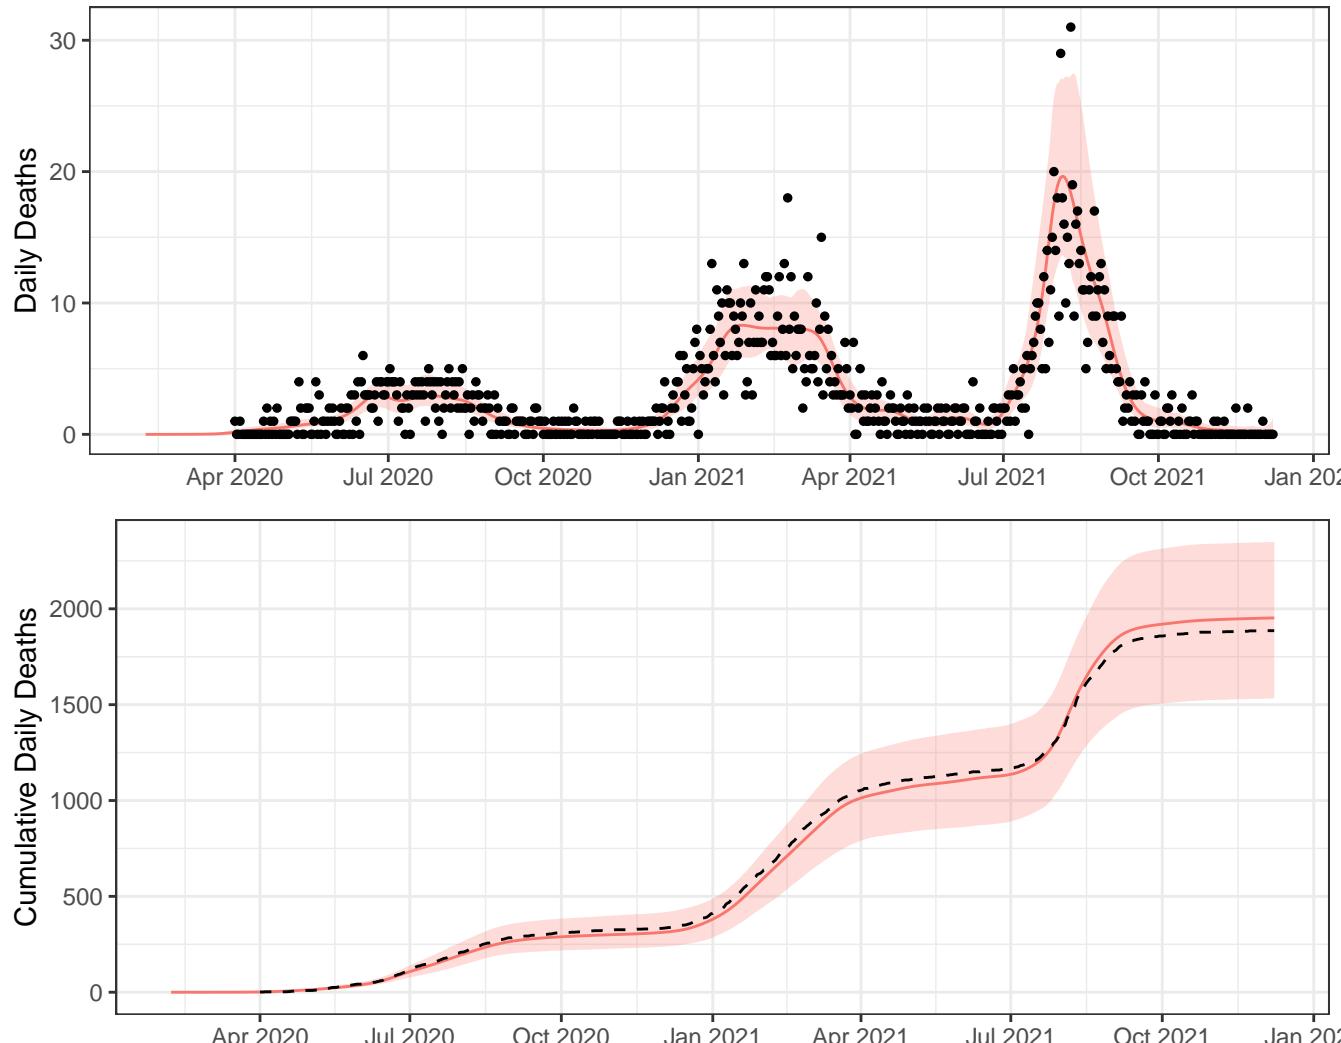

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Sudan

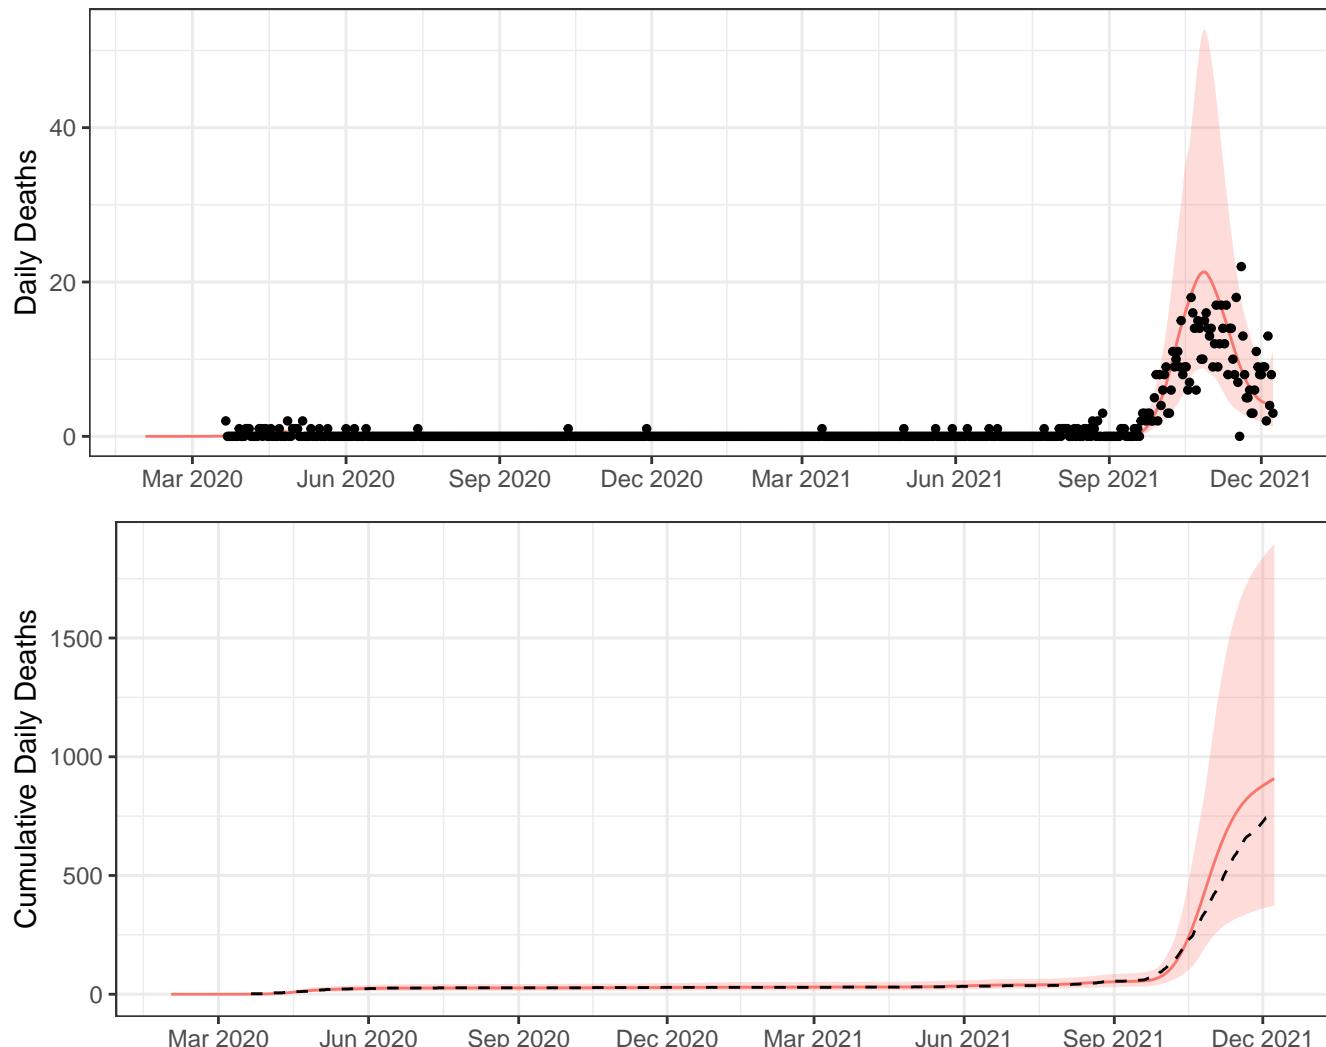

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Senegal

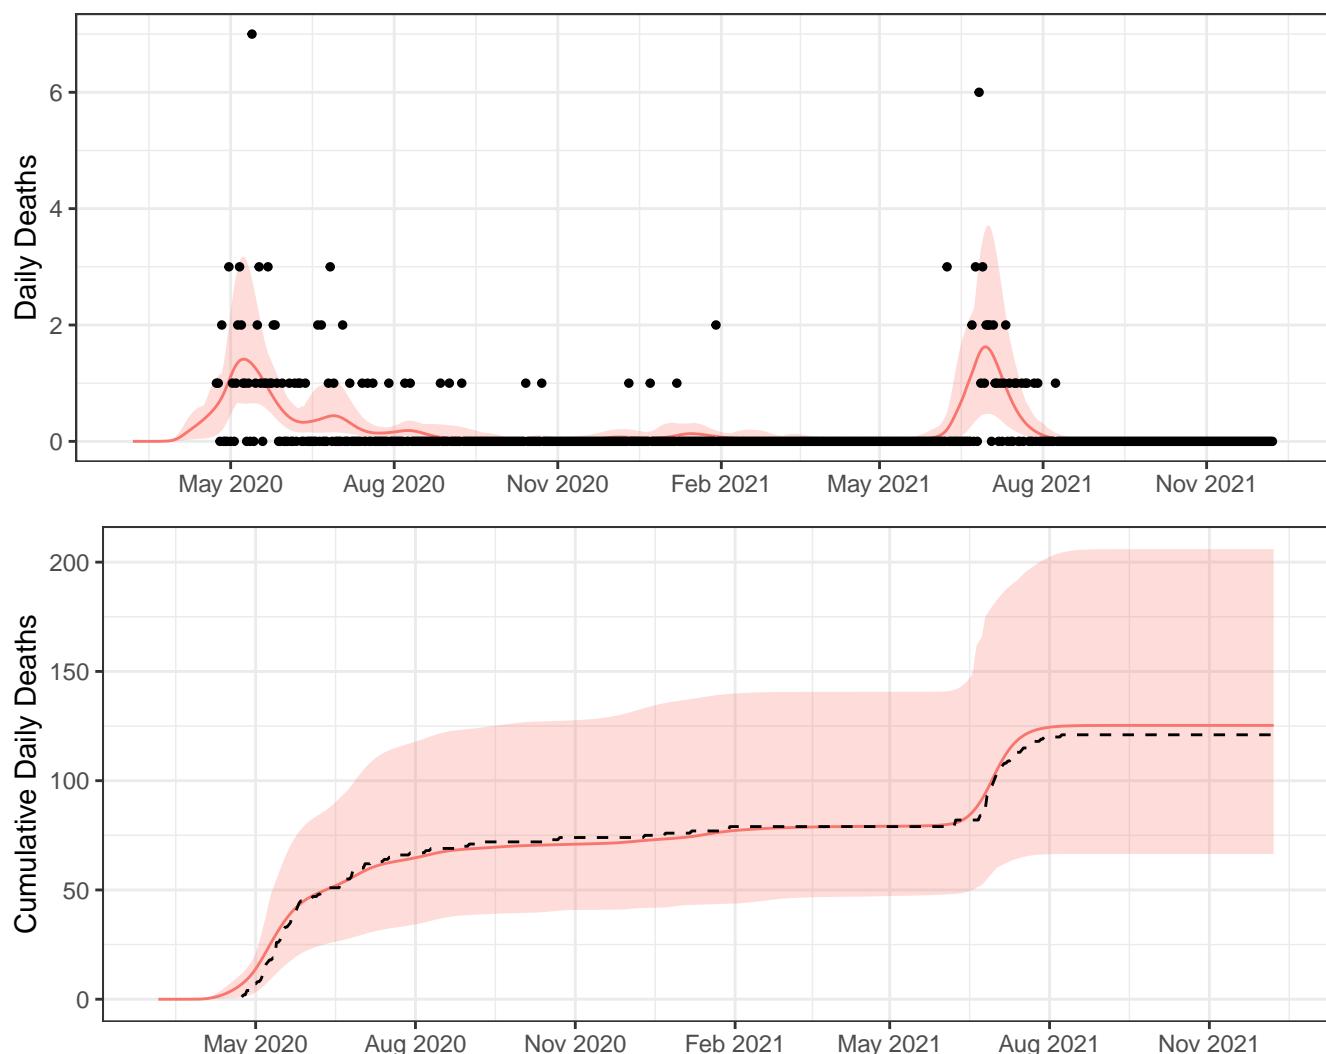

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Singapore

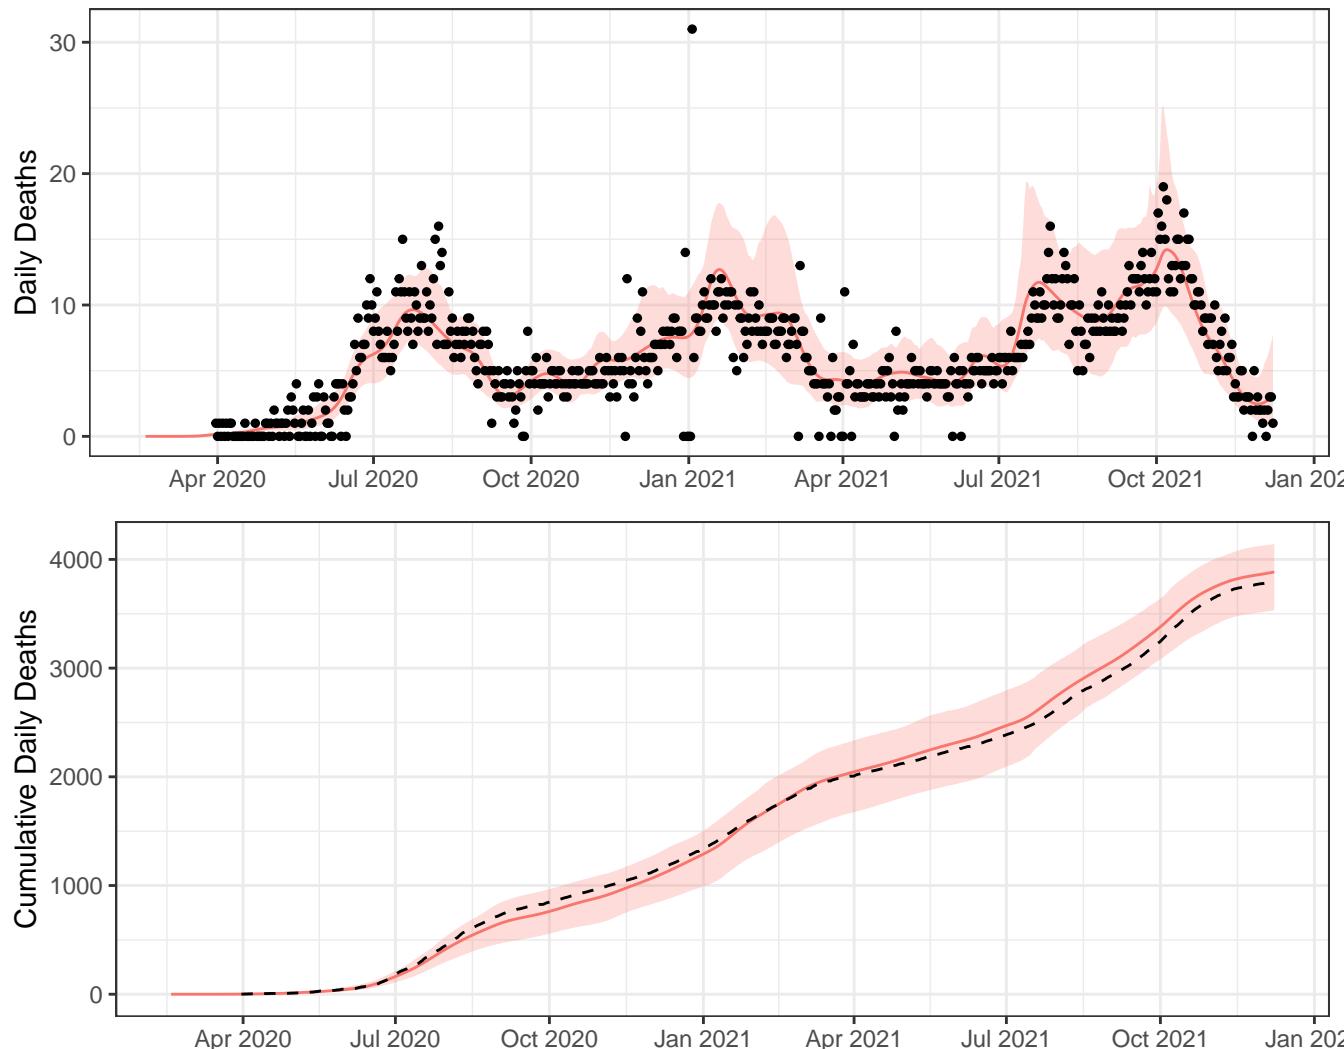

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Sierra Leone

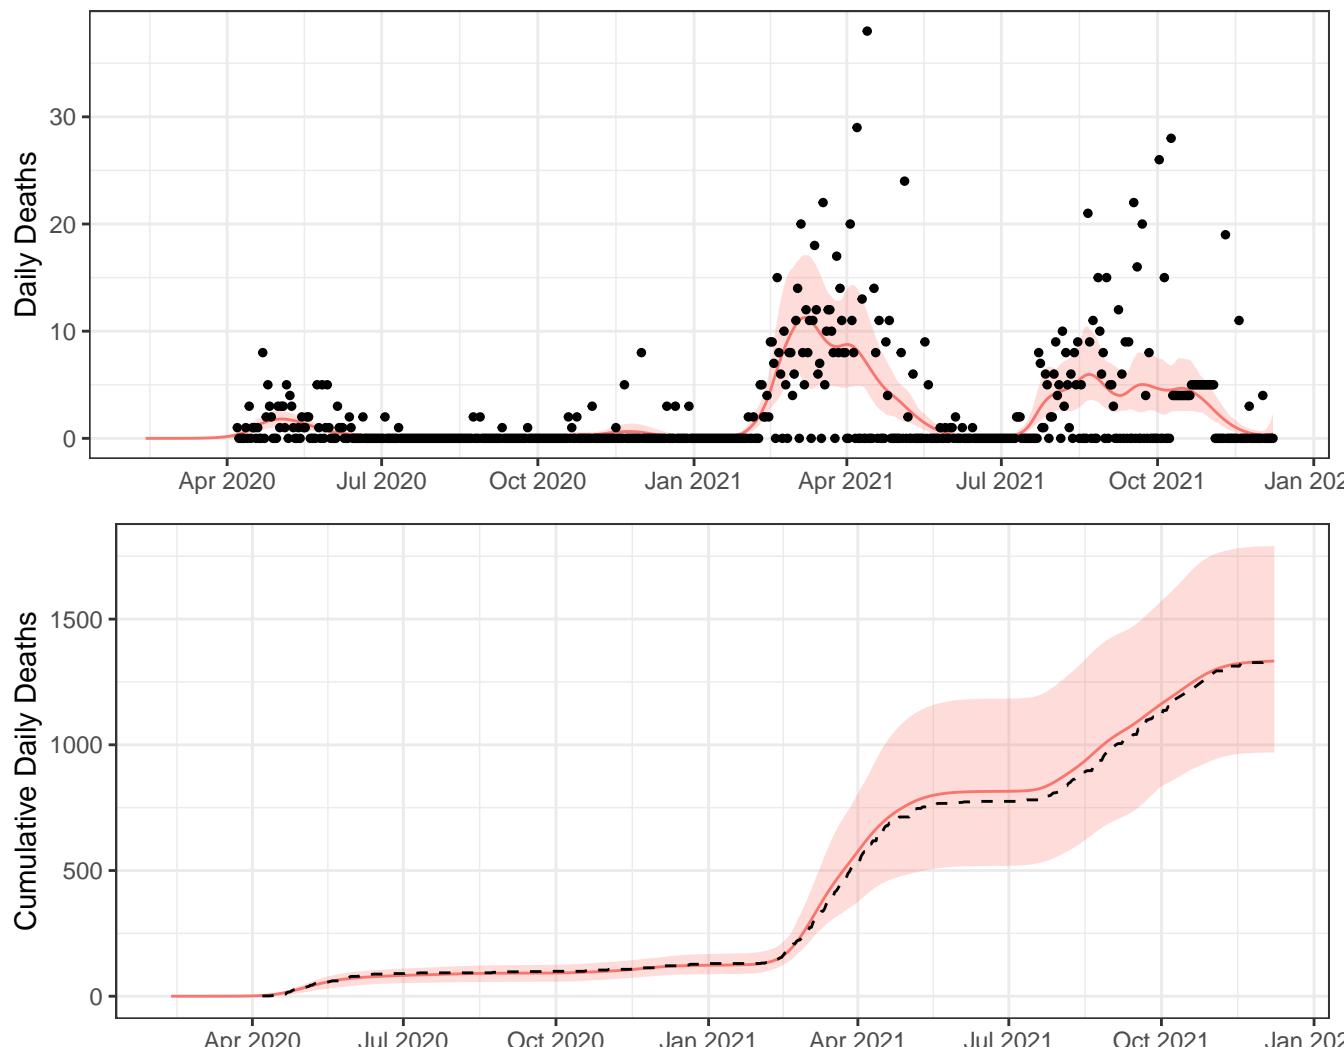

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# El Salvador

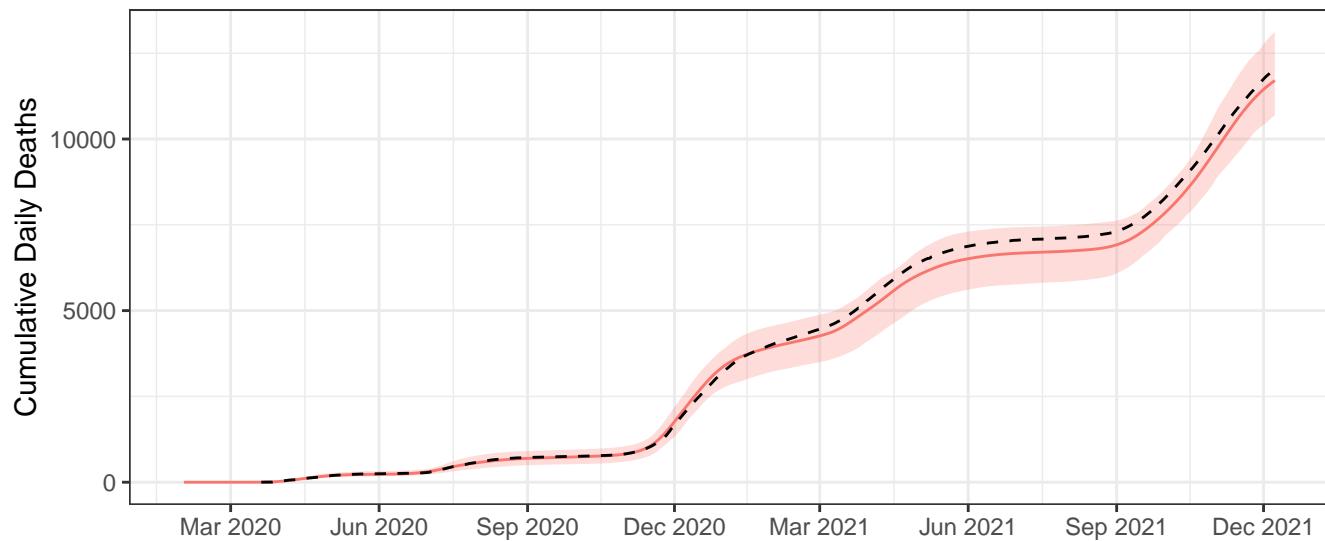

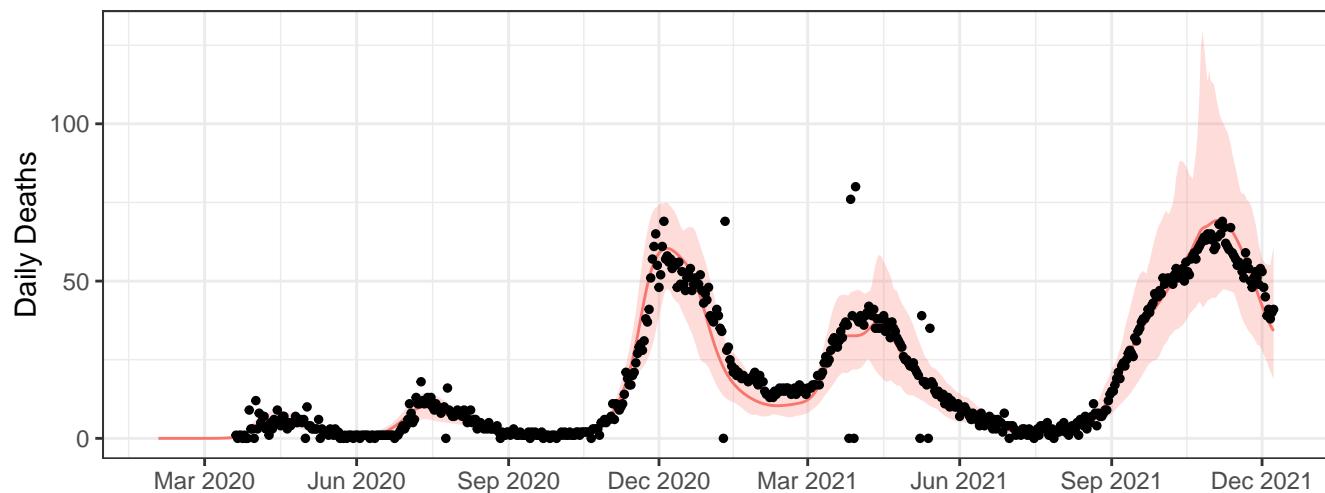

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Somalia

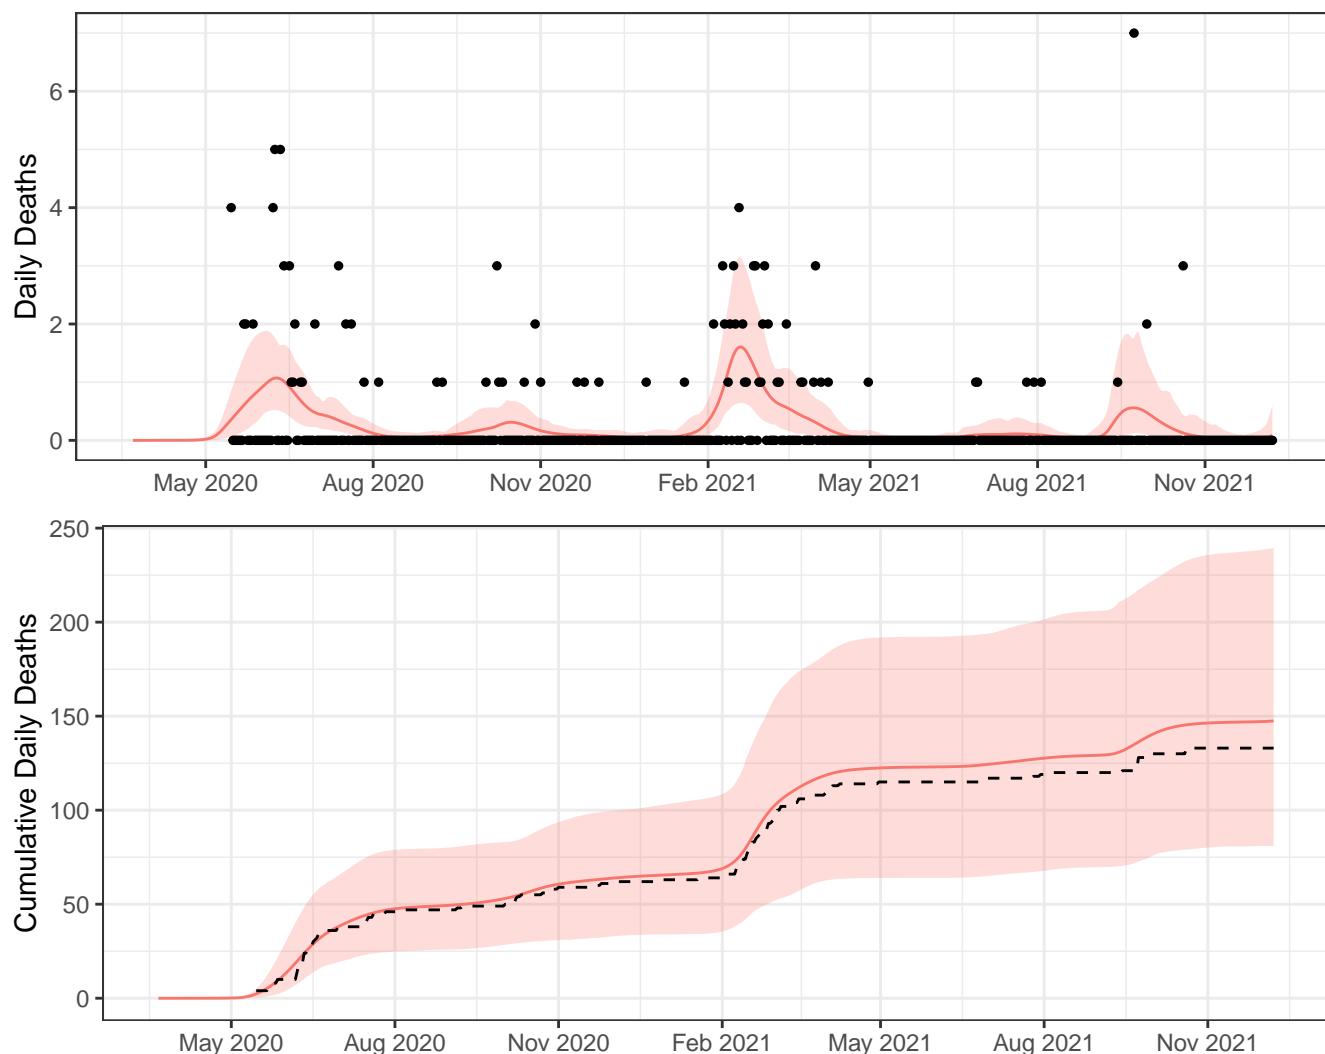

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Serbia

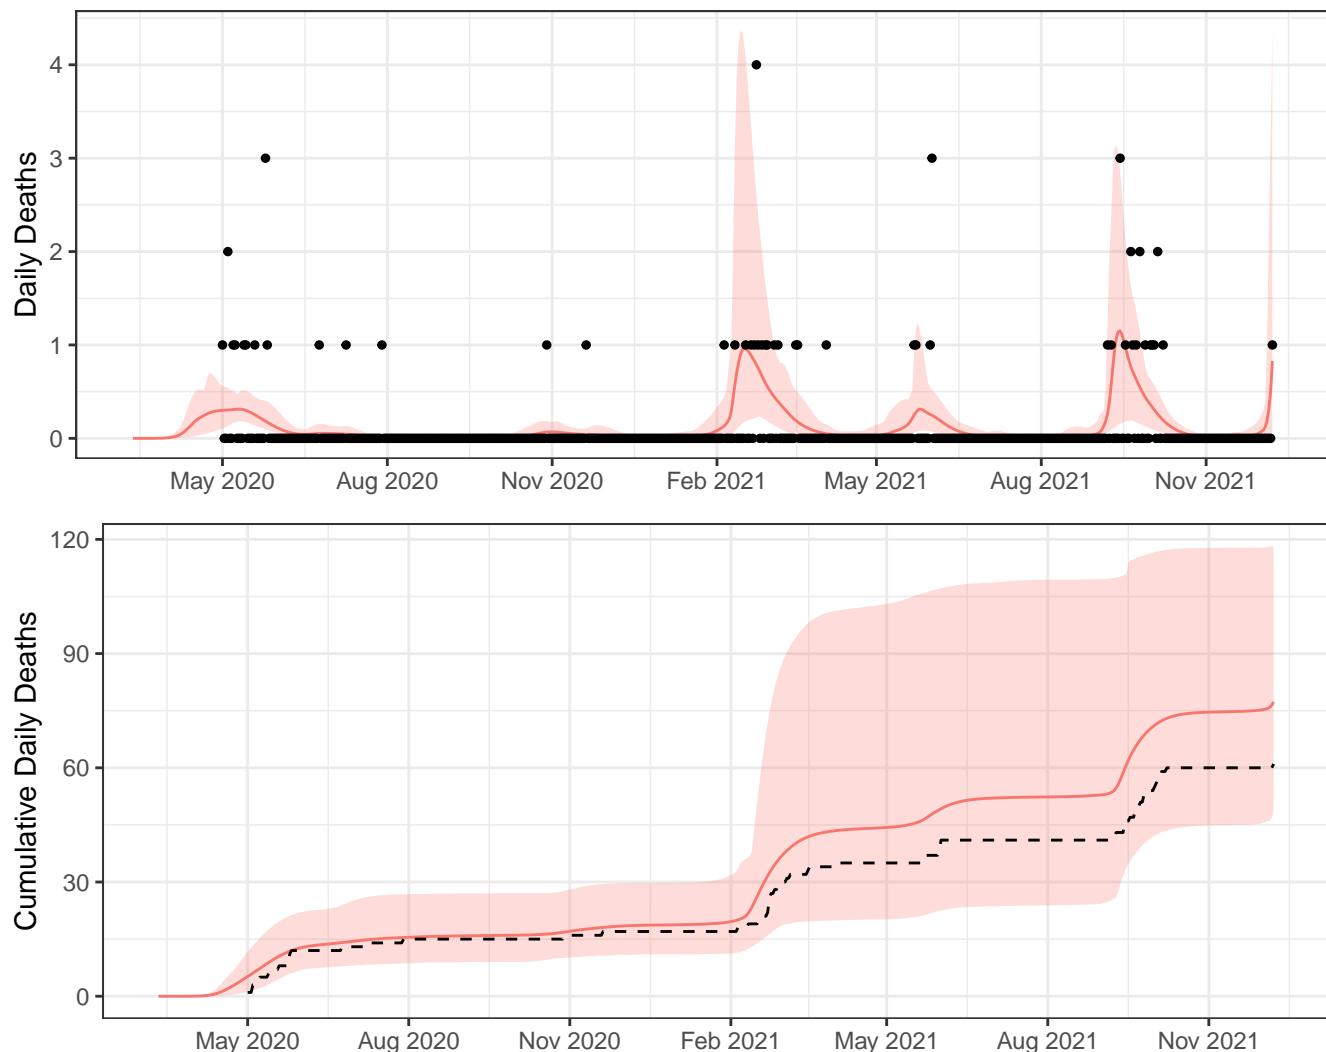

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# South Sudan

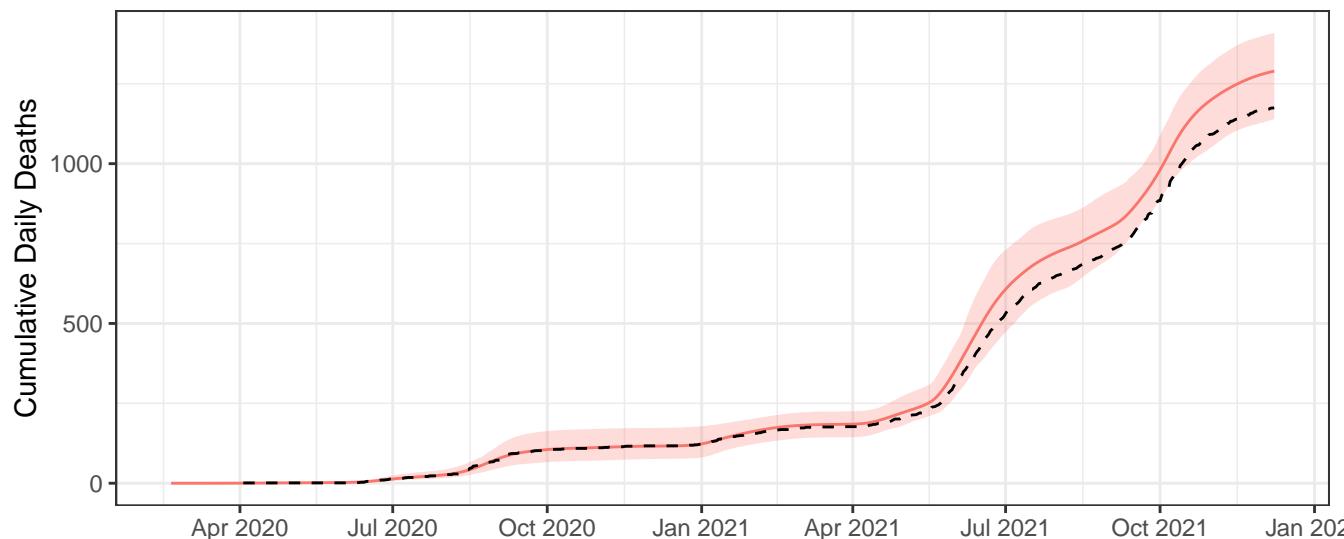

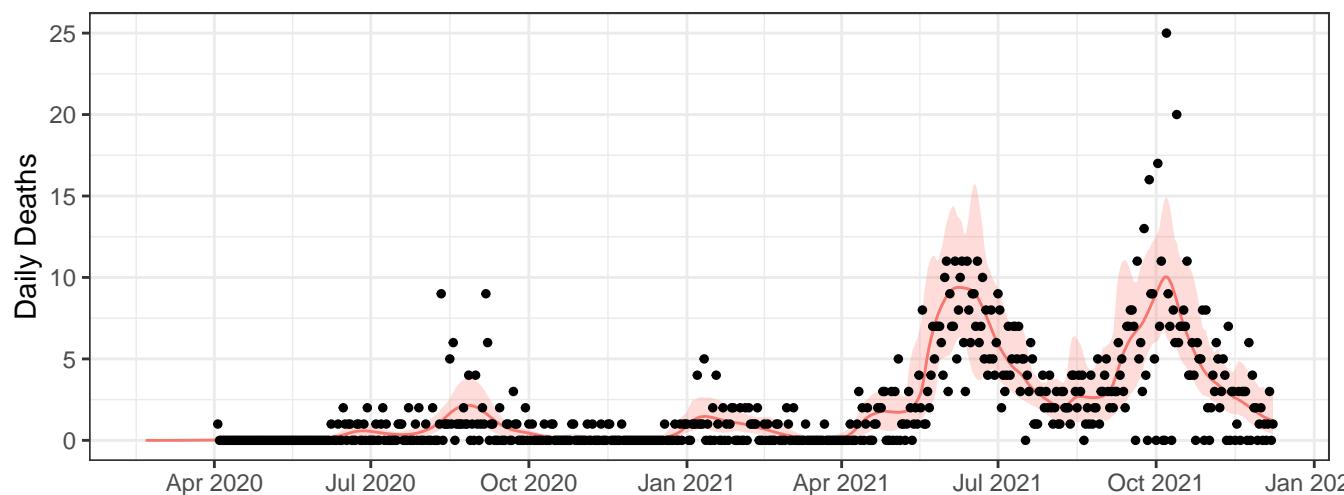

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Sao Tome and Principe

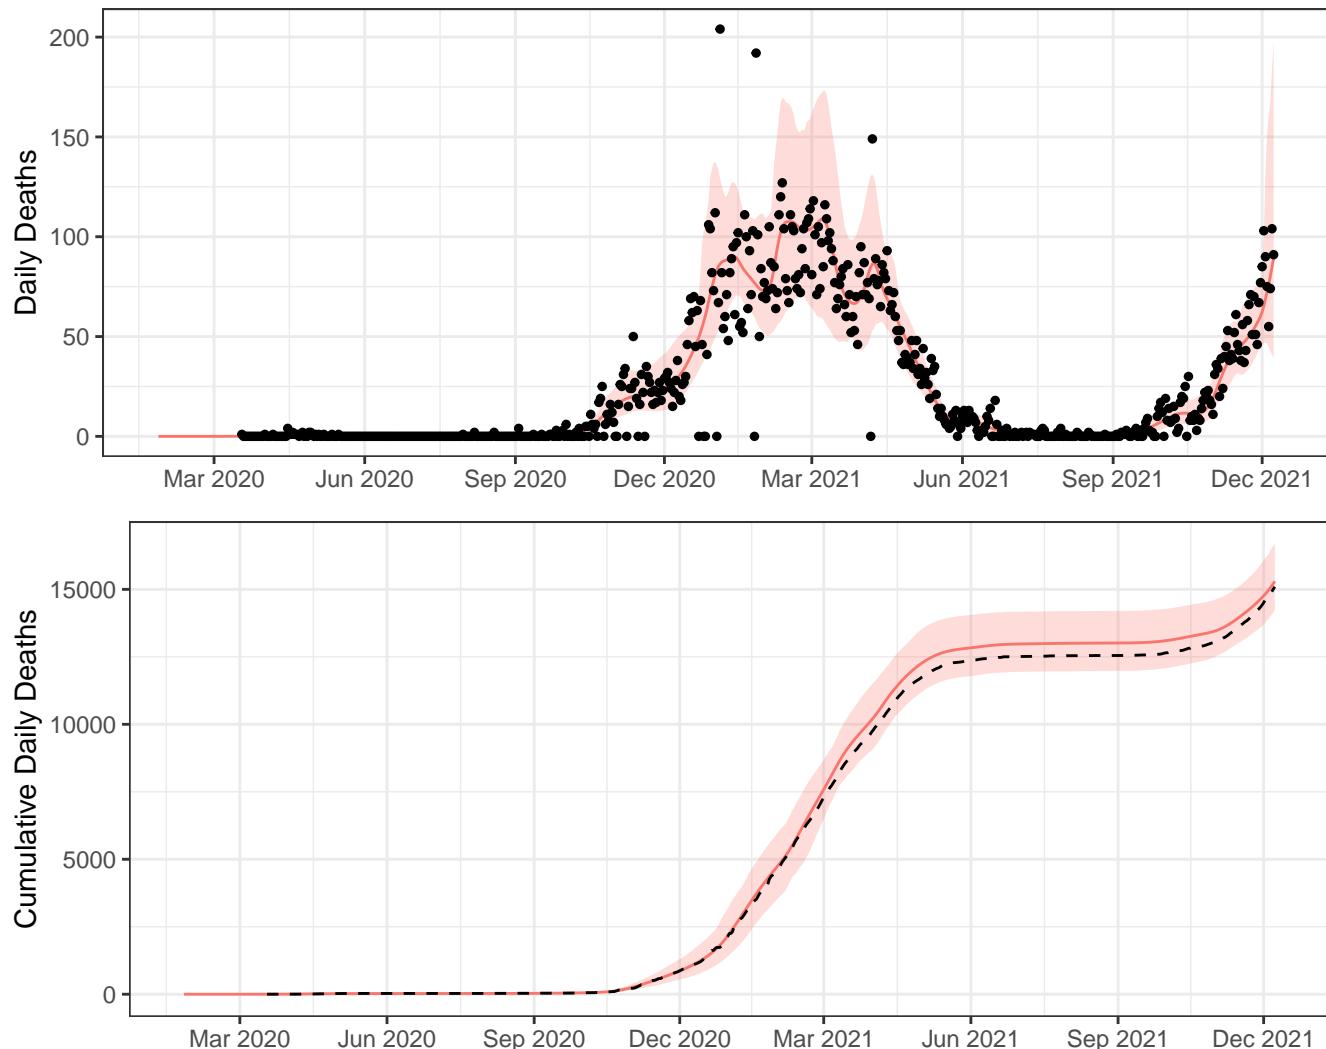

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Suriname

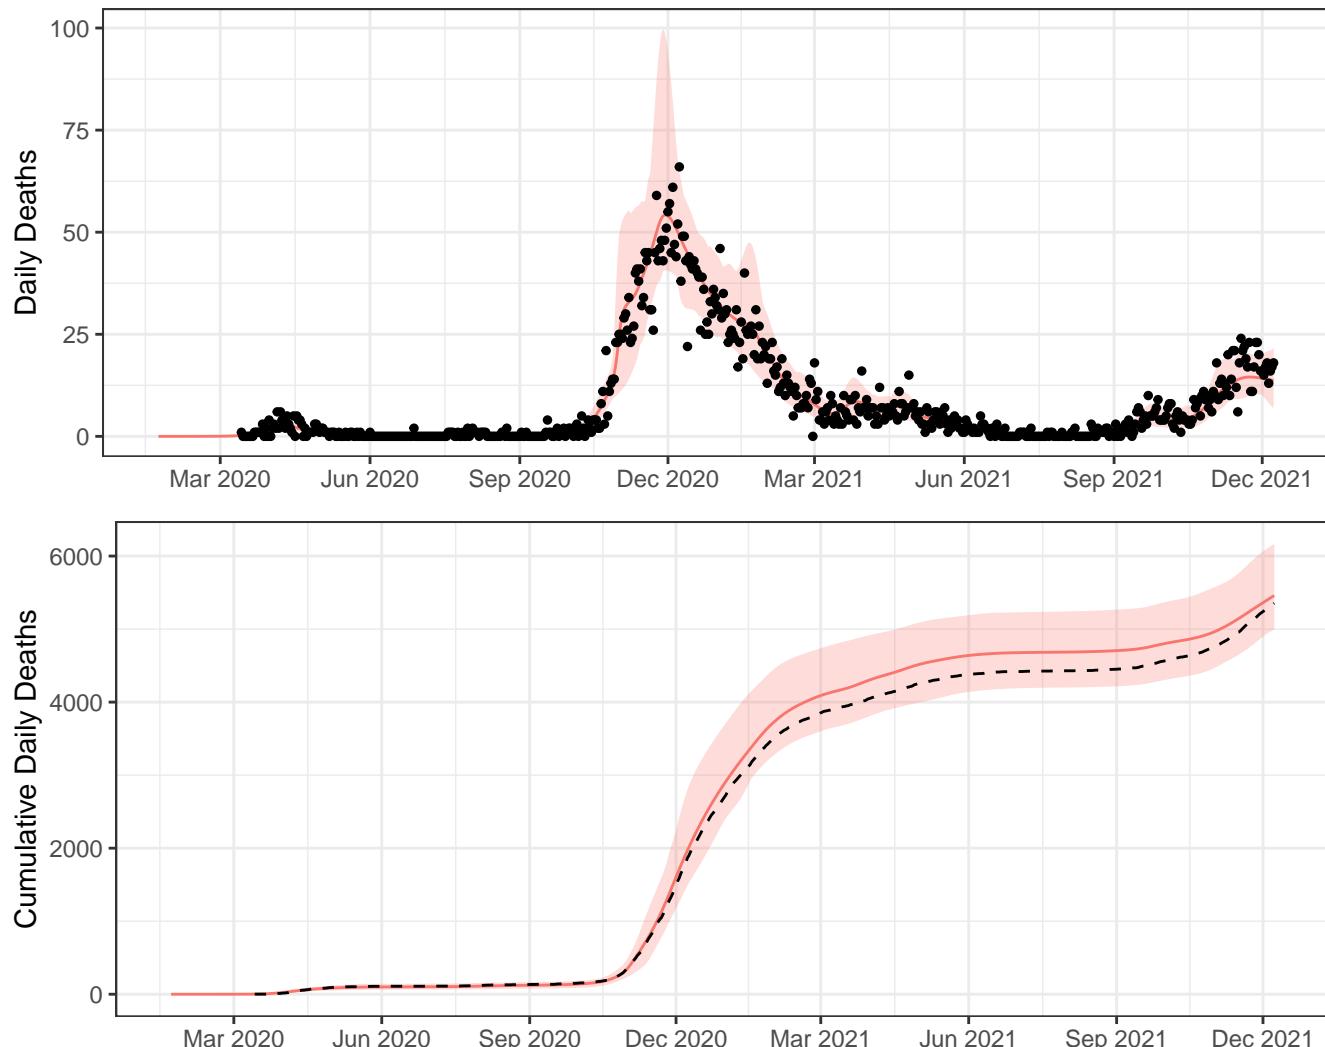

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Slovakia

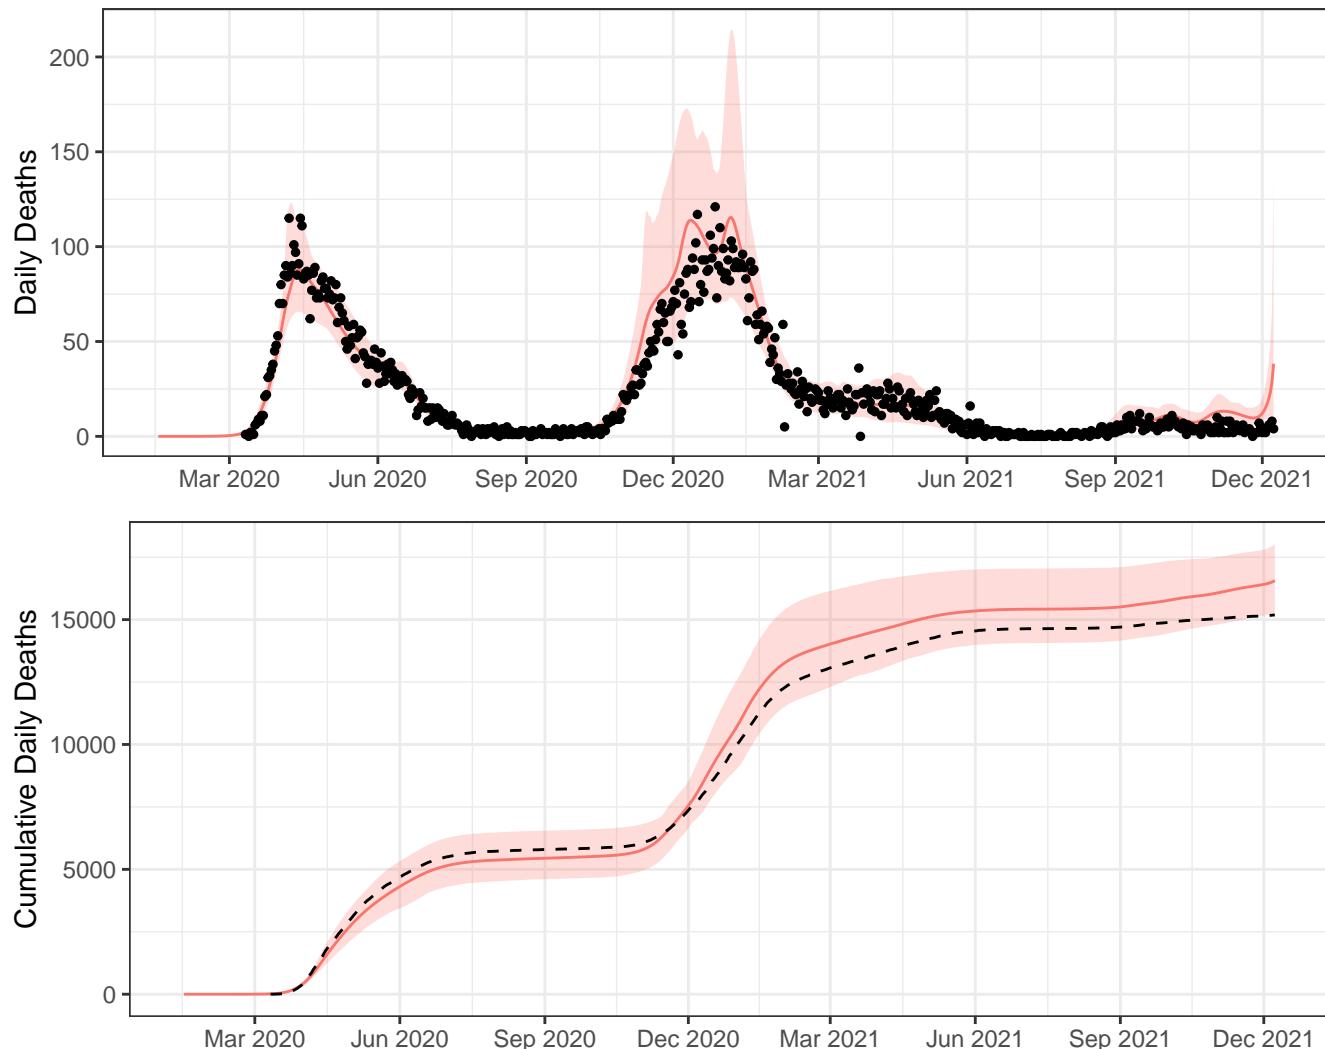

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Slovenia

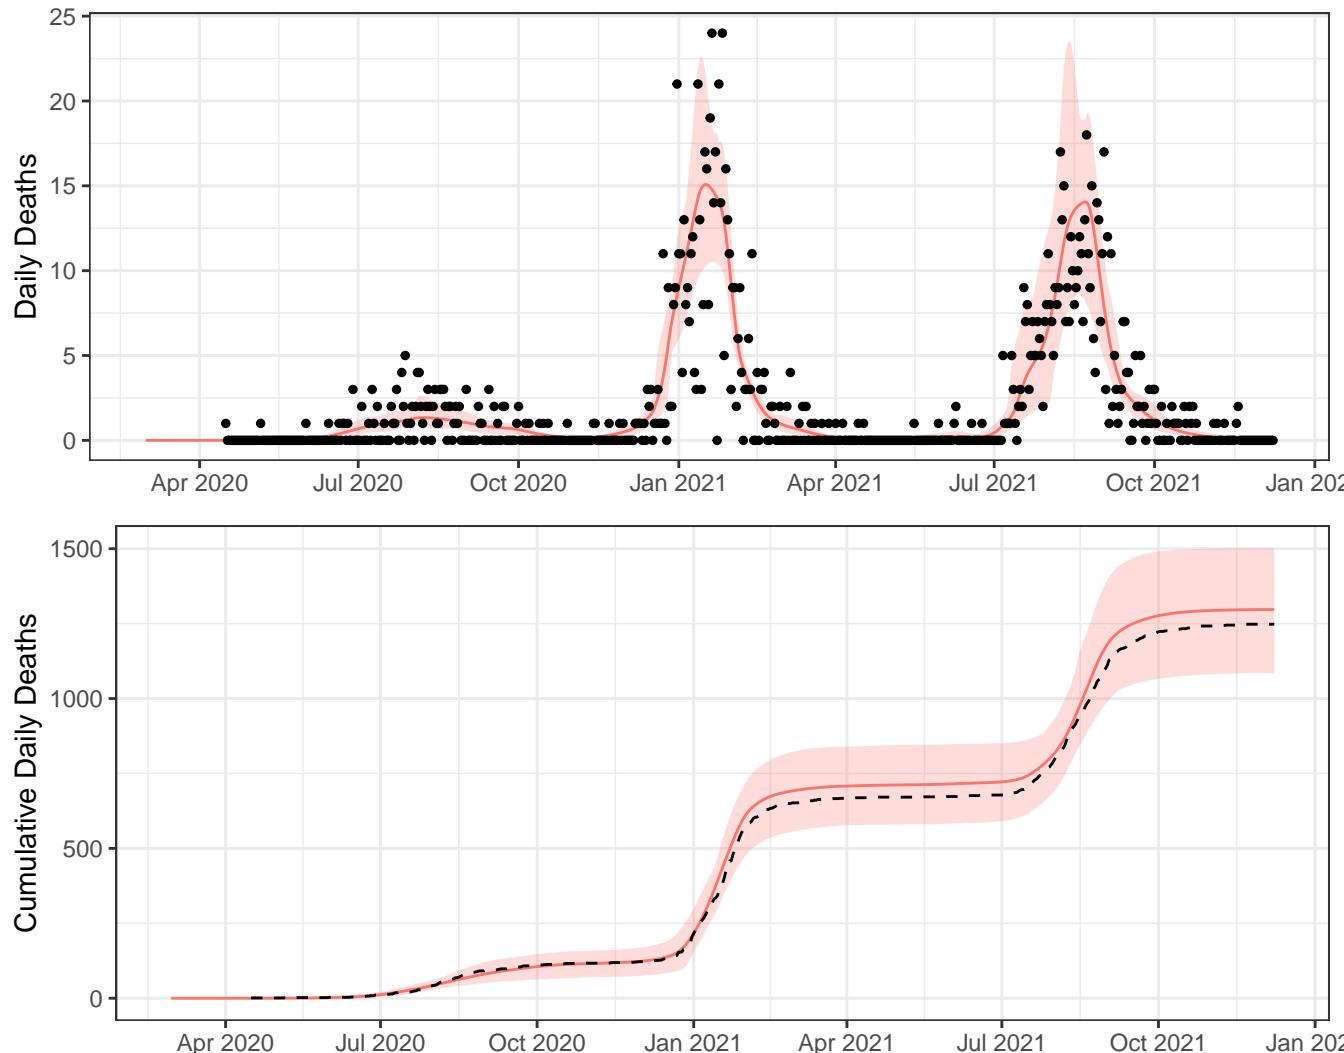

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Sweden

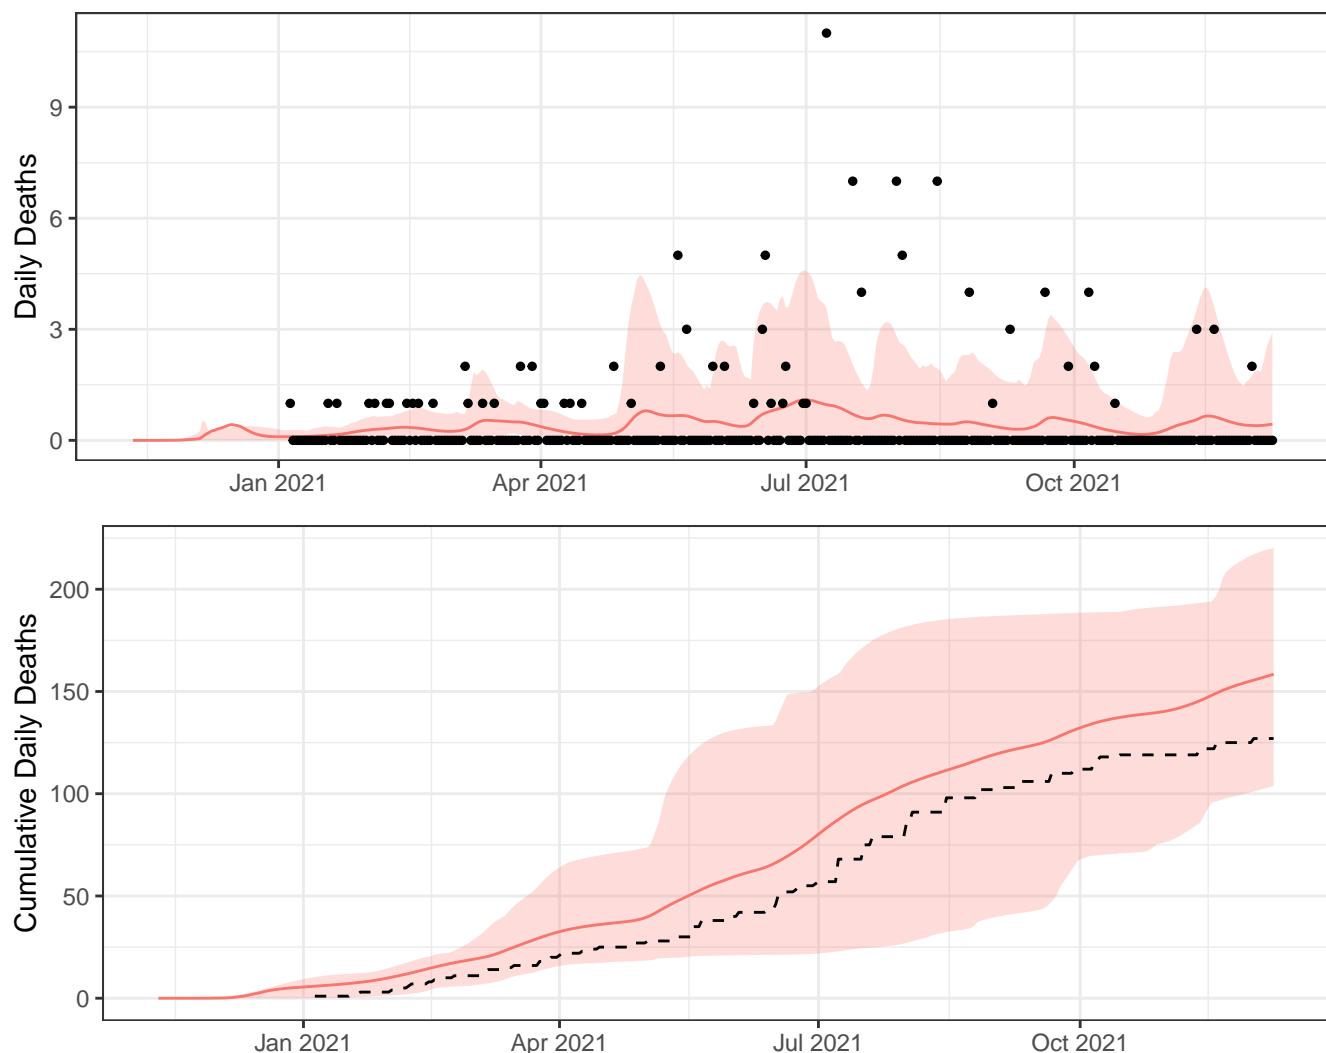

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Eswatini

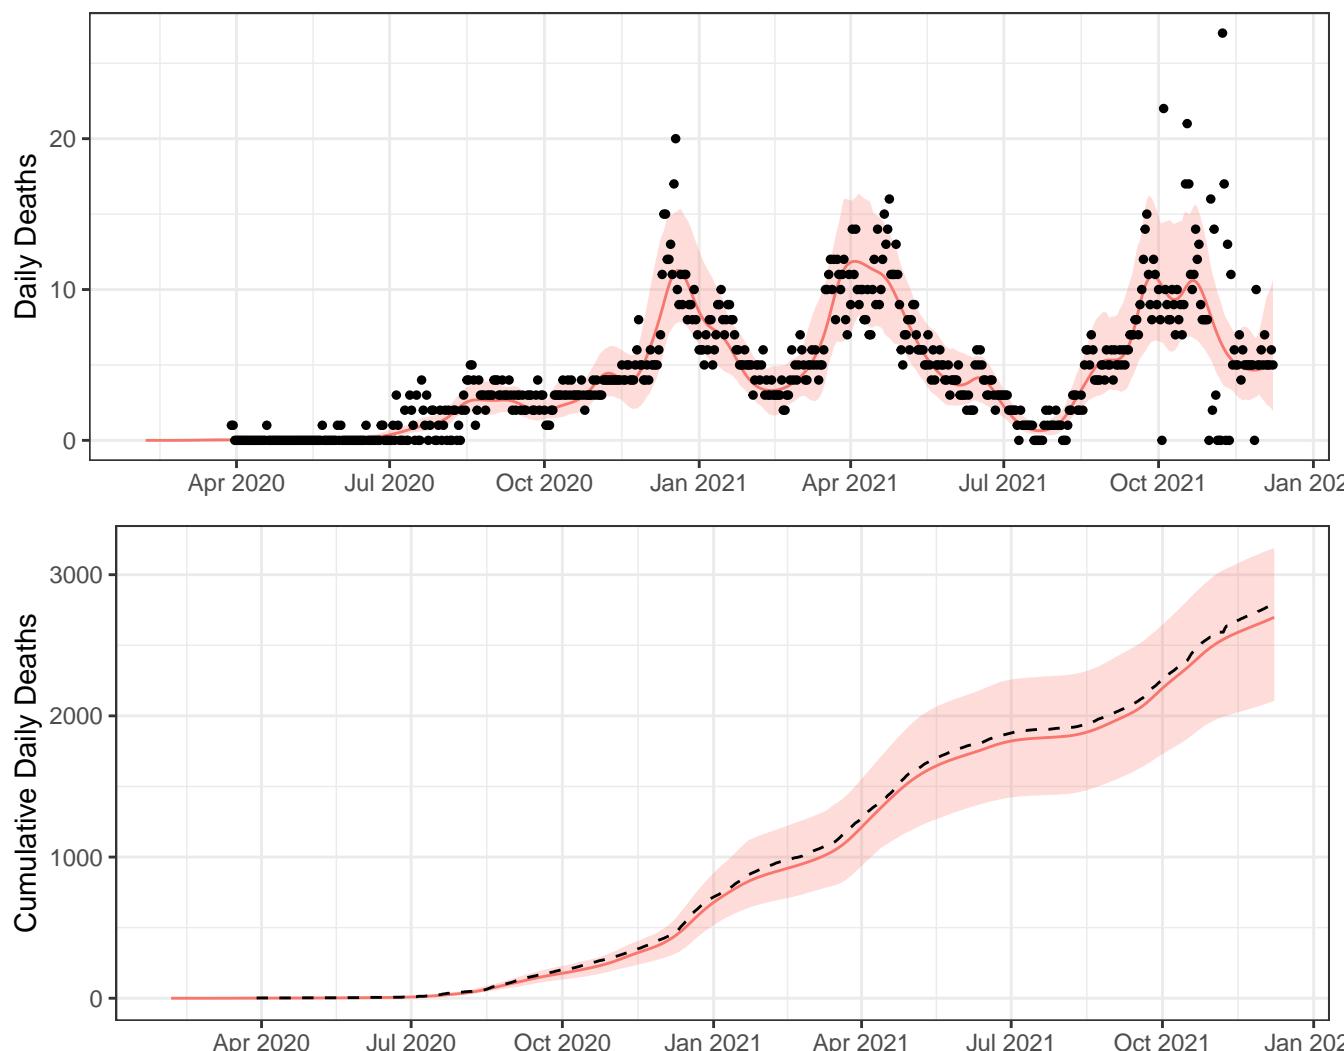

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Seychelles

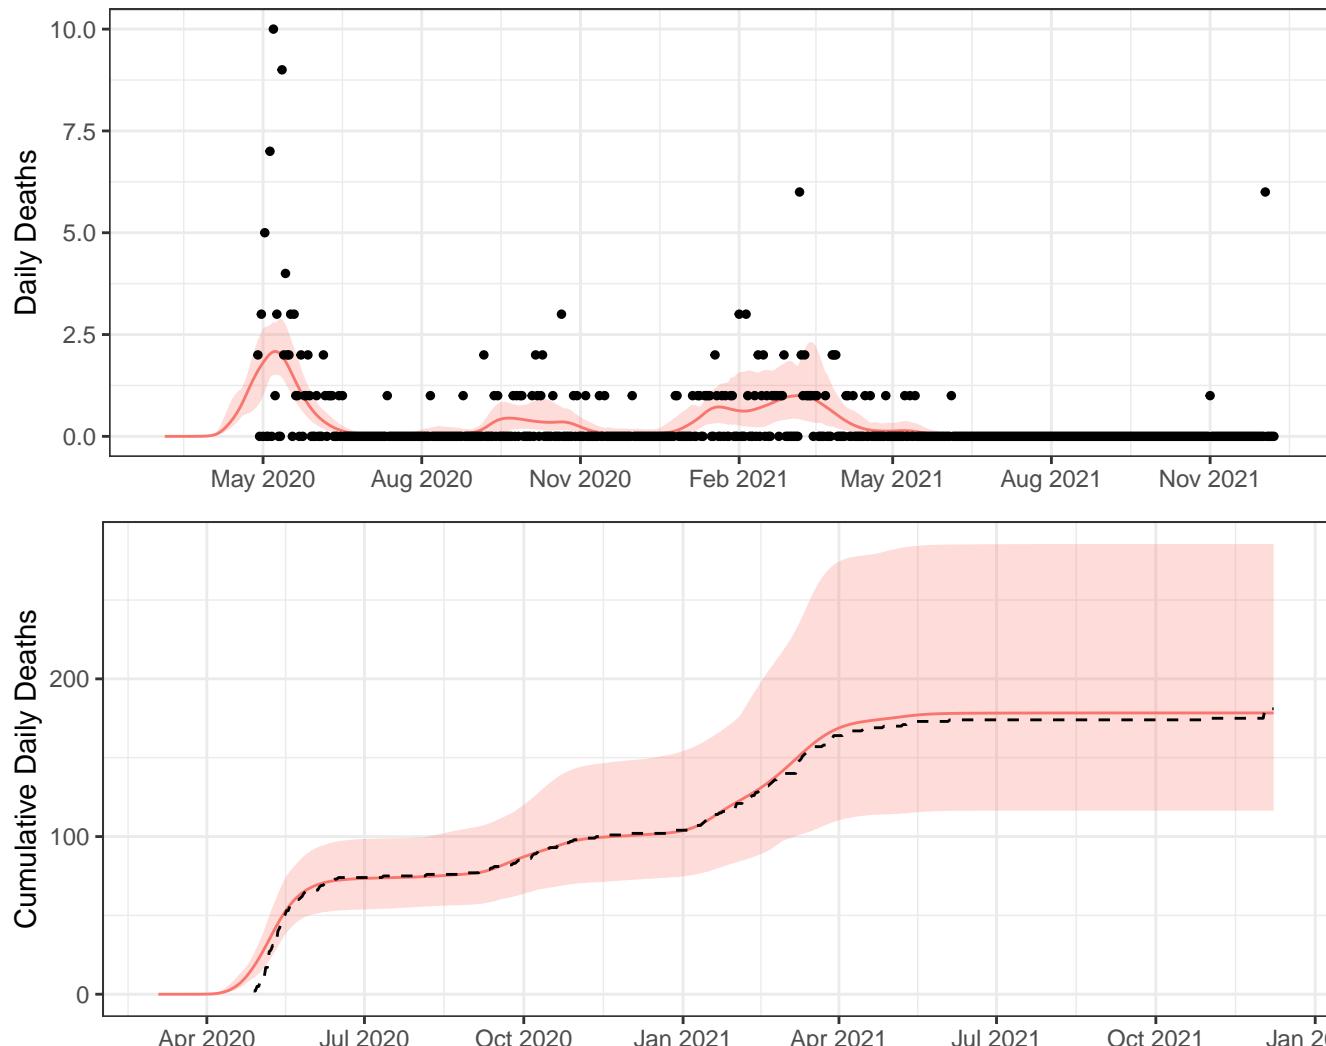

Daily deaths are included with reported COVID–19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Syria

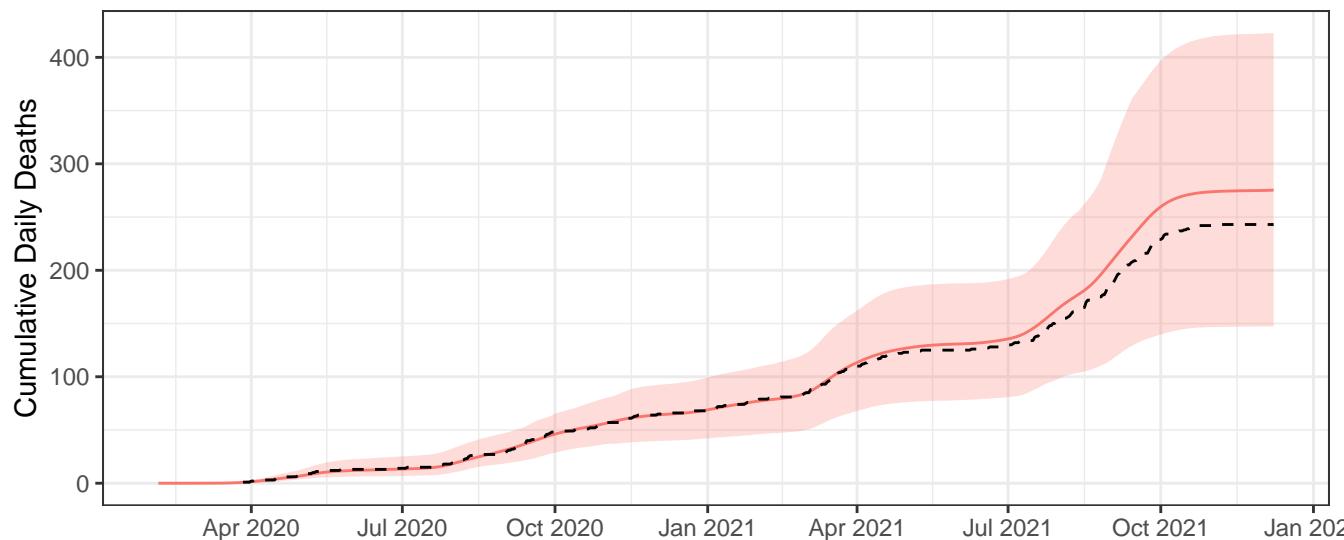

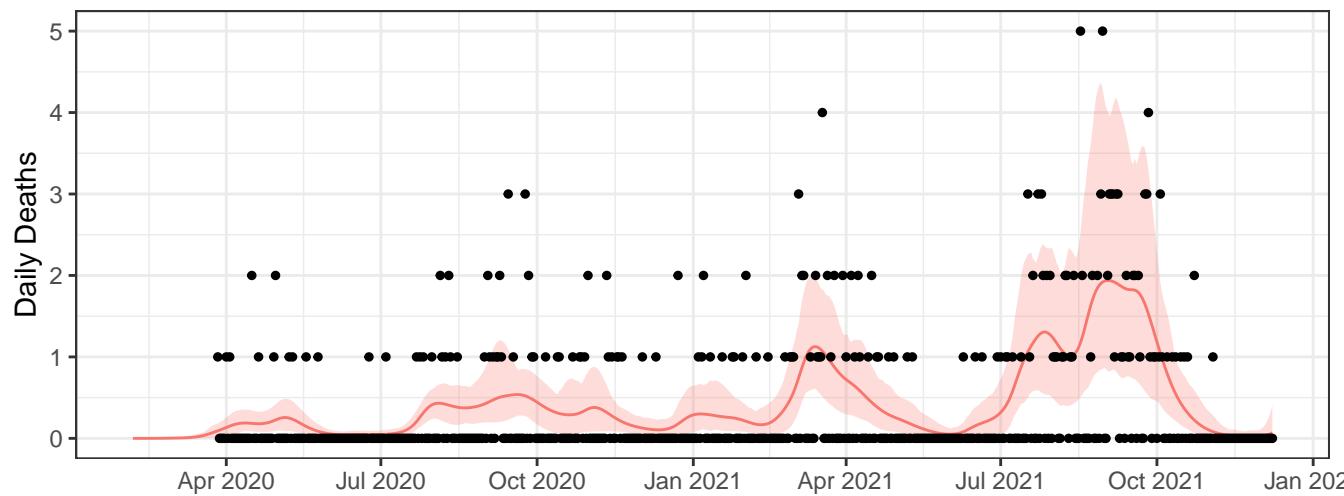

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Chad

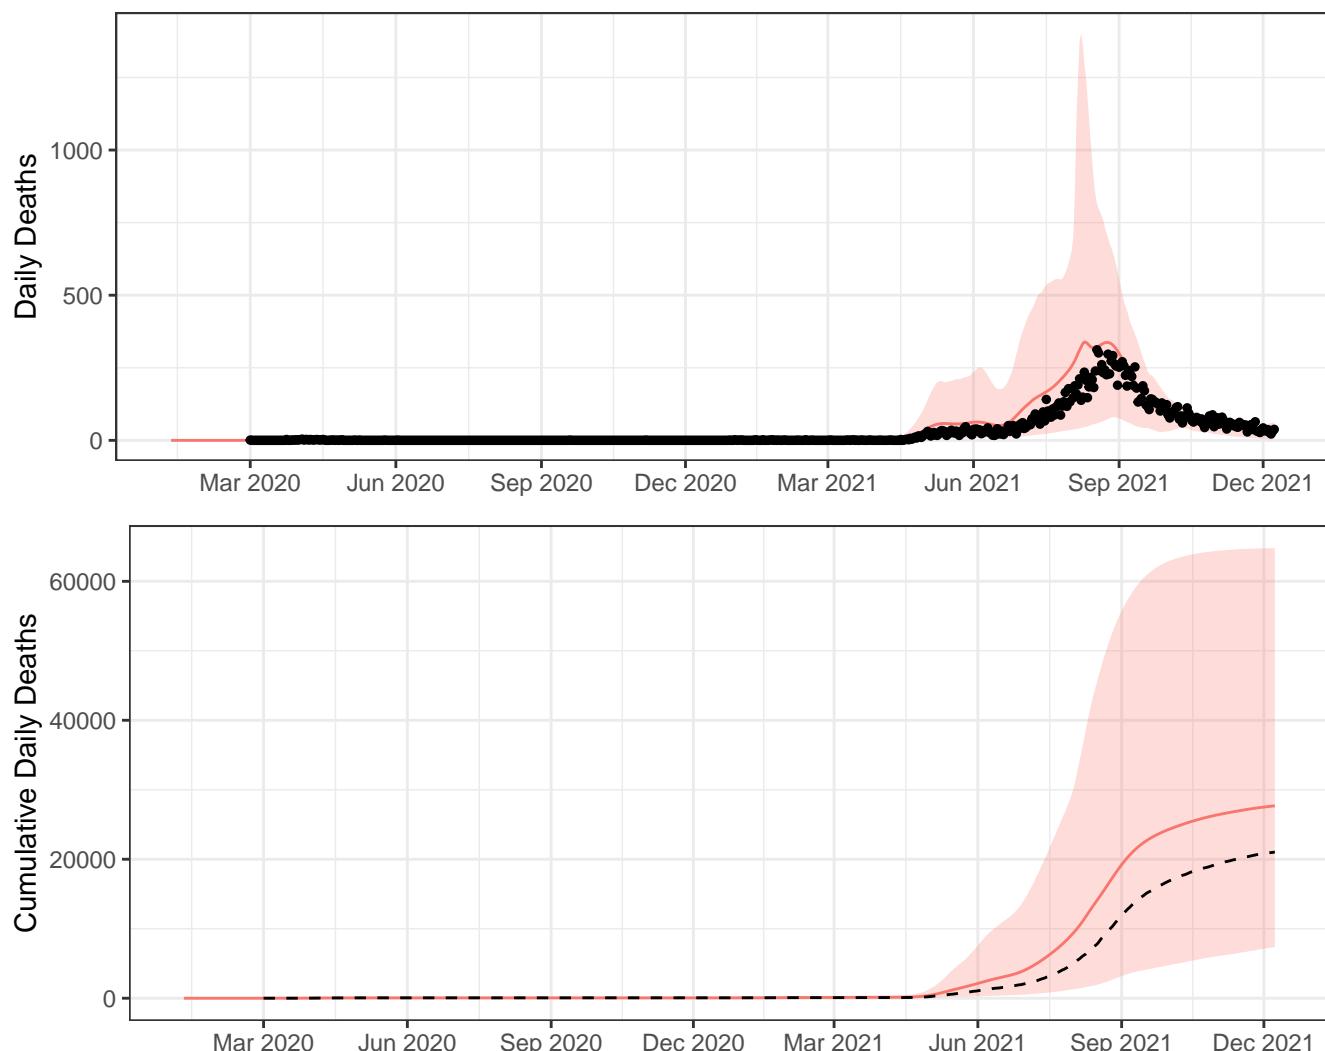

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Togo

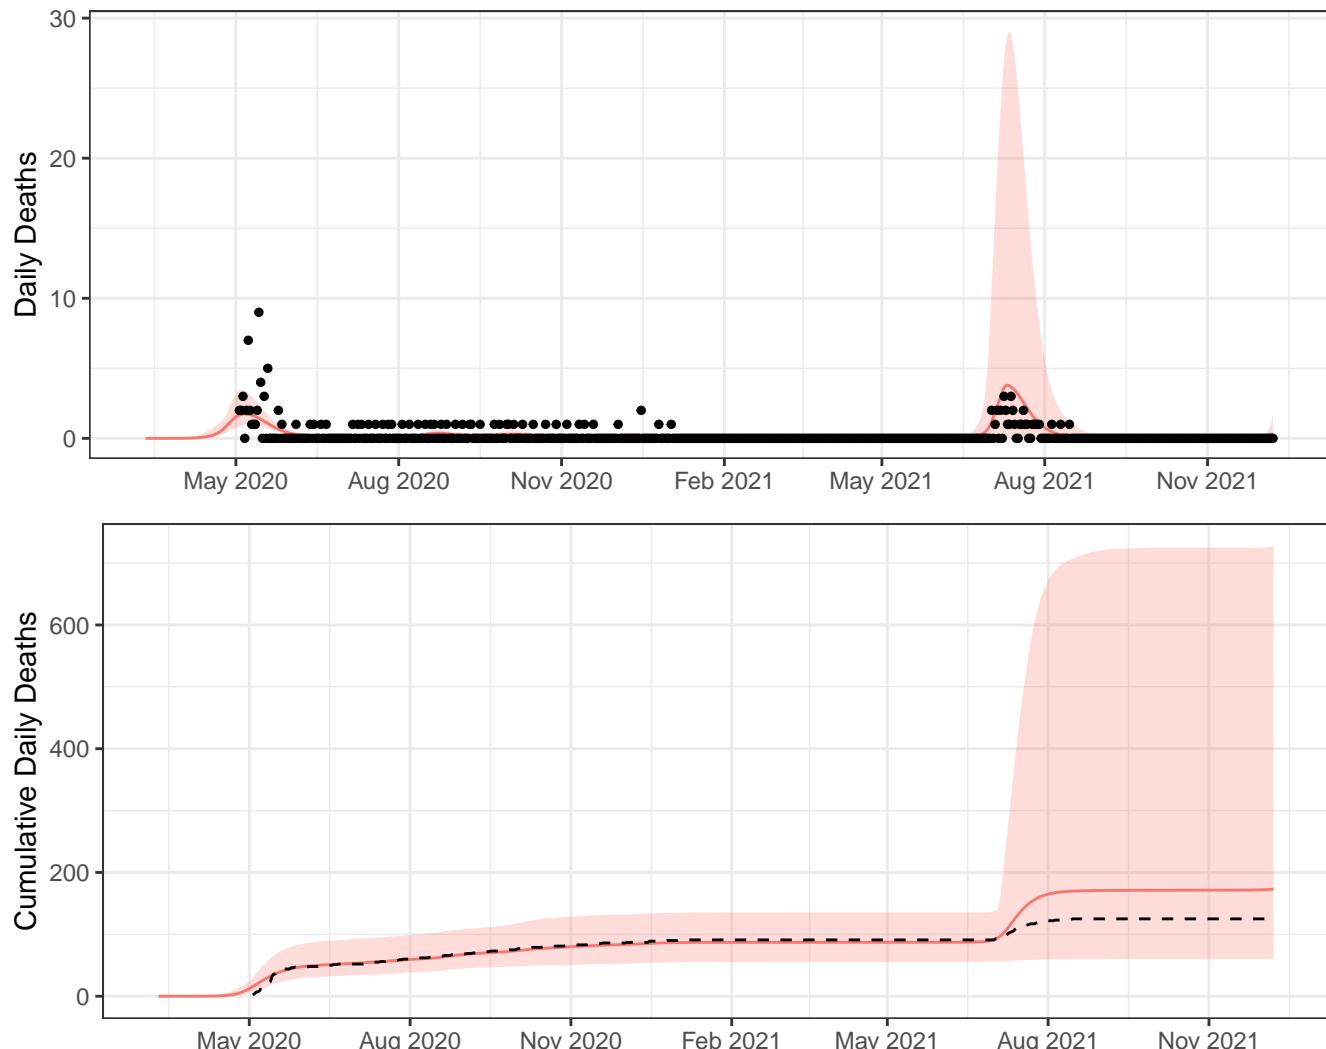

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Thailand

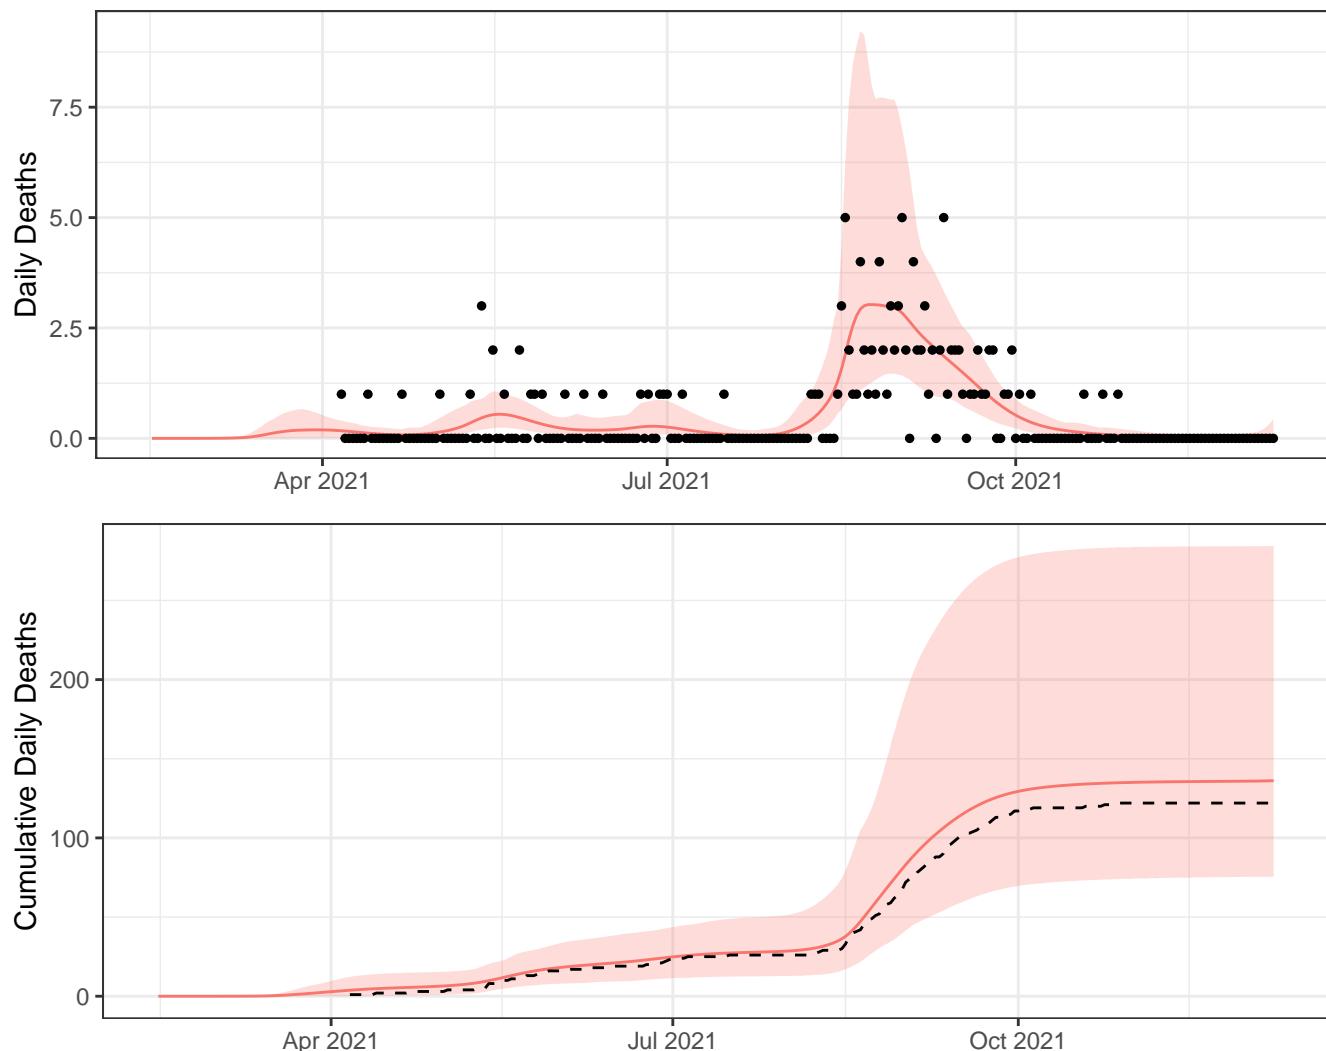

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Tajikistan

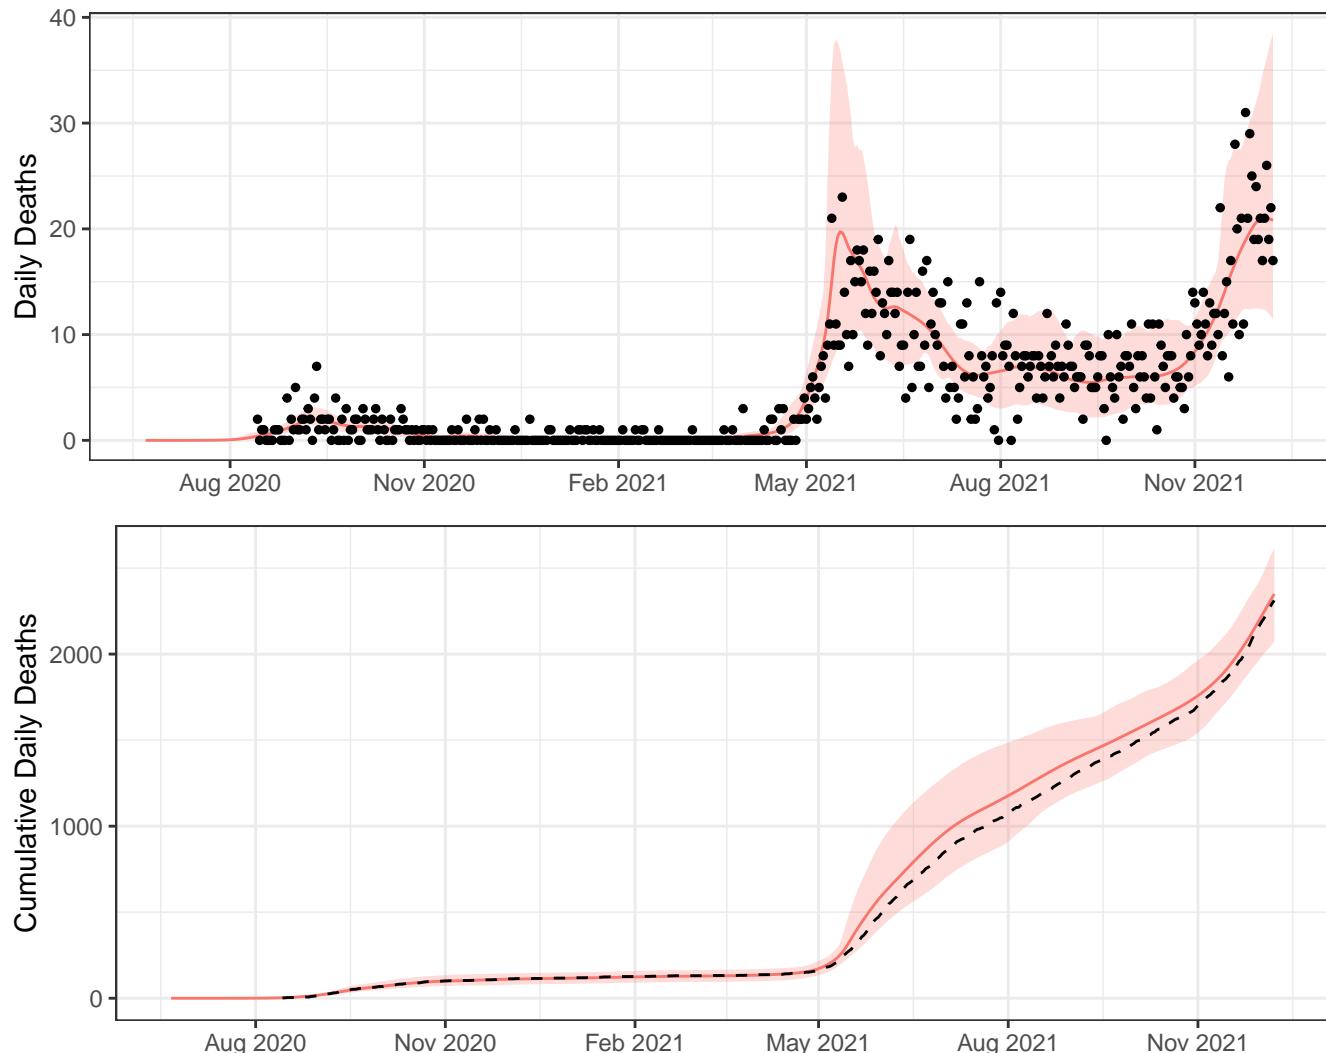

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Timor-Leste

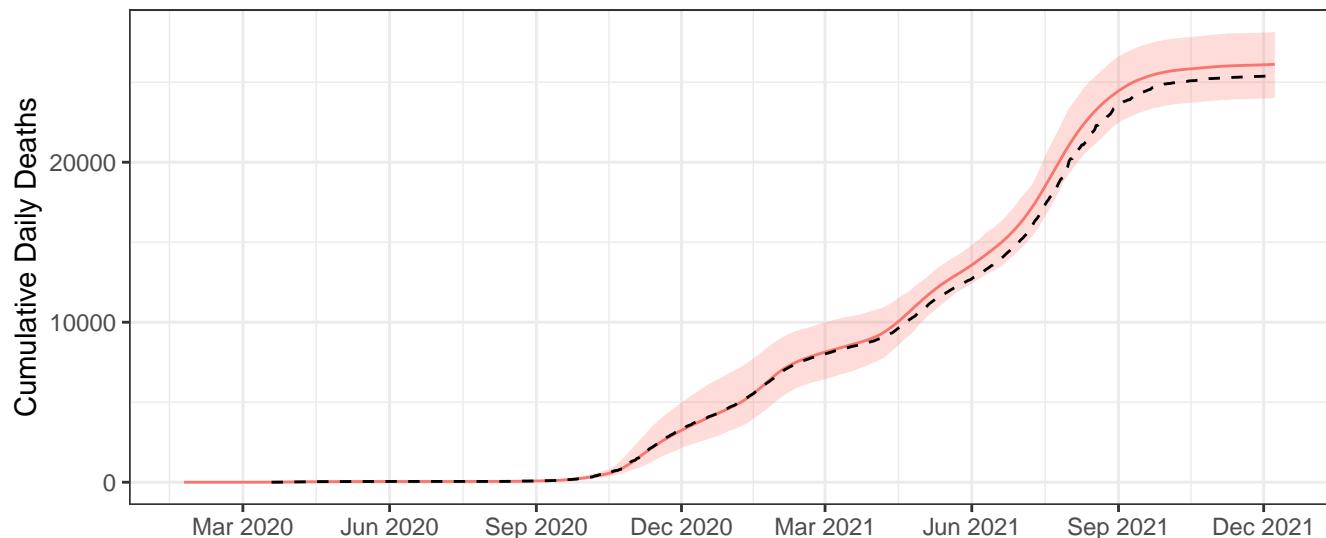

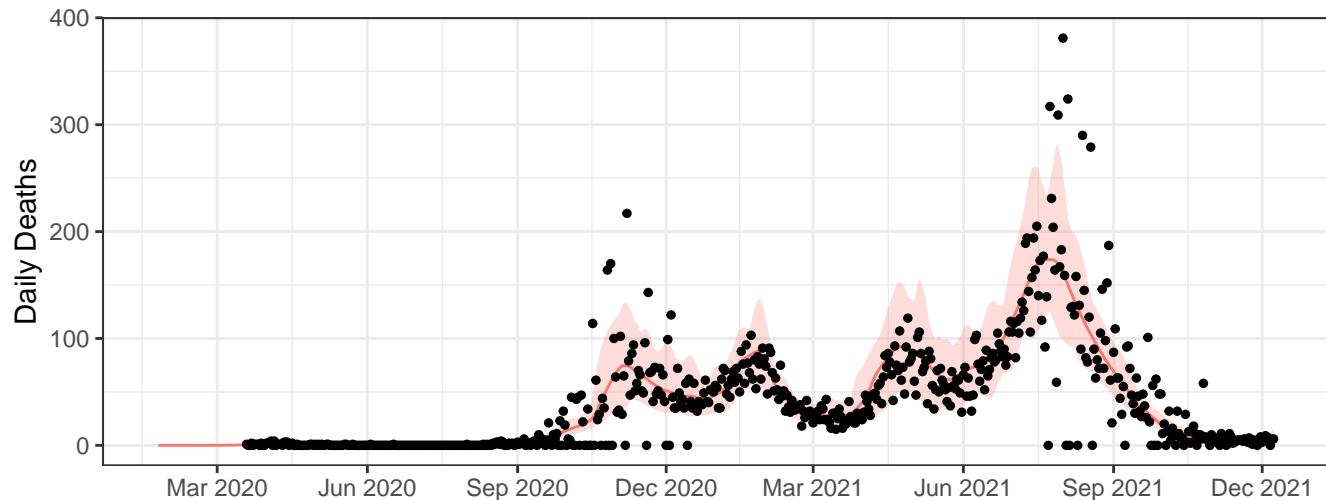

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Trinidad and Tobago

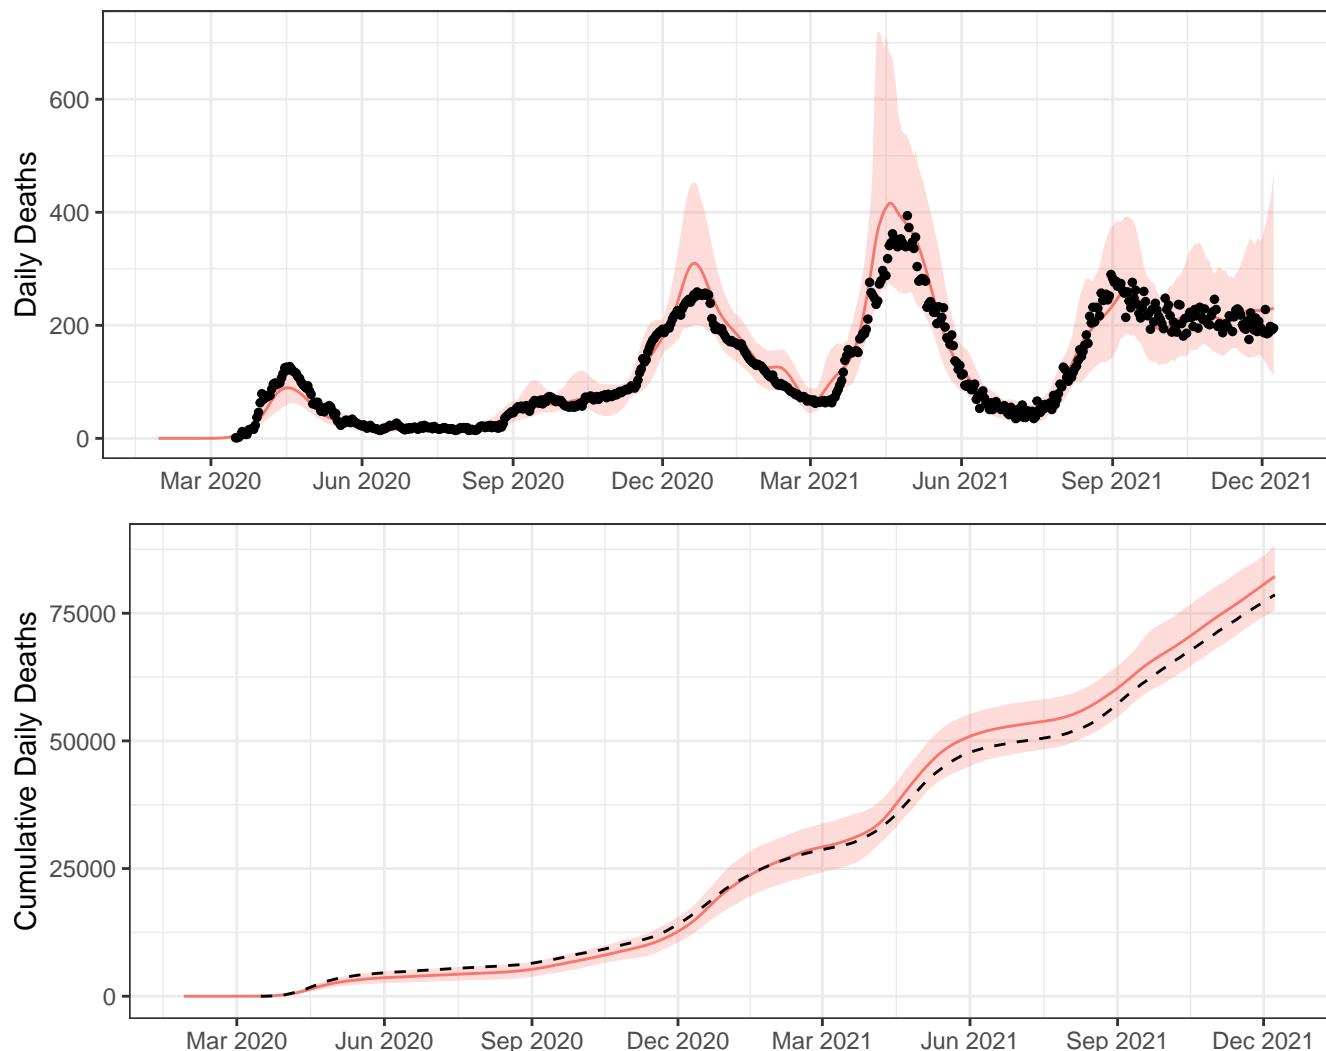

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Tunisia

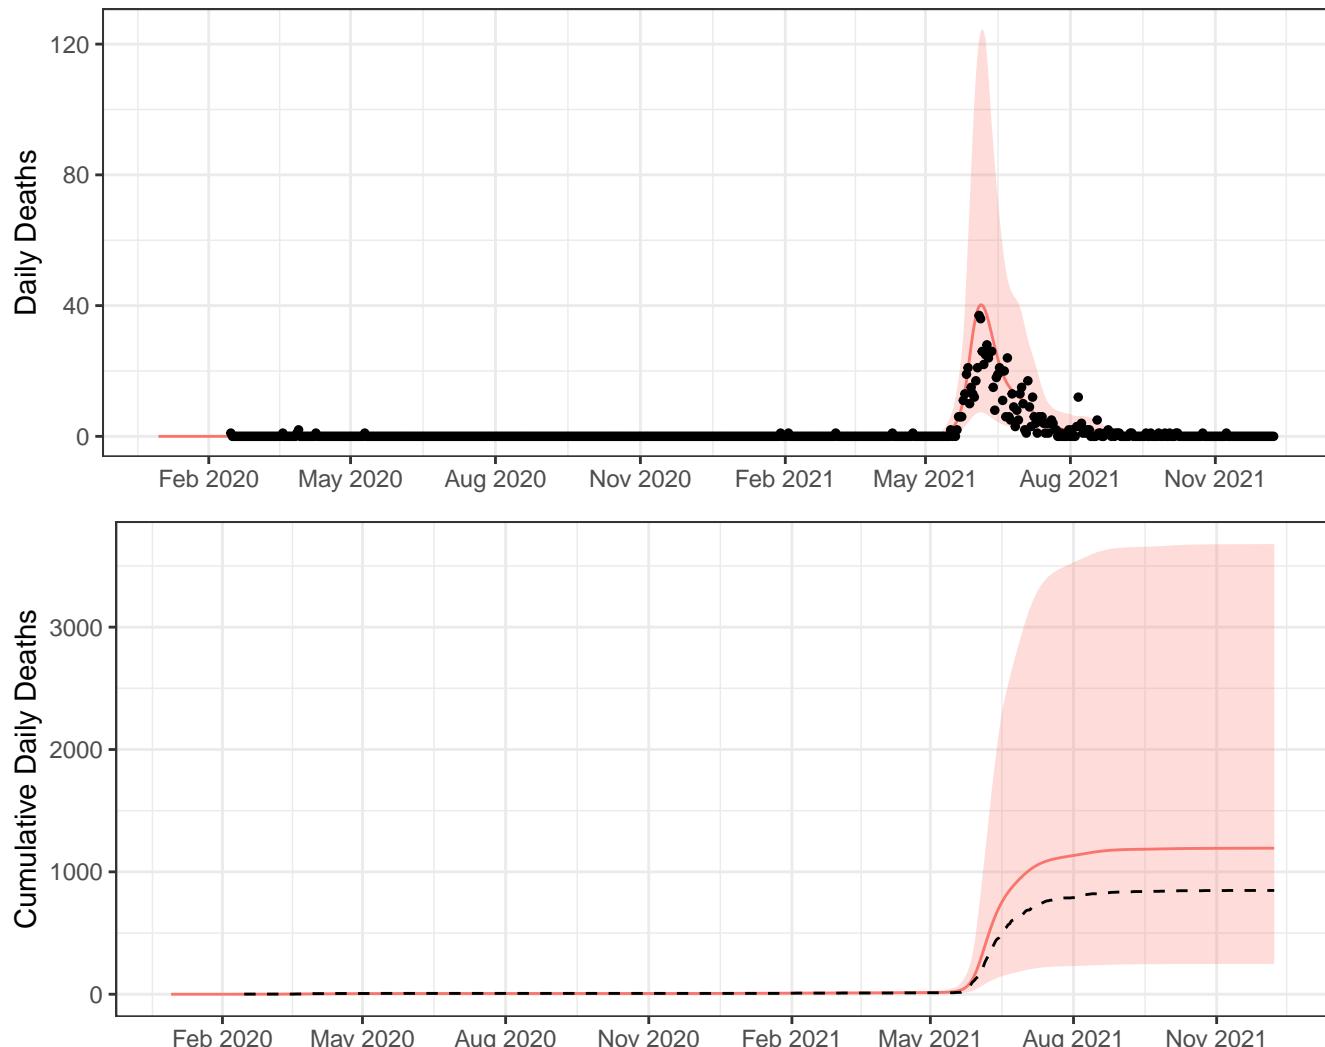

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Turkey

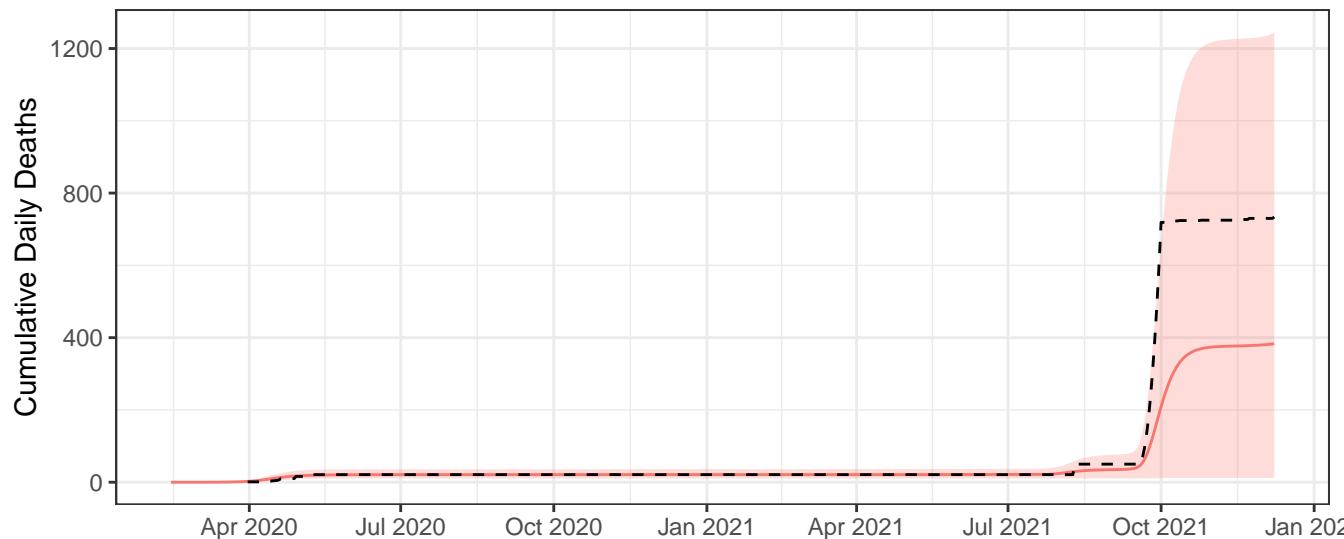

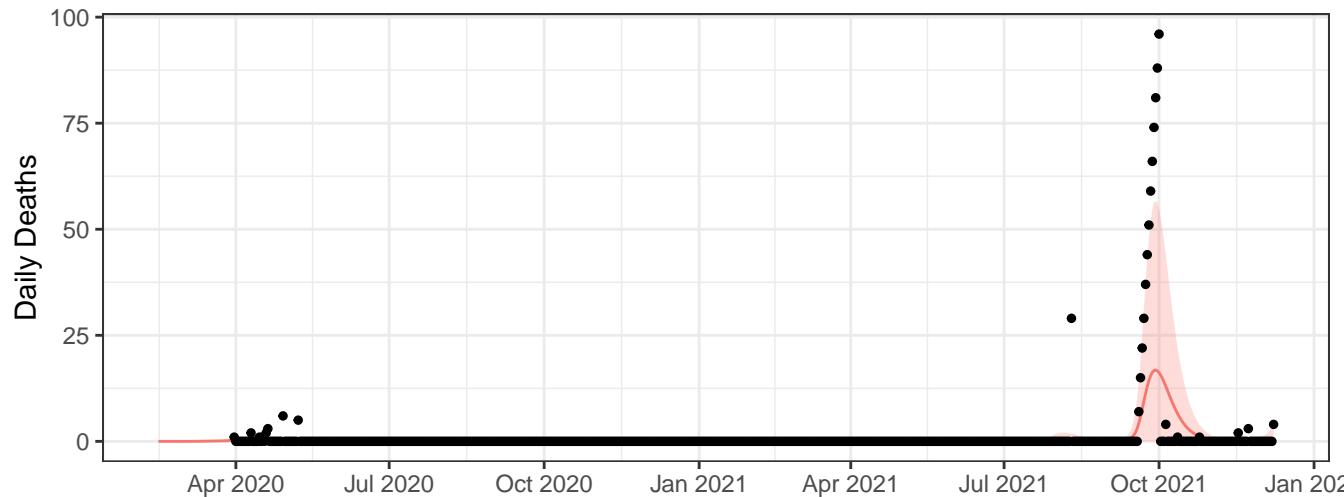

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# China, Taiwan Province of China

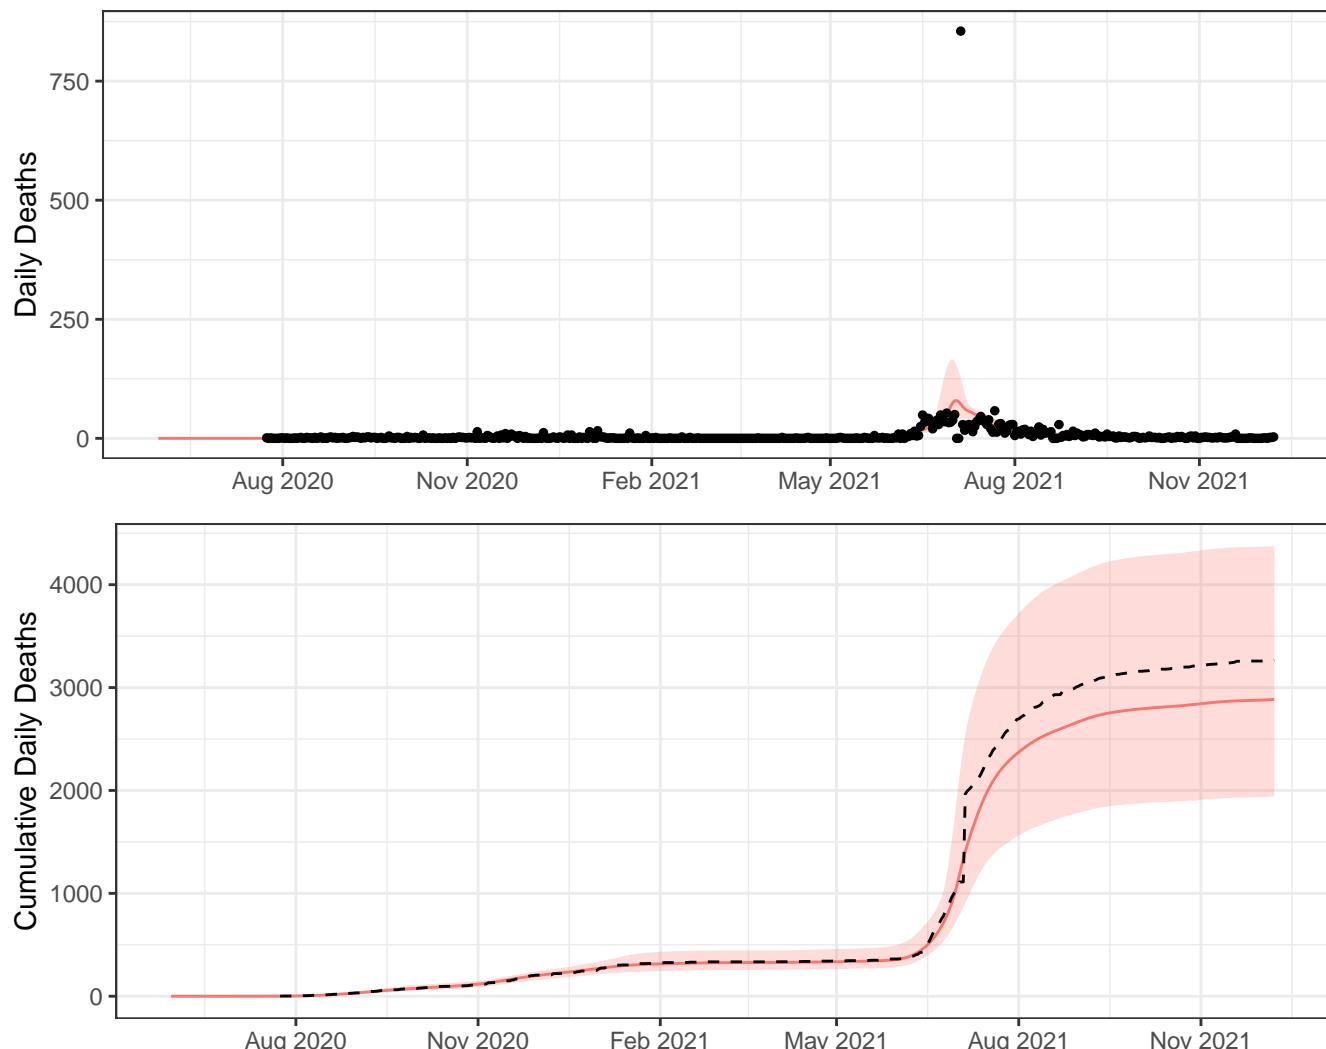

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

Tanzania

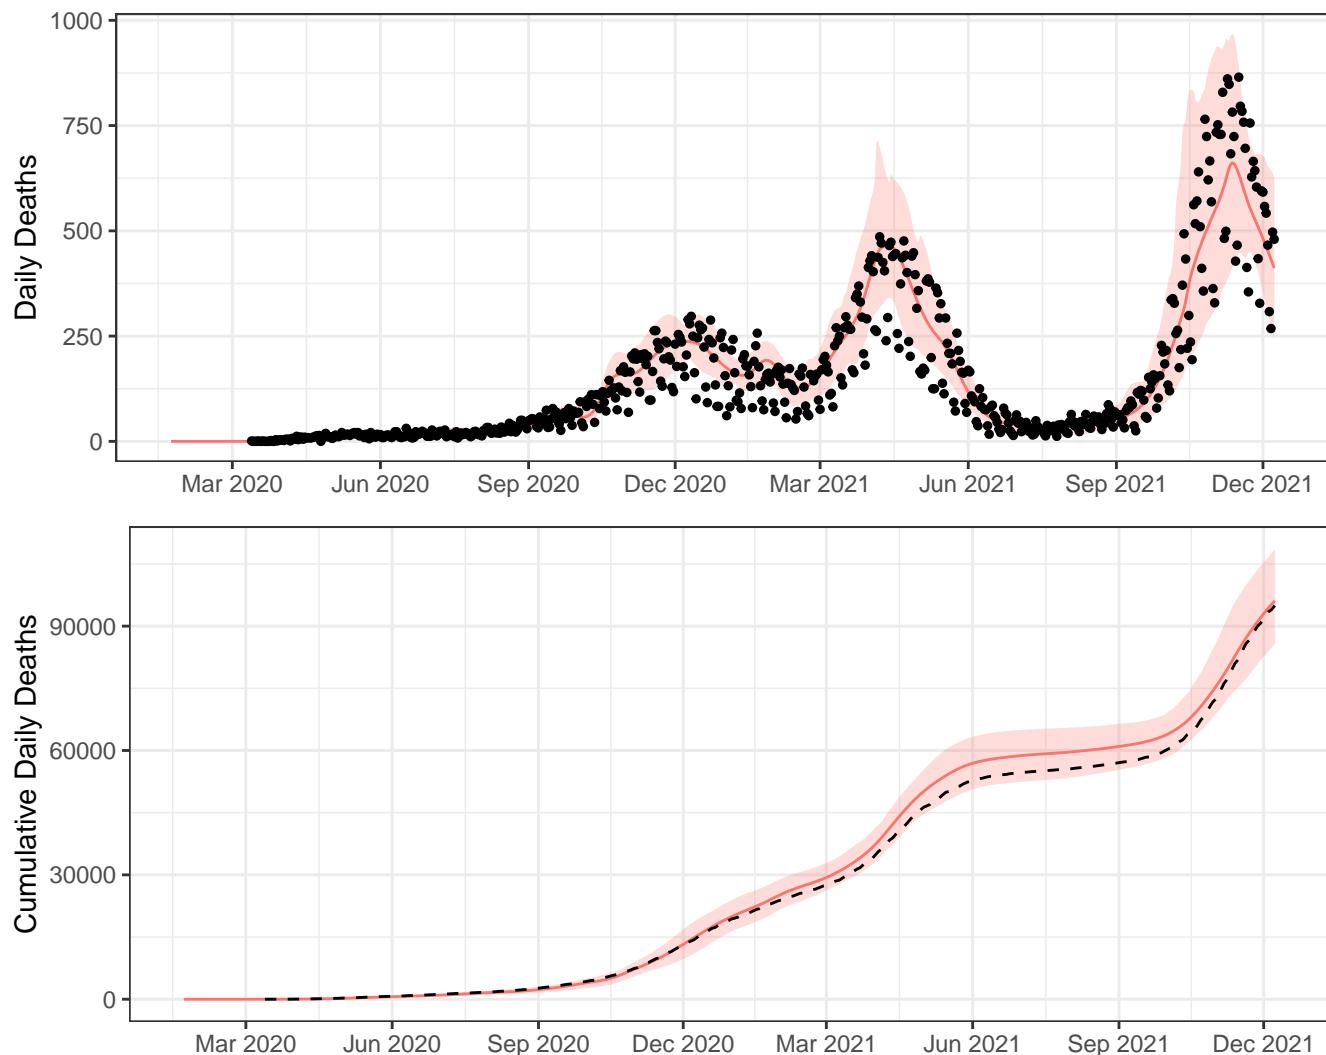

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Uganda

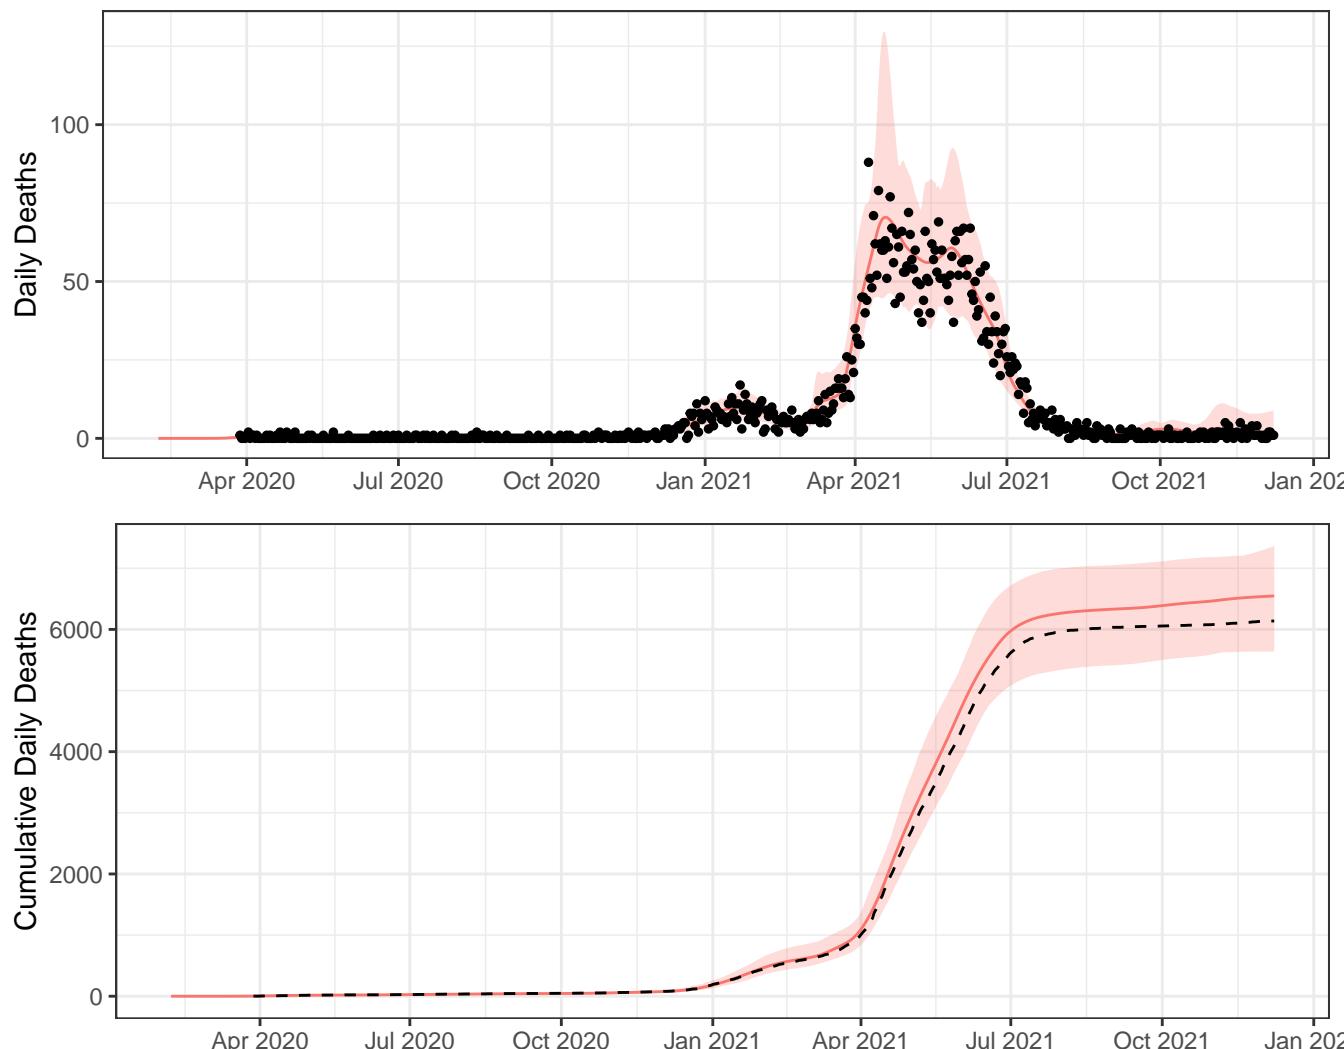

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Ukraine

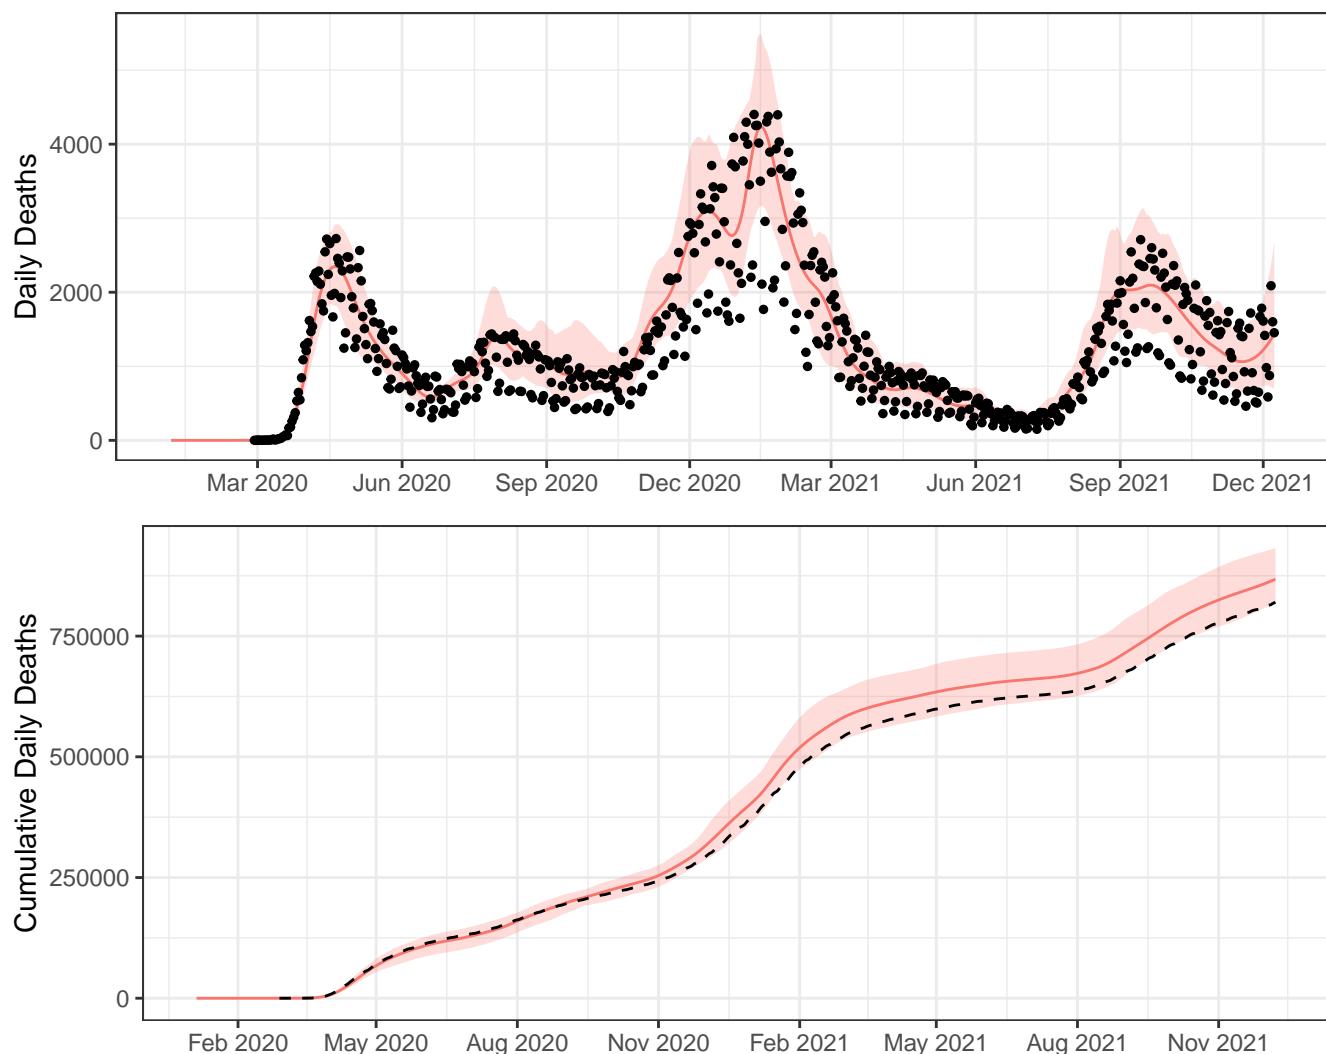

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Uruguay

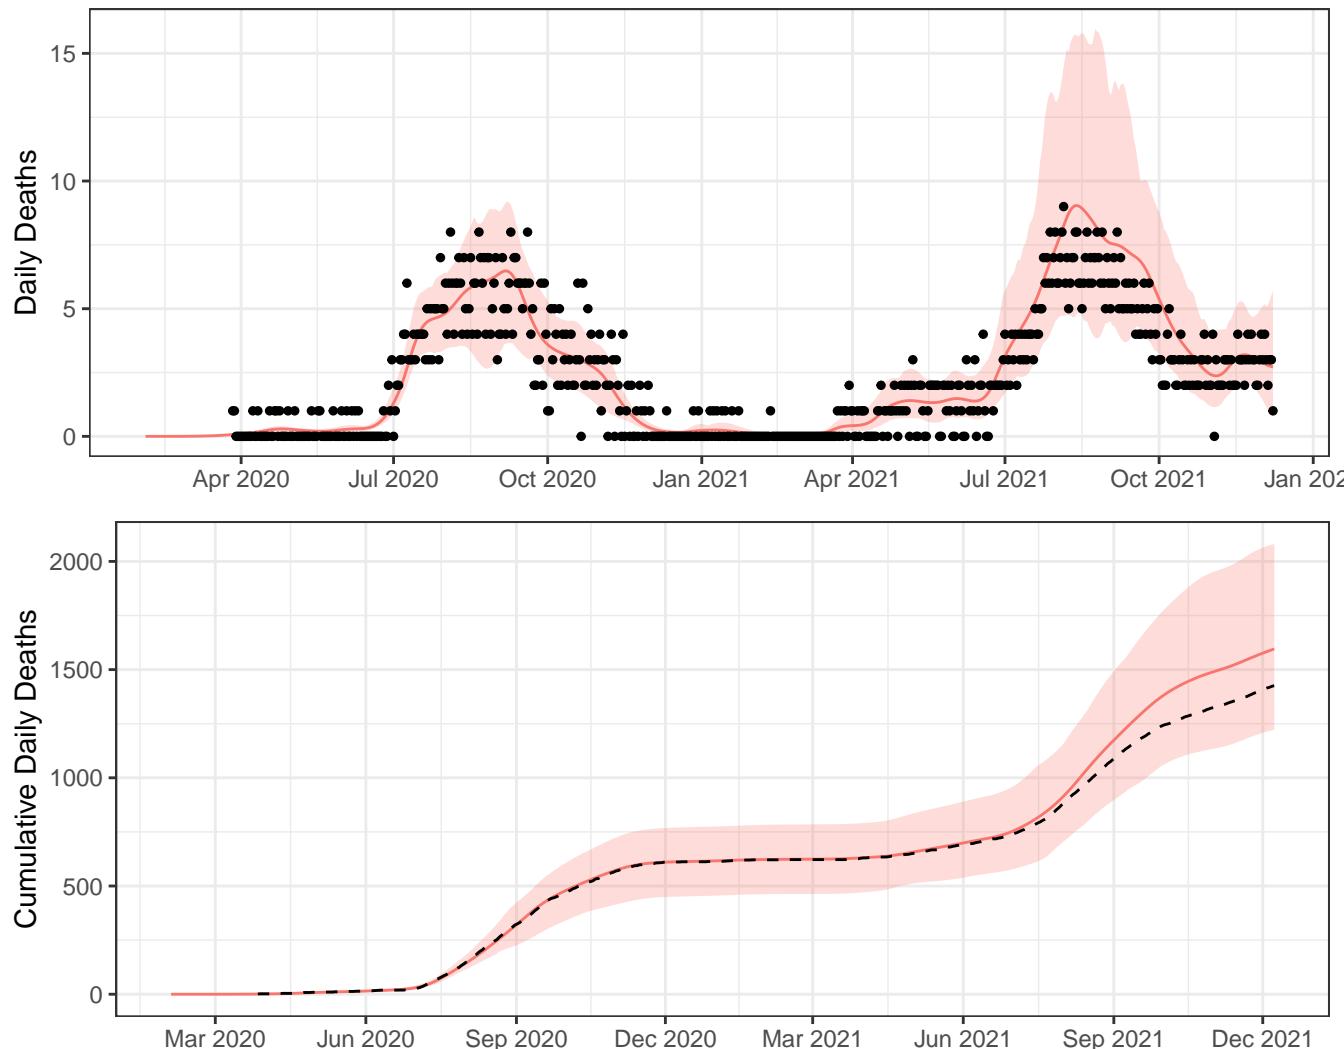

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# United States

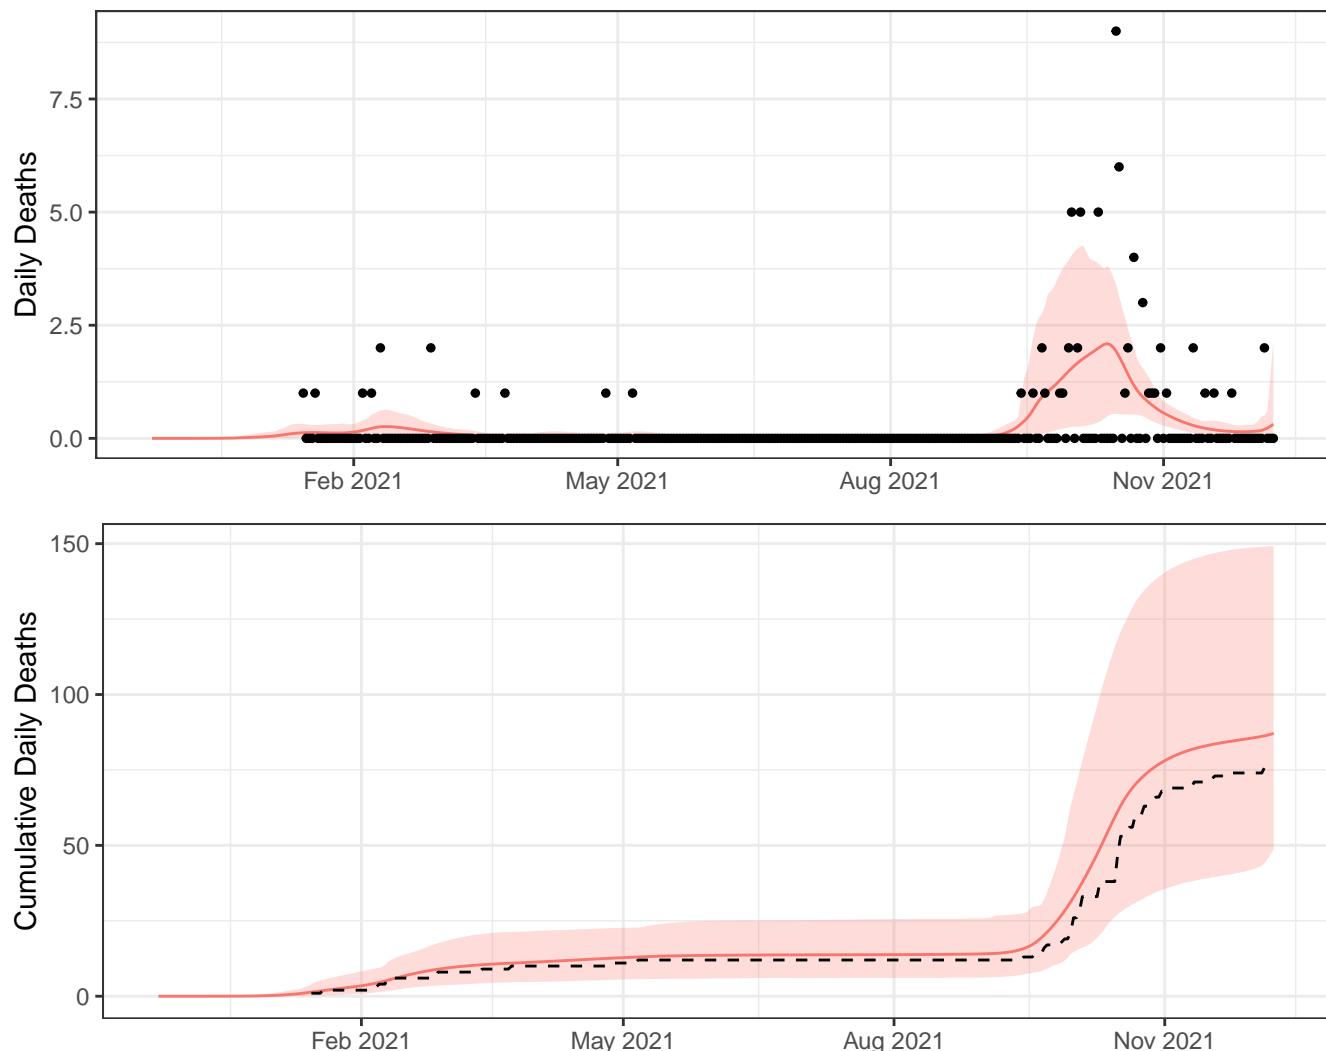

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Uzbekistan

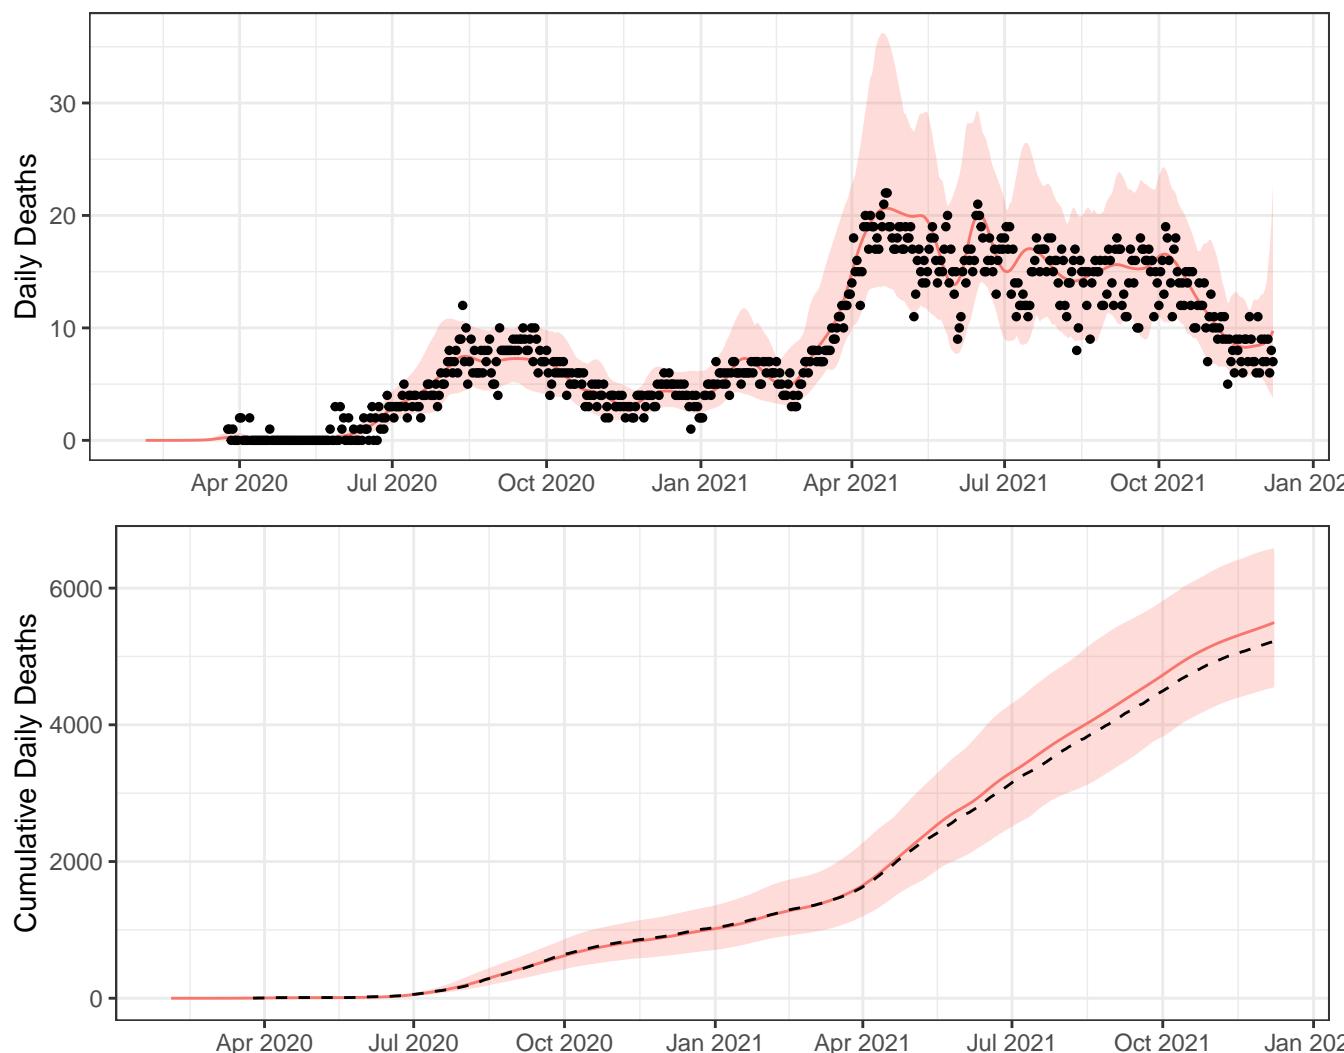

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# St. Vincent and the Grenadines

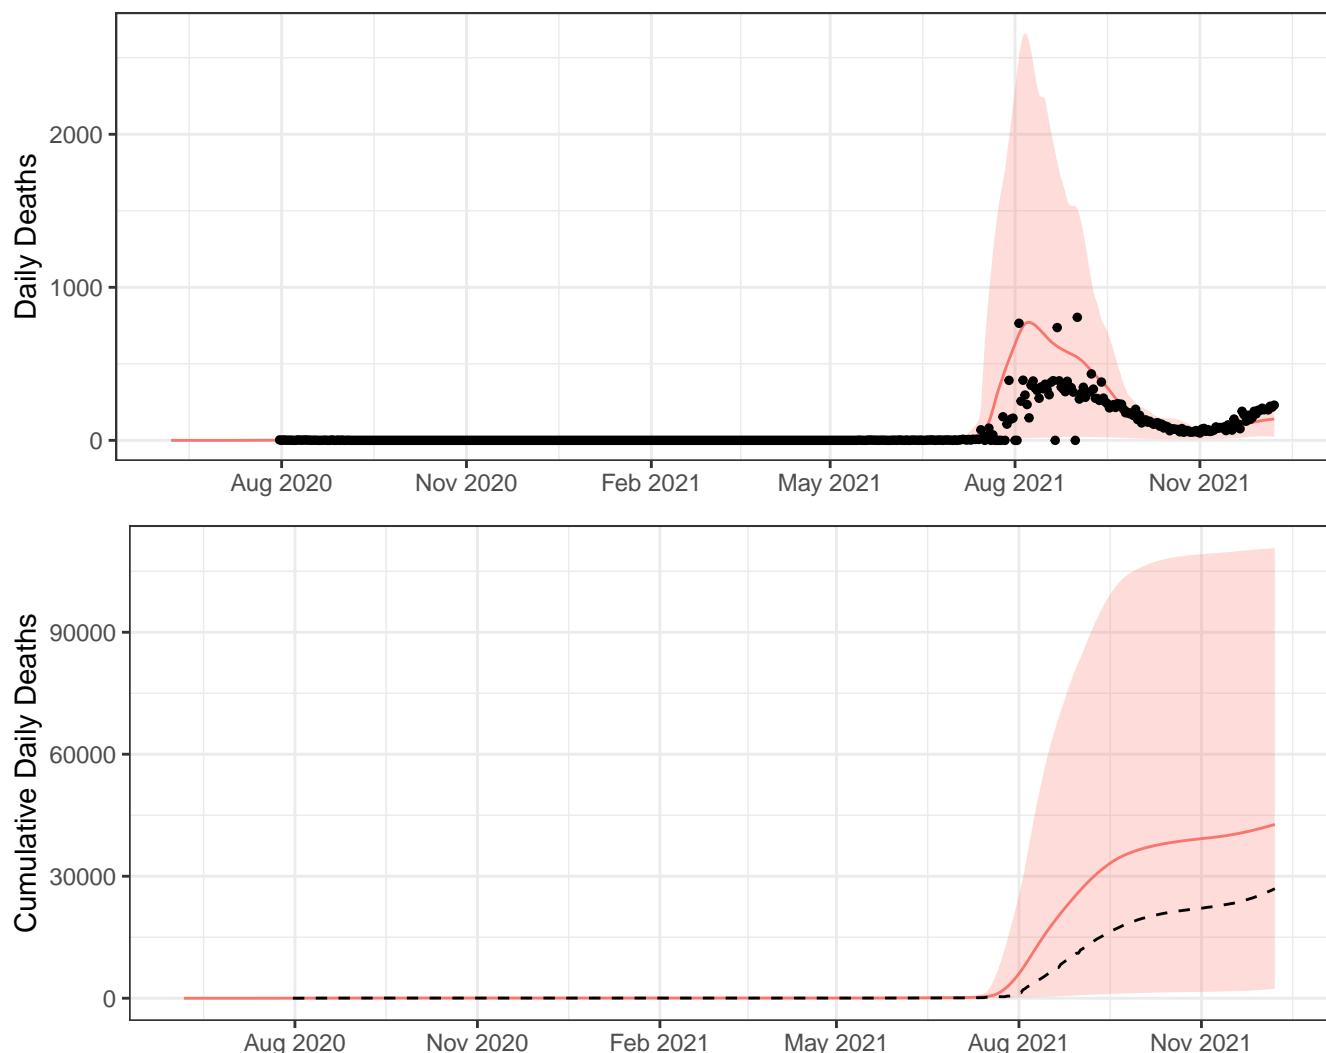

Daily deaths are included with reported COVID–19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Venezuela

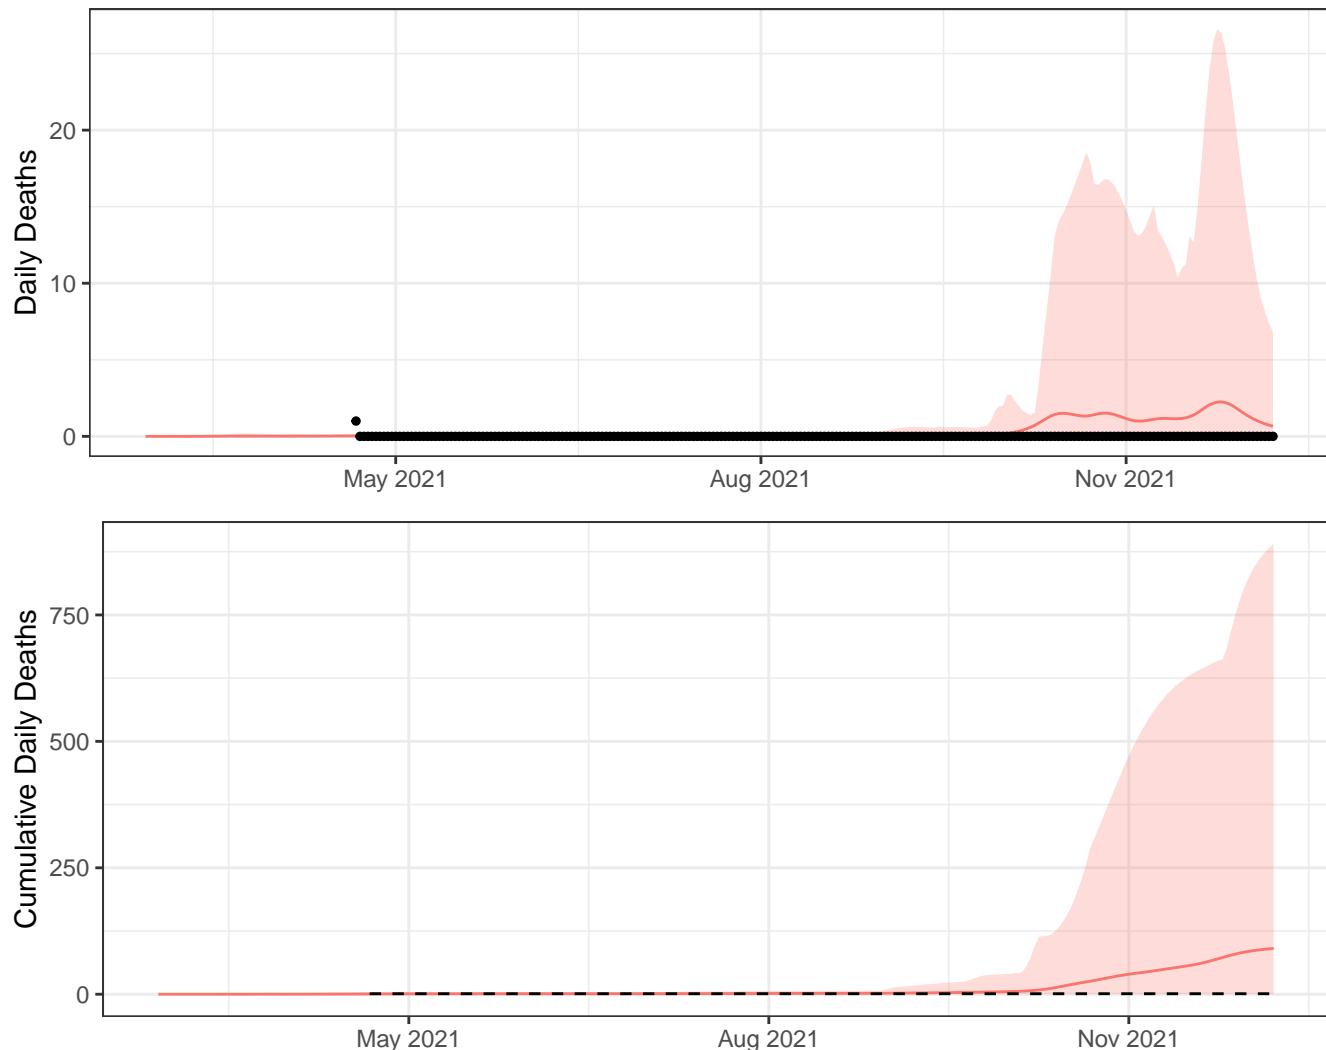

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Vietnam

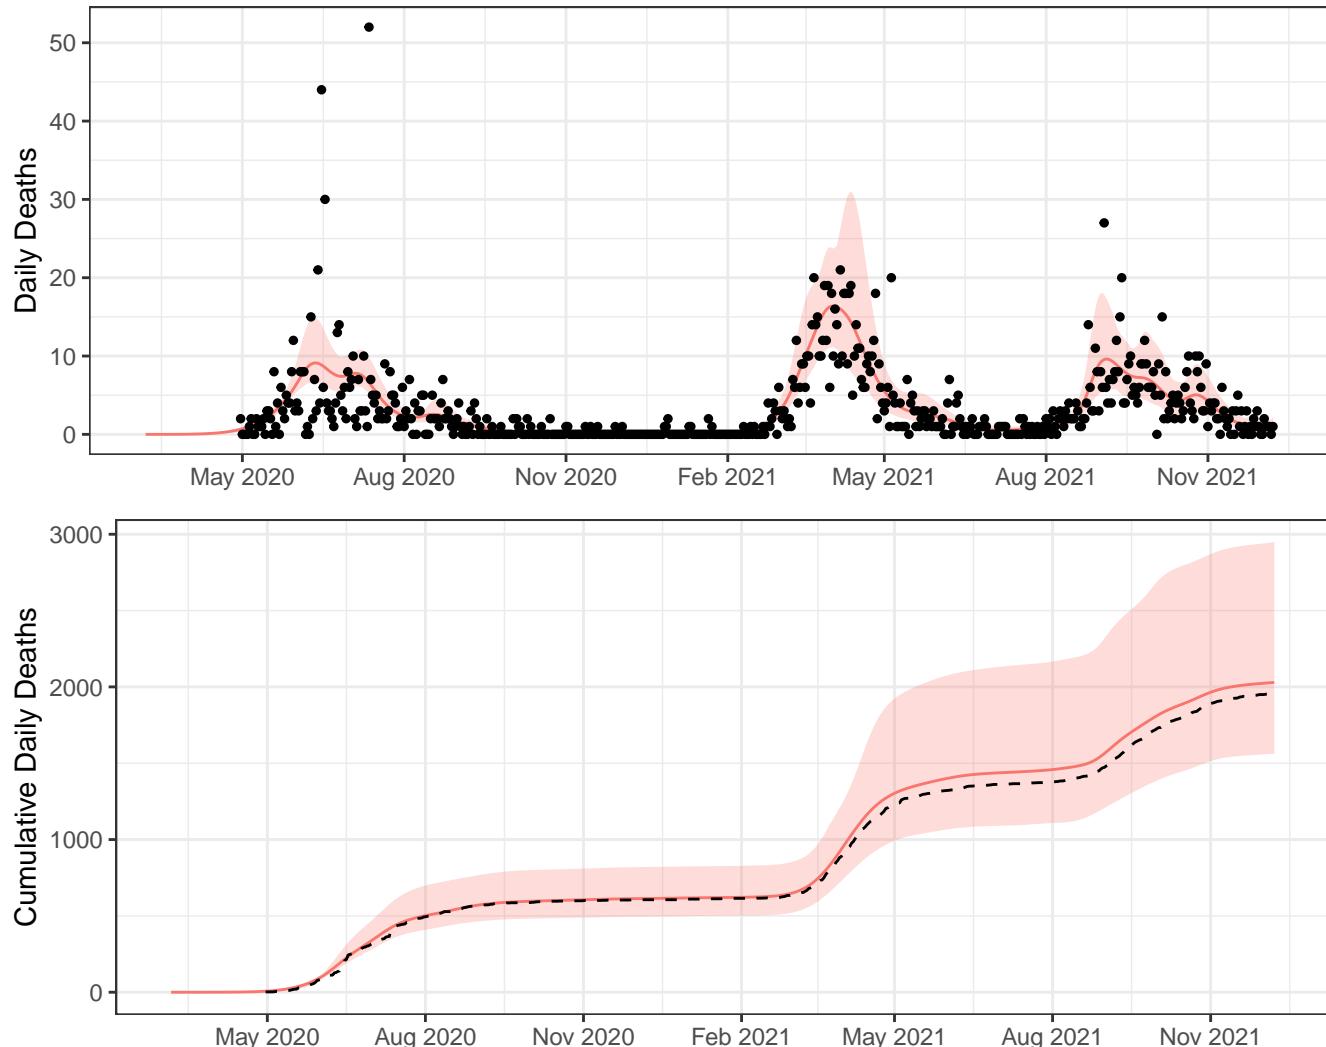

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Vanuatu

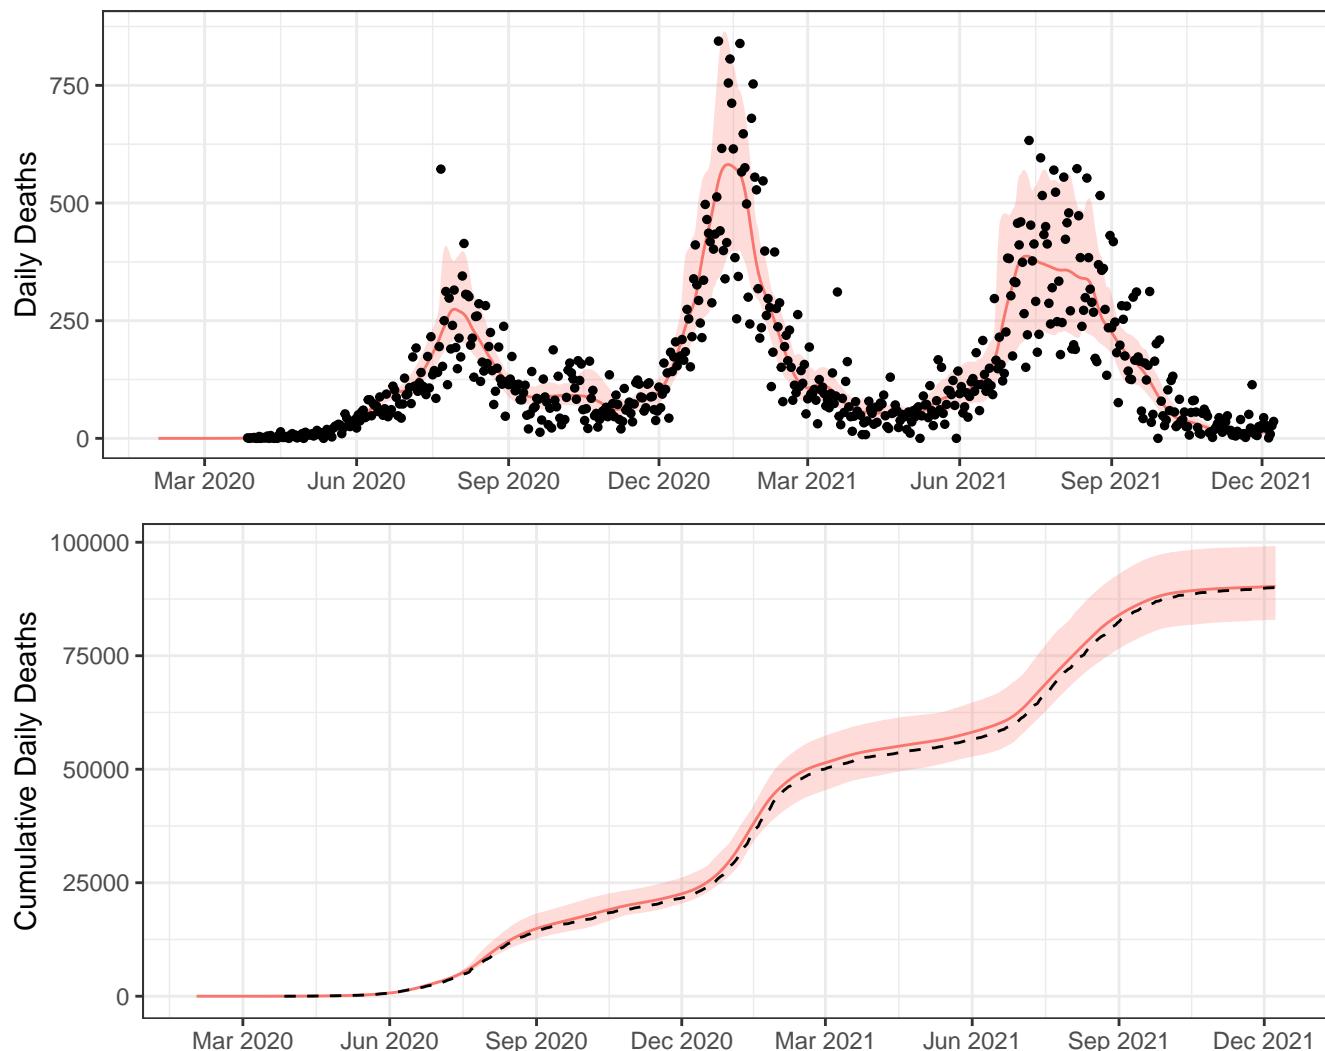

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Yemen

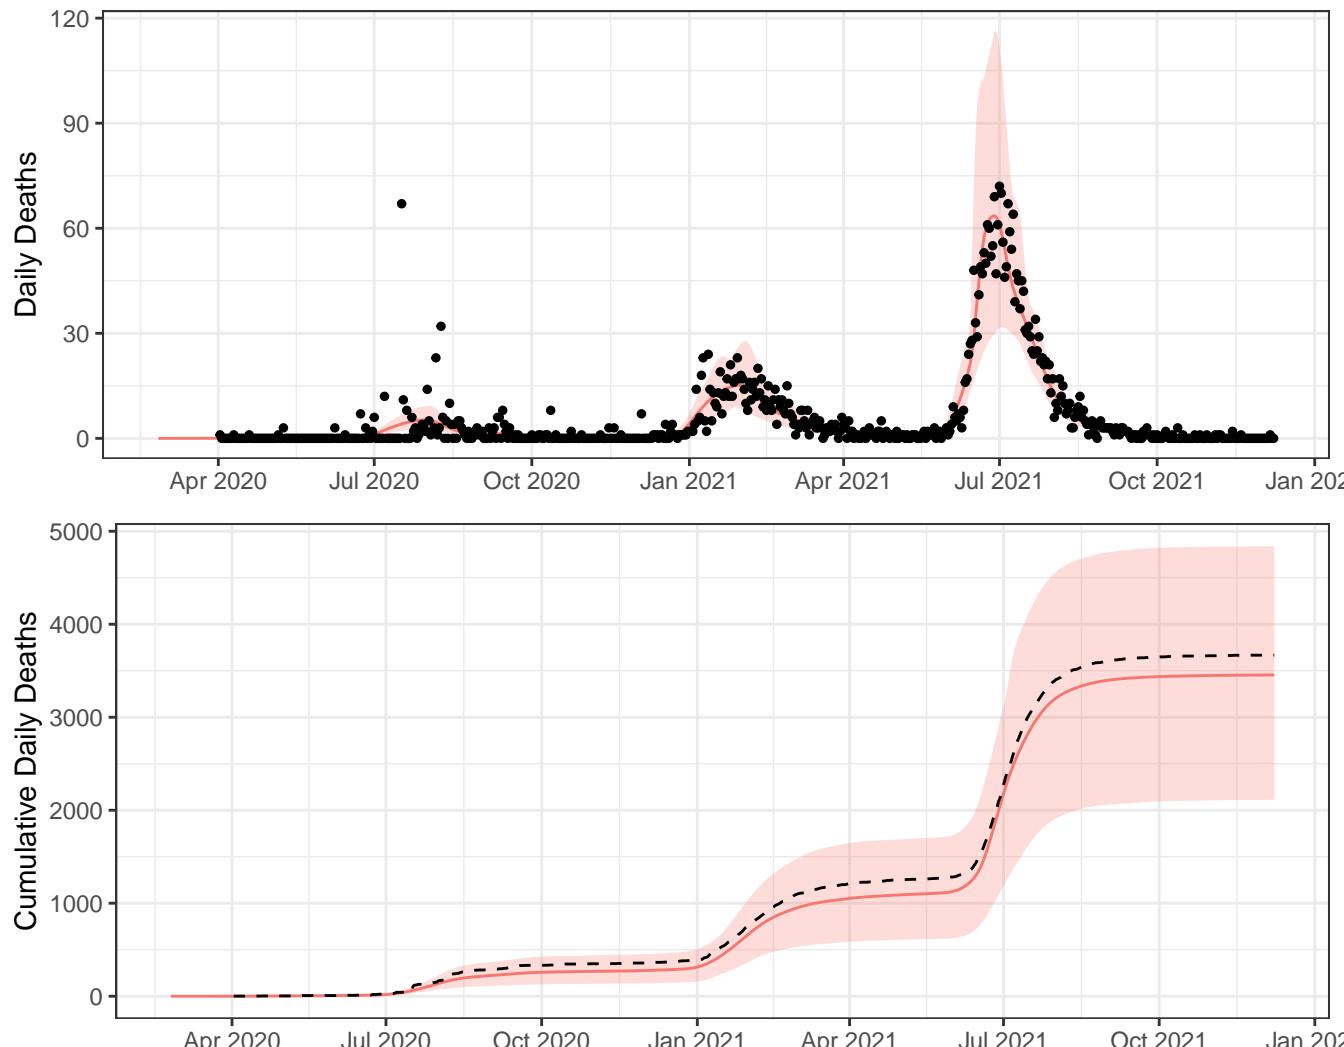

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# South Africa

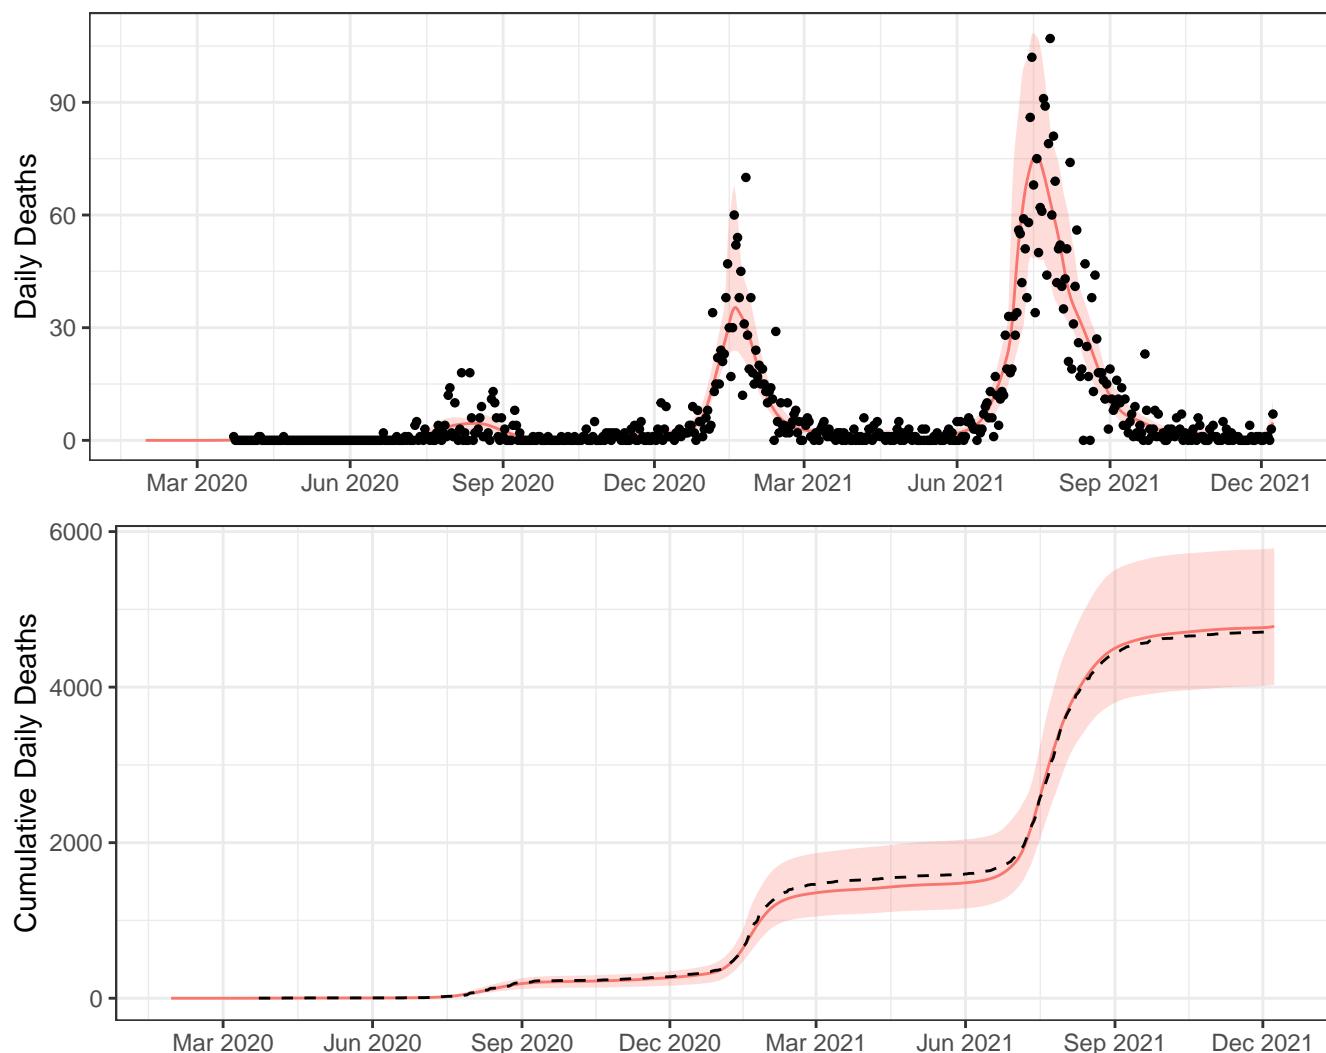

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Zambia

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.

# Zimbabwe

Daily deaths are included with reported COVID-19 deaths shown as points. The red line represents median model estimates of daily deaths, and the shaded region represents the 95% quantiles of the model estimated deaths. Plots of the cumulative estimated deaths are also shown, with the cumulative number of reported deaths represented by a dashed black line.
